Fashion Design Tech — Class 9 Solved Exercises (PCTB)

Class 9 — Solved Exercises

Punjab Curriculum and Textbook Board (PCTB)

9 chapters — 211 exercises

Chapter 1: Introduction to Fashion Designing

Exercise — A. Multiple Choice Questions

1. What is the main purpose of fashion in society?

(a) to make people dress the same

(b) to follow strict rules

(c) to sell expensive clothes

(d) to show culture and identity ✓

Correct answer: to show culture and identity

Exercise — A. Multiple Choice Questions

2. Which factor does not influence fashion?

(a) weather and geography

(b) social and cultural trends

(c) the number of shopping malls ✓

(d) technology

Correct answer: the number of shopping malls

Exercise — A. Multiple Choice Questions

3. How does fashion help the economy?

(a) no impact on the economy

(b) creates jobs in design and retail ✓

(c) only benefits rich designers

(d) only affects celebrities

Correct answer: creates jobs in design and retail

Exercise — A. Multiple Choice Questions

4. How do celebrities and social media affect fashion?

(a) make trends popular faster ✓

(b) do not impact fashion at all

(c) stop people from buying

(d) promote expensive clothes

Correct answer: make trends popular faster

Exercise — A. Multiple Choice Questions

5. Why is traditional clothing like the shalwar kameez important?

(a) it represents culture and heritage ✓

(b) it is only worn by older people

(c) it is outdated and not used anymore

(d) it is only for festivals

Correct answer: it represents culture and heritage

Exercise — A. Multiple Choice Questions

6. How does fashion connect to history?

(a) does not change over time

(b) reflects past and social changes ✓

(c) only about personal choice

(d) only focuses on the future

Correct answer: reflects past and social changes

Exercise — A. Multiple Choice Questions

7. Which category of fashion focuses on high-end, premium clothing?

(a) fast Fashion

(b) haute Couture ✓

(c) streetwear

(d) athleisure

Correct answer: haute Couture

Exercise — A. Multiple Choice Questions

8. Which of the following describes 'fast fashion'?

(a) no impact on the economy

(b) widespread accessibility

(c) only benefits rich designers

(d) focuses only on traditional wear

Correct answer: widespread accessibility

Exercise — A. Multiple Choice Questions

9. What is the significance of colour in fashion?

(a) It has no effect on emotions

(b) Colours influence mood and perception

(c) Designers randomly pick colours without meaning

(d) Fashion only uses neutral colours

Correct answer: Colours influence mood and perception

Exercise — A. Multiple Choice Questions

10. What is the key difference between South Asian and Western fashion?

(a) Western fashion values embroidery, while South Asian fashion prioritizes minimalism

(b) South Asian fashion is tradition-based, while Western fashion follows seasonal collections

(c) Western fashion is heavily embellished, while South Asian fashion is plain

(d) South Asian fashion does not focus on cultural heritage while Western fashion focuses on culture

Correct answer: South Asian fashion is tradition-based, while Western fashion follows seasonal collections

Exercise — B. Short Answer Questions

1. Define fashion and explain how it differs from dress and costume.

Fashion is a trend-driven way of dressing that becomes popular during a specific time, place or cultural moment and reflects the collective preferences of a social group. Dress is any clothing worn by an individual, regardless of trends, serving functional and aesthetic purposes. Costume is clothing that represents a specific era, cultural identity or occasion, such as traditional attire, theatrical outfits or historical re-enactment clothing.

Exercise — B. Short Answer Questions

2. What are some factors that influence fashion trends?

Fashion trends are influenced by seasonal fashion trends (Spring/Summer and Fall/Winter collections), cultural and social influences, economic conditions, historical and artistic movements, demographic shifts such as age and lifestyle, art and literature, climate and geography, and media and entertainment including films, social media and celebrity endorsements.

Exercise — B. Short Answer Questions

3. What are the key categories of garments for men, women, and children?

Menswear includes pants, shirts, blazers, three-piece suits, shalwar kameez, waistcoats and sherwanis. Womenswear includes dresses, skirts, pants, blouses, lehengas, shalwar kameez, tunics, abayas and evening wear. Children's wear features frocks, shirts, pants, skirts, dungarees, rompers and traditional outfits like miniature versions of adult ethnic wear.

Exercise — B. Short Answer Questions

4. Describe two differences between South Asian and Western fashion.

First, South Asian fashion values heritage and artistry, with intricate handwork,

embroidery and textile techniques passed down through generations, while Western fashion prioritizes functionality, individuality and seasonal adaptability. Second, South Asian fashion is largely occasion-driven and balances modesty with elegance, whereas Western fashion embraces minimal design with clean lines and neutral colour palettes and is dominated by ready-to-wear and fast fashion.

Exercise — B. Short Answer Questions

5. Explain the role of fashion designers in shaping modern society.

Fashion designers are problem-solvers who blend imagination with function. They anticipate change, design solutions for aesthetic, physical and emotional needs, and present their collections through fashion shows, shaping industry movements and consumer preferences. Designers also act as agents of change, using their creativity to address social and environmental challenges, for example through sustainable fashion.

Exercise — B. Short Answer Questions

6. What are the two main seasonal collections in Western fashion?

The two main seasonal collections in Western fashion are the Spring/Summer collection and the Fall/Winter collection, through which new styles are introduced at fashion weeks in Paris, Milan, London and New York.

Exercise — B. Short Answer Questions

7. What does SDG stand for?

SDG stands for Sustainable Development Goals. These are the United Nations goals launched in 2015 to promote sustainability in all aspects of life, including fashion, aiming for a greener and fairer world by 2030.

Exercise — B. Short Answer Questions

8. What are some career opportunities available in the fashion industry?

In design production: fashion designer, textile designer, pattern cutter, print designer, production manager, sample maker and sewing expert. In business and marketing: fashion buyer, merchandiser, brand manager, fashion marketer, public relations specialist and show producer. In creative media: stylist, journalist, blogger, photographer and visual merchandiser. There are also roles in academia, such as educator, museum curator and historian, and in sustainability, such as sustainable fashion expert.

Exercise — B. Short Answer Questions

9. How do climate and geography influence fabric choices in different regions?

Climate dictates fabric choices and styling. Warm regions favour breathable fabrics like cotton, while colder climates require woolen and warm clothing. For example, the cold mountainous climate of Gilgit-Baltistan favours woolen shawls and handwoven textiles, while designers everywhere choose colours and fabrics suited to the local climate and occasion.

Exercise — B. Short Answer Questions

10. How does clothing in different parts of Pakistan represent the history and identity of its people?

Each region of Pakistan contributes distinct clothing that reflects its history and values. Punjab is known for vibrant colours, intricate embroidery, shalwar kameez, phulkari embroidery and turbans. Sindh is recognized for ajrak prints, mirror work and the Sindhi topi. Khyber Pakhtunkhwa is known for heavy embroidery, the Pakol cap and Peshawari chappals. Balochistan is distinct for heavily embroidered long dresses and silver jewellery. Gilgit-Baltistan favours woolen shawls and handwoven textiles, and Kashmir is known for luxurious

Pashmina shawls and the phiran. Together they blend tradition with contemporary trends into a unique national style.

Exercise — C. Comprehensive Questions

1. The rise of social media has changed the way fashion trends spread. How do these platforms influence what people wear?

Social media, films, television and celebrity endorsements drive fashion trends, and influencers and digital platforms amplify them, creating instant global appeal. Trends therefore reach people faster than before, celebrities and influencers make new styles popular quickly, and consumers adopt looks they see online, so what people wear is increasingly shaped by what is trending on digital platforms.

Exercise — C. Comprehensive Questions

2. How do the clothes people wear reflect their personality or lifestyle?

Fashion is a powerful form of self-expression that allows individuals to showcase their personalities, beliefs and aspirations through clothing. What one person finds stylish may differ from another's view, because fashion is based on individual preferences, experiences and interpretations. For some it is about keeping up with trends, while for others it prioritizes comfort and practicality, and its meaning evolves with age, lifestyle and cultural exposure.

Exercise — C. Comprehensive Questions

3. How does clothing in different parts of Pakistan represent the history and identity of its people?

Pakistan's diverse cultural heritage significantly impacts its fashion, with each province and region adding distinct elements. Punjab contributes vibrant colours and phulkari embroidery, Sindh ajrak and mirror work, Khyber Pakhtunkhwa

heavy embroidery and the Pakol cap, Balochistan heavily embroidered dresses with silver jewellery, Gilgit-Baltistan woolen shawls and handwoven textiles, and Kashmir Pashmina shawls and fine embroidery. Festivals, rituals and social customs also influence attire, so regional clothing showcases the rich craftsmanship and cultural heritage of South Asia and reflects each community's history and identity.

Chapter 2: Elements of Design

Exercise — A. Multiple Choice Questions

1. Which of the following is NOT an element of design?

(a) line

(b) shape

(c) formula ✓

(d) texture

Correct answer: formula

Exercise — A. Multiple Choice Questions

2. What is a line?

(a) a part of texture

(b) a continuous mark connecting two points ✓

(c) a type of color scheme

(d) a three-dimensional object

Correct answer: a continuous mark connecting two points

Exercise — A. Multiple Choice Questions

3. Which type of line creates a sense of movement and energy?

(a) straight line

(b) curved line

(c) zig-zag line ✓

(d) parallel line

Correct answer: zig-zag line

Exercise — A. Multiple Choice Questions

4. Which type of shape is created using precise mathematical measurements?

(a) geometric shape ✓

(b) organic shape

(c) abstract shape

(d) freehand shape

Correct answer: geometric shape

Exercise — A. Multiple Choice Questions

5. Which element of design gives an object a three-dimensional look?

(a) shape

(b) line

(c) form ✓

(d) colour

Correct answer: form

Exercise — A. Multiple Choice Questions

6. Which of the following is an example of Primary colour?

(a) red ✓

(b) green

(c) yellow

(d) blue

Correct answer: red

Exercise — A. Multiple Choice Questions

7. Which of the following is an example of Secondary colour?

(a) red

(b) green ✓

(c) yellow

(d) blue

Correct answer: green

Exercise — A. Multiple Choice Questions

8. Which of the following is an example of Tertiary colour?

(a) red

(b) green

(c) yellow

(d) red-violet ✓

Correct answer: red-violet

Exercise — A. Multiple Choice Questions

9. Which of the following is an example of Silhouette?

(a) a line

(b) line

(c) form

(d) shape ✓

Correct answer: shape

Exercise — A. Multiple Choice Questions

10. Hue refers to which color family?

(a) red, blue, green

(b) red, blue, yellow ✓

(c) red, blue, purple

(d) red, blue, pink

Correct answer: red, blue, yellow

Exercise — Notes on Questions 6 and 9

Why are Questions 6 and 9 marked this way?

Note on Question 6: the chapter (section 2.7.1) states that red, blue and yellow are ALL primary colours, so options (a) red, (c) yellow and (d) blue are all

primary; (a) red is marked as the first of them. Note on Question 9: the book prints options (a) and (b) identically as 'a line' and 'line'; the silhouette is the overall shape or outline of a garment, so (d) shape is marked.

Exercise — B. Short Answer Questions

1. What are the basic elements of design?

The basic elements of design are line, shape, form, space, texture and colour. The chapter also discusses value, the lightness or darkness of a colour, as a related element shown in Figure 2.1.

Exercise — B. Short Answer Questions

2. Define line and mention three types of lines.

A line is an essential element of design, mostly used in drawings and writings, which structures a composition and guides the viewer's eye; every line has a specific direction, thickness and rhythm. Three types are: the straight line, a continuous line extending in one direction without curving; the curved line, a flowing, bending line that creates a sense of movement and softness; and the zig-zag line, a series of connected diagonal lines that change direction sharply, creating a dynamic and energetic effect.

Exercise — B. Short Answer Questions

3. Give an example of an organic shape and a geometric shape.

An organic shape is free-form, fluid and irregular, for example a leaf-like or flower-like blob shape, which adds a sense of freedom or natural flow. A geometric shape is precise and mathematical, for example a circle, square, triangle or rectangle, often seen in more structured designs and giving a sense of order.

Exercise — B. Short Answer Questions

4. What is the difference between shape and form?

Shape is a two-dimensional area created by a boundary or lines, having only height and width, and it can be geometric or organic. Form is the three-dimensional structure or shape of an object, including its length, width and depth, which gives the object volume and makes it appear solid and concrete. In short, shape is flat while form adds depth.

Exercise — B. Short Answer Questions

5. Why is texture important in design?

Texture is important because it refers to the surface of an object or material and adds depth, interest and physical appeal to garments. A simple garment can become more exciting and sophisticated with the right combination of textures, such as pairing silk with leather or denim with lace. Texture also influences the mood of a design and the function of a garment, not just its appearance.

Exercise — B. Short Answer Questions

6. Describe texture and its two main types.

Texture is the surface quality of an object or material. Its two main types are actual (tactile) texture, the real surface feel of a fabric such as the smoothness of silk or the roughness of denim, which can be felt by touch; and visual (implied) texture, a surface effect that only looks textured, such as a printed pattern that appears rough or soft but feels flat. Both types add depth and interest to a design.

Exercise — B. Short Answer Questions

7. What is the role of Hue and Saturation in colour?

Hue is the colour family itself, like red, blue or yellow; it is the most basic and

recognizable aspect of colour. Saturation is the vibrancy or purity of a colour: a highly saturated colour is bold and intense, while a de-saturated colour appears more muted or grayish. Together they let a designer choose both which colour and how strong it appears.

Exercise — B. Short Answer Questions

8. What are the primary colours, and why are they important?

The primary colours are red, blue and yellow. They are important because they are the base colours that cannot be created by mixing other colours, and by mixing primary colours in different combinations we get secondary and tertiary colours, so the whole colour wheel is built from them.

Exercise — B. Short Answer Questions

9. What is the role of colour in design?

Colour is one of the most powerful and expressive elements in design. It influences how we perceive and interact with visual compositions, affects emotions and mood, creates harmony and draws attention to certain elements. For example, colours in clothing can affect emotions: red is often linked to confidence and power, blue gives a sense of calm, and green is considered peaceful, which is why designers carefully choose colours for different occasions.

Exercise — B. Short Answer Questions

10. What is a silhouette in fashion design?

In fashion design, a silhouette is the overall shape or outline of a garment on the body. It is influenced by proportion, line and shape, determines how a piece of clothing fits and flows around the body, and conveys different moods, from structured and formal to fluid and casual. Common types are the A-line (fitted at the top and gradually flaring out), the sheath (straight and close-fitting) and the

empire line (high waistline, flowing below the bust).

Exercise — C. Comprehensive Questions

1. What are the fundamental elements of design, and how do they contribute to visual composition?

The fundamental elements of design are line, shape, form, space, texture, colour and value. Line structures a composition and guides the eye; shape creates two-dimensional areas that build structure and convey meaning; form adds depth and volume; space, the area around, between or within objects, makes a design feel open or compact; texture adds surface interest and mood; colour affects emotion, harmony and attention; and value, the lightness or darkness of a colour, adds contrast and depth. Together they are the building blocks from which every visual composition is made.

Exercise — C. Comprehensive Questions

2. How do line, shape, form, colour, texture, space, and value interact to create a balanced design?

A balanced design uses the elements together rather than alone. Lines direct the eye and set rhythm and movement; shapes organize the composition into structured or fluid areas; form gives objects volume and solidity; colour sets mood and draws attention through hue, saturation and value; texture adds physical appeal and feeling; space separates and defines objects so the design feels open or compact; and value creates contrast between light and dark. When no element overpowers the others, the garment looks unified, readable and aesthetically pleasing.

Exercise — C. Comprehensive Questions

3. What are some real-world examples of designs that showcase an innovative

use of the elements of design?

Real-world examples include garments that pair contrasting textures, such as silk with leather or denim with lace, to make a simple garment more exciting and sophisticated; designs using digital fashion, AI-designed clothing and 3D-printed outfits, which change how clothes are made; and collections presented on live models, a practice begun by Charles Frederick Worth, the first modern fashion designer, which shows how line, shape, silhouette and colour work together on the body. In each case the elements are chosen deliberately: line and silhouette define the outline, colour sets the mood, and texture and space give the design depth and balance.

Chapter 3: Principles of Design

Exercise — A. Multiple Choice Questions

1. Which principle of design creates visual interest by using opposing elements like colour, texture, or shape?

(a) harmony

(b) contrast ✓

(c) repetition

(d) proportion

Correct answer: contrast

Exercise — A. Multiple Choice Questions

2. What principle of design guides the viewer's eye through a composition?

(a) scale

(b) balance

(c) movement ✓

(d) proportion

Correct answer: movement

Exercise — A. Multiple Choice Questions

3. The relative size of elements in a composition refers to which principle?

(a) scale ✓

(b) rhythm

(c) contrast

(d) balance

Correct answer: scale

Exercise — A. Multiple Choice Questions

4. How does proportion influence design?

(a) by maintaining unity between different elements

(b) by making one element more noticeable than others

(c) by establishing size relationships among design components ✓

(d) by creating repetition within the design

Correct answer: by establishing size relationships among design components

Exercise — A. Multiple Choice Questions

5. What principle ensures all elements in a design work together cohesively?

(a) contrast

(b) harmony ✓

(c) movement

(d) scale

Correct answer: harmony

Exercise — A. Multiple Choice Questions

6. Repetition in design is primarily used to:

(a) create randomness

(b) add chaos to the composition

(c) maintain structure ✓

(d) increase contrast

Correct answer: maintain structure

Exercise — A. Multiple Choice Questions

7. Rhythm in design creates a sense of:

(a) stability

(b) movement and flow ✓

(c) randomness

(d) proportion

Correct answer: movement and flow

Exercise — A. Multiple Choice Questions

8. Which principle of design is often seen in graphic patterns?

(a) contrast

(b) repetition ✓

(c) balance

(d) movement

Correct answer: repetition

Exercise — A. Multiple Choice Questions

9. How many types of rhythm exists?

(a) 3

(b) 4

(c) 2 ✓

(d) 6

Correct answer: 2

Exercise — A. Multiple Choice Questions

10. What does scale refer to?

(a) size ✓

(b) proportion

(c) shape

(d) height

Correct answer: size

Exercise — B. Short Answer Questions

1. What is the role of harmony and space in design?

Harmony is the arrangement of elements that work together to create a sense of cohesion and unity, so different components complement rather than clash with each other and the design looks visually appealing and well-balanced. Space supports harmony by separating and defining elements: proper use of space can make a design feel open or compact, and when elements have room to breathe, their relationships stay clear and the composition feels ordered and stable rather than crowded or chaotic.

Exercise — B. Short Answer Questions

2. How many types of harmony are mentioned in the chapter?

Six aspects of harmony are mentioned in the chapter: (1) consistency in elements, (2) balance between variety and uniformity, (3) colour and shape, (4) texture and material, (5) proportional harmony, and (6) graphic harmony.

Exercise — B. Short Answer Questions

3. What is the role of contrast in design?

Contrast is produced when two or more visual elements in a composition are different, and these differences make various elements stand out. Colour contrast occurs when two or more colours are placed together to create distinction: high contrast makes elements stand out, while low contrast results in a more refined, harmonious effect. Contrast in size emphasizes the difference between elements and guides the viewer's eye towards focal points.

Exercise — B. Short Answer Questions

4. Give an example of contrast used in fashion design.

An example of contrast in fashion design is pairing a black garment panel with a bright red circular motif, as in the chapter's contrast figure, where the opposite colours make each element stand out. Other examples are using different

shapes together to break repetition and monotony, or placing a large element beside a small one so the size difference draws the eye to a focal point.

Exercise — B. Short Answer Questions

5. How does movement influence a composition?

Movement can be implied through lines, shapes, colour and contrasts, making the composition dynamic and engaging. It creates a sense of direction, rhythm and energy, guiding the observer across different elements of a design, and it is also used to show physical action on a still image.

Exercise — B. Short Answer Questions

6. How do harmony and contrast work together in a design?

Harmony and contrast work together as partners: harmony ensures that the different components of a composition complement each other and create cohesion and unity, while contrast introduces differences that make individual elements stand out. Used together, contrast prevents a harmonious design from becoming dull or monotonous, and harmony prevents strong contrasts from becoming chaotic, so the design is both interesting and unified. The chapter notes that low contrast itself results in a more refined, harmonious effect.

Exercise — B. Short Answer Questions

7. Define scale in the context of design.

Scale refers to the size of an object in relation to a standard or familiar reference. For example, a garment element looks large or small only by comparison with a known reference, such as the human body or a neighbouring element, and choosing the right scale keeps the design believable and visually balanced.

Exercise — B. Short Answer Questions

8. Define rhythm and its types.

Rhythm creates a sense of movement within a garment by strategically arranging repeating elements, such as pleats, ruffles or layered fabrics, and this movement guides the viewer's eye. The chapter names two types: random rhythm, repeating elements without any regular intervals; and regular rhythm, when the elements are of a similar size and length and spread out over expected intervals.

Exercise — B. Short Answer Questions

9. How does proportion affect the relationship between design elements?

Proportion is the relationship between elements within a design, and proportional harmony is the balanced relationship between different parts of a design in terms of size, scale and visual weight. When proportions are right, all elements work together, with neither overpowering nor weakening each other, so the design feels balanced; when they are wrong, one part dominates and the composition feels awkward or unstable.

Exercise — B. Short Answer Questions

10. How can repetition enhance a design?

Repetition can be done by repeating the same colours, shapes or other elements of a design. It enhances a design by creating unity, rhythm and structure: the repeated element ties different parts together, builds a recognizable pattern or motif (as in graphic patterns), and makes the composition feel intentional and cohesive rather than random.

Exercise — C. Comprehensive Questions

1. Discuss the seven principles of design in detail with examples.

The seven principles discussed in the chapter are harmony, contrast, repetition, rhythm, movement and scale/proportion (listed as six headings, with scale and proportion counted as two principles). Harmony arranges elements so they work together cohesively, for example a consistent colour palette, shapes and textures. Contrast uses opposing elements, like colour, texture or shape, to make elements stand out. Repetition repeats the same colours, shapes or motifs to create unity and pattern. Rhythm arranges repeating elements, such as pleats or ruffles, to create movement and guide the eye. Movement, implied through lines, shapes, colour and contrasts, makes a composition dynamic. Scale is the size of an object relative to a standard reference, and proportion is the relationship between elements within a design; together they ensure visual balance and harmony.

Exercise — C. Comprehensive Questions

2. What are the different types of balance (symmetrical, asymmetrical), and how do they influence a design's composition?

Balance is the equilibrium of visual weight in a composition. Symmetrical balance places identical or mirror-image elements on both sides of a central axis, giving a formal, stable and orderly feeling. Asymmetrical balance uses different elements on each side, balanced by their size, colour, texture and visual weight, giving a more dynamic, informal and interesting feeling. The chapter frames balance through harmony: variety adds interest, but too much variety can create chaos, so harmony ensures variety does not overwhelm the design and creates a balance between the design and its components. A balanced composition feels stable and complete, while an unbalanced one feels awkward or as if it might tip over.

Exercise — C. Comprehensive Questions

3. What is harmony in design, and how can it be achieved in fashion?

Harmony in design is the arrangement of elements that work together to create cohesion and unity, ensuring components complement rather than clash with each other. In fashion it can be achieved by using a consistent colour palette, shapes, textures and proportions; by balancing variety with uniformity so interest does not become chaos; by choosing colours that complement each other through colour schemes; by planned selection and combination of textures and materials; by keeping proportional relationships balanced in size, scale and visual weight; and by graphic harmony, the balanced and consistent arrangement of visual elements such as colours, fonts, images, shapes and textures so all components work easily together.

Chapter 4: Historical Aspects of Fashion Design

Exercise — A. Multiple Choice Questions

1. Which of the following is NOT a city of Indus Valley Civilization?

(a) Harappa

(b) Mohenjo-Daro

(c) Mehrgarh

(d) Egypt ✓

Correct answer: Egypt

Exercise — A. Multiple Choice Questions

2. What is a Tunic?

(a) bracelet

(b) ring

(c) headgear

(d) long skirt ✓

Correct answer: long skirt

Exercise — A. Multiple Choice Questions

3. Which type of jewelry was worn in the Mehrgarh period?

(a) anklets and Bracelets ✓

(b) nath

(c) nose pins

(d) brooches

Correct answer: anklets and Bracelets

Exercise — A. Multiple Choice Questions

4. What are the type of shapes made on the tunic of the priest king?

(a) trefoil shapes ✓

(b) triangular shapes

(c) abstract shapes

(d) cuboids

Correct answer: trefoil shapes

Exercise — A. Multiple Choice Questions

5. What kind of dresses were worn by the females of Indus valley Civilization?

(a) shirt and Trousers

(b) cloaks, skirts and scarfs ✓

(c) ball Gowns

(d) blouses

Correct answer: cloaks, skirts and scarfs

Exercise — A. Multiple Choice Questions

6. Which Sewing tool was used for stitching garments in The Mehrgarh period?

(a) bone needles ✓

(b) sewing machines

(c) axes

(d) weaving machines

Correct answer: bone needles

Exercise — A. Multiple Choice Questions

7. What materials were mainly used to make garments in the Indus Valley Civilization?

(a) synthetic

(b) jacquard

(c) cotton ✓

(d) acrylic

Correct answer: cotton

Exercise — A. Multiple Choice Questions

8. Who discovered Indus Valley Civilization during a digging process in 1921-22?

(a) Al-Razi

(b) Thomas Edison

(c) Sir John Hubert Marshall ✓

(d) Einstein

Correct answer: Sir John Hubert Marshall

Exercise — A. Multiple Choice Questions

9. What was the basic source of survival for the people of Indus valley civilization?

(a) agriculture ✓

(b) trade

(c) mine crafting

(d) lack magic

Correct answer: agriculture

Exercise — A. Multiple Choice Questions

10. What kind of headdresses they used to wear?

(a) large and decorative ✓

(b) small and delicate

(c) soft and luxurious

(d) none of the above

Correct answer: large and decorative

Exercise — Note on Questions 2 and 5

Why are Questions 2 and 5 marked this way?

Note: the chapter does not define the word 'tunic' and does not specify female dress types in section 4.6; Question 2 is marked (d) because it is the only garment among the options, and Question 5 is marked (b) because cloaks, skirts and scarves match the chapter's draped-cotton tradition. These two marks are best-fit answers, not verbatim chapter statements.

Exercise — B. Short Answer Questions

1. What type of garments did the people of the Indus Valley civilization used to wear?

The people of the Indus Valley Civilization mostly wore cotton attires, which were draped around their bodies. The fabric was draped in different styles to create variation, and men and women also wore jewelry like necklaces, bangles and earrings with these draped garments.

Exercise — B. Short Answer Questions

2. What materials were mostly used in the Indus Valley jewelry?

Indus Valley accessories were made of silver, ivory, seashell, clay and semi-precious stones, and the civilization is also described as famous for precious stone jewelry. In the earlier Mehrgarh period, beaded jewelry of different shapes and materials, like lapis lazuli, turquoise and shells, was found.

Exercise — B. Short Answer Questions

3. What kind of jewelry types did they wore with their garments?

With their garments they wore necklaces, bangles and earrings. In the Mehrgarh period the jewelry accessories also included anklets, large headdresses and terracotta bangles, and the famous bronze Dancing Girl sculpture is shown with jewelry ornaments.

Exercise — B. Short Answer Questions

4. How did the costumes of Mehrgarh are different from those of the Indus Valley?

Mehrgarh (7000 BC) is the earlier settlement, where terracotta human figurines adorned with headgear and jewelry show the first evidence of dress, and the earliest cotton sample, bone needles and leather strings suggest early stitching, weaving and dyeing. The later Indus Valley cities of Harappa and Mohenjo-Daro (3300 BC-1300 BC) were well-planned urban centres whose people wore draped cotton garments with dyed fabrics, shown in sculptures like the Priest-King with his trefoil-motif draped robe and the bronze Dancing Girl with jewelry ornaments. So Mehrgarh shows the beginnings of textile craft, while the Indus Valley shows a more developed urban clothing tradition.

Exercise — B. Short Answer Questions

5. What kind of textile materials were in use during the Indus valley civilization?

Cotton was the main textile material: men and women mostly dressed in cotton attires draped around their bodies, the earliest cotton sample was found at Mehrgarh, and dyed fabrics found in a metal jar suggest early signs of textiles. Different fibers have also been traced on the surfaces of certain remains, showing the evidence of textile use.

Exercise — B. Short Answer Questions

6. What signs from Indus Valley sculptures shows that Indus Valley people were fashion conscious?

The sculptures show careful attention to dress and ornament. The Priest-King sculpture from Mohenjo-Daro wears fabric draped on his body with the impression of a trefoil motif; the bronze Dancing Girl wears jewelry ornaments; and Mehrgarh terracotta figurines are adorned with headgear and jewelry,

including necklaces, anklets, large headdresses and terracotta bangles. The variety of draping styles and beaded jewelry of different shapes and materials shows that these people cared about how they looked.

Exercise — B. Short Answer Questions

7. How did the climate effect the clothing of the Indus Valley Civilization?

The climate was mostly warm, so the fabric was light and the clothing style was loose and airy. Because heavy or tight clothing would have been uncomfortable, the fabric was draped in different styles to create variation while keeping the wearer cool.

Exercise — B. Short Answer Questions

8. What accessories are depicted in the Gandhara sculptures?

Gandhara sculptures show statues of men and women wearing jewelry, including necklaces, bracelets, earrings, anklets, rings and bangles, along with carvings of different motifs on the draped fabrics. Male statuettes with draped fabric and different hairstyles are also shown, and the statue of the Buddha is shown wearing a long robe or a half skirt (Dhoti).

Exercise — B. Short Answer Questions

9. Which civilization had its influence on the Gandhara Civilization?

The Gandhara Civilization was a combination of Greco-Roman and Indian cultures. It began in what is now northwestern Pakistan and eastern Afghanistan, and the city of Taxila was its main centre of Buddhist learning and knowledge.

Exercise — B. Short Answer Questions

10. What was the material used for Gandhara sculptures?

Gandhara sculptures were made of stone. The chapter lists Buddhist sculpture

and stone carvings and architecture among the key features of the Gandhara Civilization, and its famous Buddha statue, shown wearing a long draped robe, is a stone sculpture.

Exercise — C. Comprehensive Questions

1. Describe the clothing and jewelry worn by people in the Indus Valley Civilization. What materials were commonly used?

The people of the Indus Valley Civilization mostly dressed in cotton attires draped around their bodies, with the fabric draped in different styles to create variation. Because the climate was mostly warm, the fabric was light and the clothing was loose and airy. They wore jewelry like necklaces, bangles and earrings, and their accessories were made of silver, ivory, seashell, clay and semi-precious stones. The Priest-King sculpture from Mohenjo-Daro shows a draped fabric with a trefoil motif, and the bronze Dancing Girl sculpture shows jewelry ornaments, while dyed fabrics and different fibers traced on remains provide evidence of weaving, dyeing and textile use.

Exercise — C. Comprehensive Questions

2. What similarities and differences can you find between the clothing traditions of Mehrgarh and the Indus Valley Civilization?

Both traditions share draped cotton clothing and a love of jewelry, but they differ in period and development. Mehrgarh (7000-2500 BC) was an early farming and herding settlement in the Kachhi plains of Balochistan, where people grew wheat, barley and cotton, herded sheep and goats, made metal pots, terracotta pottery and mud-brick houses, and buried the dead with possessions like baskets, stone and bone tools and beads. Its terracotta figurines, adorned with headgear and jewelry, and its earliest cotton sample, bone needles and leather strings show the beginnings of stitching, weaving and dyeing. The Indus Valley

cities of Harappa and Mohenjo-Daro (3300 BC-1300 BC) were well-planned urban centres with drainage systems, food storage, communal baths, roads, urban planning and clay seals used for trade, where draped cotton garments, dyed fabrics and precious stone jewelry show a more advanced clothing tradition.

Exercise — C. Comprehensive Questions

3. How did the Gandhara Civilization combine different cultures, and what can we learn about their clothing from their sculptures?

The Gandhara Civilization (1200 BC-800 BC) combined Greco-Roman and Indian cultures in what is now northwestern Pakistan and eastern Afghanistan, with Taxila as its main centre of Buddhist learning. Its art represents people wearing garments like those worn by statues from the Roman Civilization, so from its stone sculptures we learn that people wore draped garments, including the Buddha's long robe or half skirt (Dhoti), and that men and women wore jewelry such as necklaces, bracelets, earrings, anklets, rings and bangles, with different motifs carved on the draped fabrics and different hairstyles shown on male statuettes. The sculptures therefore show a blend of Greek, Roman and Indian dress traditions.

Chapter 5: Crafts of Pakistan

Exercise — A. Multiple Choice Questions

1. What is the meaning of Phulkari?

(a) land of flowers

(b) flower work ✓

(c) a type of color

(d) a part of the flower

Correct answer: flower work

Exercise — A. Multiple Choice Questions

2. Which type of material is used to create traditional ceramic pots in Punjab?

(a) marble

(b) clay ✓

(c) zinc

(d) plastic

Correct answer: clay

Exercise — A. Multiple Choice Questions

3. Which is the best description for the technique of Ajrak?

(a) block printed geometric shapes ✓

(b) tie and die abstract shapes

(c) needlework in floral shapes

(d) freehand drawing

Correct answer: block printed geometric shapes

Exercise — A. Multiple Choice Questions

4. Which region is Sindh is famous for wooden handicrafts, textiles, paintings, and handmade paper products?

(a) Hyderabad

(b) Karachi

(c) Gothki

(d) Hala ✓

Correct answer: Hala

Exercise — A. Multiple Choice Questions

5. Which of the following technique is frequently practised in Sindh?

(a) crochet

(b) phulkari

(c) ralli work ✓

(d) mica work

Correct answer: ralli work

Exercise — A. Multiple Choice Questions

6. Which colour is leather dyed and embroidered in a delicate chain stitch for the making of Footwear?

(a) dark-red or brown ✓

(b) green

(c) yellow

(d) blue

Correct answer: dark-red or brown

Exercise — A. Multiple Choice Questions

7. Which type of men's garment is worn in winters of Gilgit Baltistan?

(a) chogha ✓

(b) dhoti

(c) choli

(d) laacha

Correct answer: chogha

Exercise — A. Multiple Choice Questions

8. What does Pakol represents?

(a) Punjabi turban

(b) Jinnah cap

(c) Sindhi topi

(d) Chitrali cap ✓

Correct answer: Chitrali cap

Exercise — A. Multiple Choice Questions

9. What kind of wood is used for wooden handicrafts in Gilgit Baltistan?

(a) oak wood

(b) walnut wood ✓

(c) mango wood

(d) none of the above

Correct answer: walnut wood

Exercise — A. Multiple Choice Questions

10. The Iragahi cap is made with what kind of ornament?

(a) jewelry piece ✓

(b) a bird form

(c) 3D flower forms

(d) clay Seals

Correct answer: jewelry piece

Exercise — B. Short Answer Questions

1. Define culture and craft.

Culture is the shared heritage, traditions and artistic expression of a people, which their crafts reflect: Pakistani crafts are known for their colours, patterns, techniques, purity and beauty, and they reflect the country's cultural heritage, provincial diversity and artistic excellence. Craft is the skillful creation of objects by hand, often combining artistic expression with functionality. It involves skill in making things by hand, and emotion, effort, time, stories and attachment. Craft is rooted in cultural traditions and is often passed down through generations.

Exercise — B. Short Answer Questions

2. What are the main crafts in the region of Punjab?

The most well-known crafts of Punjab are Gota (Gota Patti or Gota-Kinari work), Phulkari embroidery, traditional footwear such as the Khussa, pottery including clay pottery and blue pottery, and woven textiles such as Khes. Punjab also has tie and dye (bandhani), crochet work and the woodwork of Chiniot.

Exercise — B. Short Answer Questions

3. What type of influences were there on woven textiles in the region of Punjab?

The growth of textiles in Punjab was influenced by easy access to raw material, the available skills of artisans, and an inherent sense of aesthetics and appreciation of beauty. Textile techniques developed over centuries as an integral part of Punjabi culture: Khes, a patterned and bound double weave cloth, evolved centuries ago to meet the need for a cotton blanket, and the best-known Khes comes from Multan, Sargodha and Gumbat, each centre showing its own distinct tradition in design and colour scheme.

Exercise — B. Short Answer Questions

4. What kind of techniques are associated with the region of Sindh province?

Sindh's crafts include Ajrak block-printed fabric, Kaashi (Kashikari) pottery, Soosi (Sussi) textile, the Sindhi Topi (cap), Jhundi furniture, Bandhani tie and dye, and Hyderabadi glasswork bangles. Its techniques also include colourful Sindhi embroidery with mirror work on silk, cotton and velvet, and Ralli, patchwork quilts made by stitching together small fabric pieces in geometric patterns, often in bright colours.

Exercise — B. Short Answer Questions

5. What is the difference between the pottery of Punjab and the Pottery of Sindh?

Punjab pottery is handcrafted using locally available clay, shaped on a potter's wheel and then fired in kilns, with motifs inspired by nature, Islamic geometric patterns and floral designs. Its earthenware serves both utility and decorative purposes, including matkas (water pots), gharas (storage pots) and kulhars (small clay cups for tea or desserts), and its blue pottery, famous in Multan and Lahore, is characterized by striking cobalt blue and turquoise glaze with motifs inspired by Mughal and Persian art. Sindh pottery is centred on Hala, whose artisans manufacture high-quality Kashikari pottery, shaping it in various sizes for vases, plates and large pots; Hala is a popular centre for glazed ceramics, earthenware and terracotta.

Exercise — B. Short Answer Questions

6. What is Kilim?

A Kilim is a flat woven Balochi rug known for its geometric designs, natural dyes and vibrant colours. It is one of the traditional handmade crafts of Balochistan, reflecting the lifestyle of the Balochi people and their connection with nature.

Exercise — B. Short Answer Questions

7. Describe the embroidery types famous in the region of Balochistan.

Balochi embroidery is one of the most intricate embroidery styles in Pakistan, often featuring geometric and floral patterns with vibrant threads and mirror work, commonly seen on dresses, shawls and household textiles. Its stitches include Mosum (Fine Satin Stitch), Chinnuka (Interlacing Stitch), Mai Pusht (Herringbone), Kash (Chain Stitch), Blanket Stitch and Cross Stitch.

Exercise — B. Short Answer Questions

8. What are the popular garments in the area of Khyber Pakhtunkhwa?

The traditional male Pashtun usually wears the Kufi, Peshawari cap or Pakol as traditional headgear. The traditional female dress is a gathered frock called Partug, and women typically wear a solid-colored shalwar and a long shirt, sometimes wearing a burqa over this outfit or a Sadar on their head. Other popular garments are Jumlo, a gathered frock known for its silk embroidery, mostly in mustard, red and white, with fine embroidery on the sleeves and neckline, and the Kalashi Siah-Posh, the elaborate black dresses of the Kalash women with colourful beaded necklines adorned with belts.

Exercise — B. Short Answer Questions

9. What type of cap or headgear is worn by the people of Gilgit Baltistan?

The people of Gilgit-Baltistan wear a woolen cap (Pakol). Men wear a long loose woolen cloak known as Chogha, especially in the colder winter season, along with the woolen Pakol cap. Women wear the traditional Satrangi frock made of colourful embroidery motifs and jewelry pieces, and the Iraghi (Iragahi) cap, an embroidered cap with a jewel piece called Silsila, which is an important part of women's dress and is often worn on special events like weddings.

Exercise — B. Short Answer Questions

10. Describe the main handicrafts of Azad Kashmir.

The main handicrafts of Azad Kashmir are the Pheran, a long woolen robe traditionally worn as local dress (men wear it with a cap named Kandura and women with a scarf known as Kasaba), pure Pashmina shawls made of pure sheep wool, Kashidakari, a local embroidery technique done on these garments with golden and silver threads, and Kashmir carpets made in both wool and silk and influenced by Persian design, known for their designs and craftsmanship. The chapter also lists papier-mache items from jewelry boxes to mirror frames, detailed metal work, carved walnut wooden furniture and accessories, stone jewelry boxes and beautiful woolen shawls.

Exercise — C. Comprehensive Questions

1. How have the traditional crafts of Pakistan evolved, and what historical influences have shaped them?

Pakistan's traditional crafts evolved over centuries, passed down through generations and shaped by the peoples who ruled and lived in each region. Gota work flourished in the Mughal era and is popularly used in edging bridal dresses, with Multan, Bahawalpur and Central Punjab as its centres. The Khussa was adorned with expensive leather, threads and real gemstones and was made for the Mughal kings and royalty. Chiniot woodwork blends Mughal, Persian and indigenous Punjabi influences, and blue pottery carries motifs inspired by Mughal and Persian art. Kashmir carpets are influenced by Persian design, while Gilgit-Baltistan's culture combines Tibetan, Mongolian and Central Asian influences, shown in its floral embroideries, woodwork, textiles, carpet weaving (Gabbeh) and metal work. In this way each craft carries the history of its region.

Exercise — C. Comprehensive Questions

2. How do crafts such as Ajrak, Bandhini, and blue pottery reflect regional identities in Pakistan?

Ajrak is a block-printed fabric with intricate geometric and floral patterns, traditionally made in red, blue and black colours. It is an important cultural symbol of Sindh and is also used as a draped shawl which is an identity and symbol of pride for the locals, so wearing Ajrak immediately marks Sindhi identity. Bandhani (tie and dye) holds a significant place in the traditional textile heritage of Punjab and Sindh: fabric is tied in patterns before being dyed to create vibrant designs, using resist-dyeing techniques on fabrics like malmal (fine muslin), khaddar (handwoven cotton) and silk, and in Sindh the Bandhani technique forms different patterns and designs that give a unique outlook. Blue pottery reflects the identity of Multan and Lahore in Punjab: it is characterized by its striking cobalt blue and turquoise glaze, with vases, tiles, bowls, plates and decorative wall hangings featuring motifs inspired by Mughal and Persian art.

Exercise — C. Comprehensive Questions

3. What are the distinctive features of Baluchistan's embroidery compared to Sindh's Ajrak printing?

Balochistan's embroidery is needlework: Balochi embroidery is one of the most intricate styles in Pakistan, featuring geometric and floral patterns worked with vibrant threads and mirror work on dresses, shawls and household textiles, using named stitches such as Mosum (Fine Satin Stitch), Chinnuka (Interlacing Stitch), Mai Pusht (Herringbone), Kash (Chain Stitch), Blanket Stitch and Cross Stitch. Sindh's Ajrak printing is a printing technique, not embroidery: Ajrak is a block-printed fabric with intricate geometric and floral patterns, traditionally made in red, blue and black colours, and it serves as a cultural symbol of Sindh, used as a draped shawl that is an identity and symbol of pride for the locals. So Balochistan's distinction lies in stitched, mirrored ornament, while Sindh's Ajrak distinction lies in resist/block-printed pattern and colour as a symbol of regional pride.

Chapter 6: Basic Drawing and Anatomy

Exercise — A. Multiple Choice Questions

1. What is the primary purpose of sketching?

(a) detailed art work

(b) capturing ideas ✓

(c) shading focus

(d) digital replacement

Correct answer: capturing ideas

Exercise — A. Multiple Choice Questions

2. In fashion design, what is the term for quick fashion sketches used to visualize garment ideas?

(a) draping

(b) croquis ✓

(c) rendering

(d) blue print

Correct answer: croquis

Exercise — A. Multiple Choice Questions

3. Which of the following is NOT an essential skill needed for drawing?

(a) proportions

(b) anatomy

(c) perspective

(d) coding ✓

Correct answer: coding

Exercise — A. Multiple Choice Questions

4. Why is proportion important in drawing, especially in fashion design?

(a) balance elements ✓

(b) focuses on colour

(c) ensures head size

(d) avoids exaggeration

Correct answer: balance elements

Exercise — A. Multiple Choice Questions

5. What does anatomy help artists achieve?

(a) abstract shapes

(b) realistic figures ✓

(c) garment colours

(d) avoids movement

Correct answer: realistic figures

Exercise — A. Multiple Choice Questions

6. Which perspective uses a single vanishing point?

(a) one point ✓

(b) two point

(c) three point

(d) multi point

Correct answer: one point

Exercise — A. Multiple Choice Questions

7. What does composition refer to?

(a) mixing colours

(b) arranging elements ✓

(c) studying 3d

(d) human anatomy

Correct answer: arranging elements

Exercise — A. Multiple Choice Questions

8. What is gesture drawing used for?

(a) capturing movement ✓

(b) realistic portraits

(c) replacing perspective

(d) mixing colours

Correct answer: capturing movement

Exercise — A. Multiple Choice Questions

9. What is the purpose of basic shapes?

(a) add colour

(b) build structure ✓

(c) replace perspective

(d) create abstract

Correct answer: build structure

Exercise — A. Multiple Choice Questions

10. Why is object drawing important?

(a) draws figures

(b) observes textures ✓

(c) replaces perspectives

(d) focuses on black and white

Correct answer: observes textures

Exercise — B. Short Answer Questions

1. What is sketching?

Sketching is a drawing technique used to quickly capture ideas, observations or concepts. It is often done with simple tools like pencils, charcoal or ink and focuses on rough outlines rather than detailed or finished artwork.

Exercise — B. Short Answer Questions

2. What are the basic steps of drawing?

The basic steps of learning to draw are: observe the subject carefully, practise quick sketches and form drawing, learn controlled pencil movement, and use memory drawing. The essential skills to develop along the way are proportions, anatomy, perspective, composition, lighting, colours, gesture, style and concept.

Exercise — B. Short Answer Questions

3. What are the different types of lines used in drawing?

Basic line drawing uses simple lines to define shapes, contours and forms. The lines used are straight lines, curved lines and lines of varying thickness, and the chapter practises line quality, shading with lines and expressive line drawing.

Exercise — B. Short Answer Questions

4. Why are basic shapes important in drawing?

Basic shapes are important because they are simple geometric forms that serve as the building blocks for more complex compositions. Shape defines the basic outline and structure of an object, giving it clarity and identity, and form adds depth and dimension, making the object appear three-dimensional and realistic. Together they enable artists to represent the world more effectively, giving their work structure, balance and a sense of space.

Exercise — B. Short Answer Questions

5. Name three basic geometric shapes used in drawing.

Three basic geometric shapes used in drawing are the circle, a round shape used for smooth, continuous curves; the square, a shape with four equal sides and right angles; and the triangle, a three-sided shape with varying angles. The chapter also uses the rectangle, a shape with four right angles but unequal sides.

Exercise — B. Short Answer Questions

6. How can a circle be transformed into a sphere?

A circle is turned into a sphere by giving it form: the sphere is the form of a circle, just as the cube is the form of a square, the cylinder the form of a rectangle and the cone the form of a triangle. The chapter shows the construction of a sphere from a basic circle shape to a three-dimensional shape by following shadow, light and texture, so shading and light make the flat circle appear round and solid.

Exercise — B. Short Answer Questions

7. What is object drawing?

Object drawing is the practice of drawing specific physical objects, focusing on their details, proportions, texture and form, and it involves observing the object closely. Examples given in the chapter are an apple (focusing on shape, texture and volume), a vase (highlighting contours and reflections), a chair (capturing structure and perspective), a book (depicting texture and light/shadow play) and a glass of water (observing transparency and refraction).

Exercise — B. Short Answer Questions

8. Why is proportion important in object drawing?

Proportion in drawing refers to the relationship between the sizes of different parts of an object or figure. It is important because it ensures that elements are

accurately scaled and balanced, making drawings appear realistic and harmonious. In fashion design, proportion plays a crucial role in creating well-balanced sketches and helps designers represent garments realistically on the human form, ensuring that clothing details such as seams, patterns and accessories are placed correctly.

Exercise — B. Short Answer Questions

9. Describe the role of perspective in drawing and list the three types discussed in the chapter.

Perspective in drawing is a technique used to create three-dimensionality on a flat surface, helping artists represent objects, figures and spaces realistically by depicting how they appear to the eye based on their distance and angle. The three types discussed in the chapter are one-point perspective, when all lines converge toward a single vanishing point on the horizon, commonly used in simple interior or road drawings; two-point perspective, which involves two vanishing points, often used for drawing buildings and objects at an angle; and three-point perspective, used for extreme viewpoints such as looking up at a tall building or down from a high position, incorporating a third vanishing point.

Exercise — B. Short Answer Questions

10. Name the shading techniques that are covered in the chapter.

The shading techniques covered in the chapter are hatching, cross-hatching and stippling, used for shading and texture. The chapter also practises shading with lines, and uses light and shadow to define forms and create depth, adding realism, mood and contrast to a drawing.

Exercise — C. Comprehensive Questions

1. What is sketching, and why is it important for developing new design ideas?

Sketching is a drawing technique used to quickly capture ideas, observations or concepts, done with simple tools like pencils, charcoal or ink and focusing on rough outlines rather than detailed or finished artwork. It is important for developing new design ideas because sketching is widely used to brainstorm and refine ideas, and in fashion design it is an essential part of the creative process: designers use quick fashion sketches, known as croquis, to visualize garment ideas, experiment with different silhouettes and explore fabric drapes, so sketching helps in developing new designs before moving on to detailed illustrations.

Exercise — C. Comprehensive Questions

2. What does 'proportion' mean in drawing, and how does it make a drawing look realistic?

Proportion in drawing means the relationship between the sizes of different parts of an object or figure. It makes a drawing look realistic because it ensures that elements are accurately scaled and balanced, so the drawing appears realistic and harmonious rather than distorted. In fashion design, proportion is crucial for well-balanced sketches: fashion figures are often drawn with exaggerated proportions, such as elongated legs, to emphasize elegance and style, but understanding true proportion still helps designers represent garments realistically on the human form and place seams, patterns and accessories correctly.

Exercise — C. Comprehensive Questions

3. How does using perspective create a sense of depth in a drawing, and what are the different types of perspective?

Perspective creates a sense of depth by showing how objects, figures and spaces appear to the eye based on their distance and angle, so that nearer and farther

parts of a scene are drawn differently on a flat surface and the drawing looks three-dimensional. The three types are one-point perspective, where all lines converge toward a single vanishing point on the horizon, used for simple interiors or roads; two-point perspective, with two vanishing points, used for buildings and objects seen at an angle; and three-point perspective, used for extreme viewpoints such as looking up at a tall building or down from a height, adding a third vanishing point.

Chapter 7: Fashion Drawing and Design Detail

Exercise — A. Multiple Choice Questions

1. What is the main purpose of fashion technical drawing?

(a) to create realistic portraits

(b) to communicate ideas clearly ✓

(c) to focus only on garment colors

(d) to design accessories only

Correct answer: to communicate ideas clearly

Exercise — A. Multiple Choice Questions

2. What does the term 'croquis' refer to in fashion drawing?

(a) a type of garment

(b) a template for fashion figures ✓

(c) a sewing technique

(d) a specific fabric type

Correct answer: a template for fashion figures

Exercise — A. Multiple Choice Questions

3. How many heads tall is a standard fashion croquis?

(a) 6 heads tall

(b) 7.5 heads tall

(c) 9 heads tall ✓

(d) 12 heads tall

Correct answer: 9 heads tall

Exercise — A. Multiple Choice Questions

4. Which element divides the upper and lower torso in figure drawing?

(a) shoulder line

(b) waistline ✓

(c) hip line

(d) neckline

Correct answer: waistline

Exercise — A. Multiple Choice Questions

5. What is the difference between fashion drawing and illustration?

(a) fashion drawing is artistic, while fashion illustration is technical

(b) fashion illustration is more expressive and stylized ✓

(c) fashion drawing does not follow proportions

(d) fashion illustration is only used for marketing

Correct answer: fashion illustration is more expressive and stylized

Exercise — A. Multiple Choice Questions

6. The Peter Pan collar is best known for:

(a) its sharp and pointed shape

(b) its stand-up, stiff look

(c) its rounded and soft edges ✓

(d) its long, folded-back lapels

Correct answer: its rounded and soft edges

Exercise — A. Multiple Choice Questions

7. What is the first step when sketching a fashion croquis?

(a) adding garment details

(b) drawing the body's proportions ✓

(c) colouring the design

(d) shading the figure

Correct answer: drawing the body's proportions

Exercise — A. Multiple Choice Questions

8. Which type of coat has two parallel rows of buttons?

(a) blazer

(b) double-breasted coat ✓

(c) bomber Jacket

(d) single-breasted coat

Correct answer: double-breasted coat

Exercise — A. Multiple Choice Questions

9. Which sleeve is short and covers only the shoulder?

(a) cap sleeve ✓

(b) kimono sleeve

(c) puff sleeve

(d) bell sleeve

Correct answer: cap sleeve

Exercise — A. Multiple Choice Questions

10. Which of the following is NOT a type of collar?

(a) peter-pan collar

(b) sailors collar

(c) flared collar ✓

(d) mandarin collar

Correct answer: flared collar

Exercise — Note on Question 3

Why is Question 3 marked 9 heads tall?

Note: the chapter states that a fashion figure is generally 8-9 heads tall (Figure 7.5 shows a 9-head figure), and that technical templates are based on the

8-head fashion figure. Question 3 is marked (c) 9 heads tall because it is the option within the chapter's 8-9 head range.

Exercise — B. Short Answer Questions

1. What is the purpose of fashion drawing in design?

The purpose of fashion drawing is to draw garments and accessories by visually presenting ideas with correct specification and detail. Its goal is to clearly communicate design ideas, making them understandable whether for production, presentation or marketing, and it helps designers communicate their ideas effectively through sketches and technical drawings.

Exercise — B. Short Answer Questions

2. What is a croquis, and why is it used in fashion design?

A croquis, the basic fashion figure, is a stylized template used to sketch garments with proportions and poses. It is used in fashion design because, unlike realistic human figures, croquis are elongated to emphasize the movement and flow of clothing, so croquis drawing helps designers illustrate their concepts effectively and bring creative visions to life, and to visualize how fabrics, cuts and details interact with the human form.

Exercise — B. Short Answer Questions

3. What is the origin of the word 'croquis'?

The term 'croquis' comes from the French word meaning 'sketch' or 'rough drawing'. Originating in the 19th century, croquis were initially used by French designers to quickly sketch garment ideas before finalizing detailed illustrations, and over time they became essential tools in fashion design, evolving into standardized templates.

Exercise — B. Short Answer Questions

4. How many heads tall is a fashion figure, and why is it elongated?

A fashion figure is generally 8-9 heads tall. It is elongated, unlike a realistic human figure, to emphasize the movement and flow of clothing, so that garments look elegant and their drape and silhouette are shown to best effect. The body is divided into three sections: head to waist (3 heads), waist to knee (3 heads) and knee to feet (3 heads).

Exercise — B. Short Answer Questions

5. Why are proportions important in fashion figure drawing?

Proportions are important because the croquis guides designers in positioning design elements, symmetry and garment fit, and understanding human proportions and key reference lines is essential for correct posture, symmetry and garment fit. Before developing a croquis, students must understand human proportions: the neckline (base of the neck), shoulder line (width of the shoulders), chest line (widest part of the torso), waistline (narrowest part of the torso, dividing upper and lower body), hip line (widest part of the lower body) and centre line (from head to feet, ensuring symmetry).

Exercise — B. Short Answer Questions

6. Name three different neckline styles and describe them.

Three neckline styles are: the V-neck, a neckline shaped like the letter 'V'; the U-neck, a rounded neckline with a deep or shallow curve; and the scoop neck, a deeper, wider U-shaped neckline. Other styles in the chapter are the square neck, forming a square shape; the turtleneck, a high, close-fitting neckline that covers the neck; the boat neck, a wide neckline running from shoulder to shoulder; and the tie-neck, featuring fabric ties that can be fastened into a bow or knot at the front.

Exercise — B. Short Answer Questions

7. What is the function of collar in garment design?

Collars cover the neckline and enhance garment structure. They are part of the fashion details that enhance the aesthetic, functionality and uniqueness of a garment, and different collar types, such as the band collar, mandarin collar, simple shirt collar, Peter-Pan collar, sailors collar, shawl collar, notch collar and cascade collar, give a garment its character and finish around the neck.

Exercise — B. Short Answer Questions

8. What is the purpose of fashion technical drawings?

Fashion technical drawing refers to the detailed specifications, construction methods and technical drawings used to communicate garment design and fit. Fashion technicals are drawn on a technical fashion croquis, and fashion templates are based on the actual proportion of the 8-head fashion figure, with the garment drawn over the technical croquis with the help of a tracing sheet. Its purpose is to communicate ideas clearly for pattern-making and production.

Exercise — B. Short Answer Questions

9. Identify and describe three common sleeve styles.

Three common sleeve styles are: the cap sleeve, short and slightly curved, covering just the shoulder; the puff sleeve, a full, voluminous sleeve that gathers at the shoulder and often tapers at the cuff; and the bell sleeve, which flares out dramatically from the elbow or wrist. Other styles in the chapter are the kimono sleeve, a wide, seamless sleeve extending from the bodice for a relaxed, flowing silhouette; the shirt sleeve with placket and cuff, a tailored sleeve with a buttoned placket and cuff; and the two-piece sleeve, constructed from two fabric panels for a contoured fit, often seen in jackets and tailored garments.

Exercise — B. Short Answer Questions

10. What is the difference between fashion drawing and fashion illustration?

Fashion drawing is a technical representation of clothing, focusing on proportion, construction and garment details; it is precise and often used for pattern-making and production, and fashion drawing is detailed. Fashion illustration is more artistic and expressive: it is used to convey mood, movement and aesthetic appeal, and while fashion drawings are structured and detailed, fashion illustrations are dynamic, often exaggerated and highly stylized to inspire creative direction, and illustration uses quick colouring.

Exercise — C. Comprehensive Questions

1. What is a croquis and why do fashion designers use it?

A croquis is the basic fashion figure, a stylized template used to sketch garments with proportions and poses. Fashion designers use it because it lets them visualize garment ideas quickly, experiment with different silhouettes and explore fabric drapes before finalizing detailed illustrations. Unlike realistic human figures, croquis are elongated to emphasize the movement and flow of clothing, so they help designers illustrate concepts effectively and bring creative visions to life, and standardized croquis templates help designers visualize how fabrics, cuts and details interact with the human form.

Exercise — C. Comprehensive Questions

2. What is the main difference between a detailed fashion drawing and a quick fashion illustration?

A detailed fashion drawing is a technical representation of clothing, focusing on proportion, construction and garment details; it is precise and often used for pattern-making and production, and it communicates the exact specification of a garment. A quick fashion illustration is more artistic and expressive: it conveys

mood, movement and aesthetic appeal, is dynamic, often exaggerated and highly stylized to inspire creative direction, and uses quick colouring rather than full technical detail. In short, the drawing tells the maker exactly what to produce, while the illustration sells the mood and idea.

Exercise — C. Comprehensive Questions

3. Why are details like necklines, sleeves, and collars important in clothing design?

Details like necklines, sleeves and collars are important because fashion illustrations are incomplete without detailed garment components. Fashion details are the design elements that enhance the aesthetic, functionality and uniqueness of a garment, including necklines, sleeves, collars, hems, seams, pleats, ruffles, buttons, embellishments and stitching techniques. The neckline defines the upper frame of a garment and influences its overall aesthetic; sleeves add personality and functionality and influence style and movement; and collars cover the neckline and enhance garment structure. Together these details turn a plain garment shape into a finished, recognizable design.

Chapter 8: Basics of Textiles

Exercise — A. Multiple Choice Questions

1. What is the primary source of cotton fiber?

(a) plant ✓

(b) wool sheep

(c) silkworms

(d) flax plant

Correct answer: plant

Exercise — A. Multiple Choice Questions

2. Which are the main areas where cotton is grown in Pakistan?

(a) Kashmir

(b) Punjab ✓

(c) Gilgit

(d) Balochistan

Correct answer: Punjab

Exercise — A. Multiple Choice Questions

3. Where is silk obtained from?

(a) silkworm ✓

(b) plant

(c) seeds

(d) all of the above

Correct answer: silkworm

Exercise — A. Multiple Choice Questions

4. Which part of the jute plant is used to obtain fiber?

(a) leaves

(b) seeds

(c) stem

(d) roots ✓

Correct answer: roots

Exercise — A. Multiple Choice Questions

5. What was the impact of the Industrial Revolution on textiles?

(a) increased production

(b) mechanized textile manufacturing ✓

(c) reduced cost

(d) expansion of the cotton industry

Correct answer: mechanized textile manufacturing

Exercise — A. Multiple Choice Questions

6. Which of the following is an animal-based fiber?

(a) polyester

(b) cotton

(c) pilk ✓

(d) linen

Correct answer: pilk

Exercise — A. Multiple Choice Questions

7. Which of the following are associated with jute production?

(a) hessian cloth ✓

(b) parachutes

(c) tents

(d) carpets

Correct answer: hessian cloth

Exercise — A. Multiple Choice Questions

8. What is the main characteristic of polyester?

(a) biodegradability

(b) high durability 

(c) absorbs moisture

(d) requires handwashing

Correct answer: high durability

Exercise — A. Multiple Choice Questions

9. What is wool primarily obtained from?

(a) silkworms

(b) sheep 

(c) cotton plants

(d) synthetic processes

Correct answer: sheep

Exercise — A. Multiple Choice Questions

10. What are common uses of silk?

(a) winter clothing

(b) heavy-duty ropes

(c) upholstery

(d) luxury fabrics 

Correct answer: luxury fabrics

Exercise — Notes on Questions 3, 5, 6 and 10

Why are these questions marked this way?

Print notes: Question 3 prints its fourth option as 'c) all of the above' instead of 'd)'; the answer is (a) silkworm. Question 6 prints option (c) as 'pilk', read here as

'silk', the animal-based fiber (silk and wool are the chapter's animal fibers). Question 10 prints two options labelled '(c)' (upholstery and luxury fabrics); the answer is luxury fabrics. Question 5: mechanized manufacturing is marked because the chapter describes the Industrial Revolution as introducing mechanisation, mass production and factory-based work; increased production, reduced cost and expansion of the cotton industry were its results.

Exercise — B. Short Answer Questions

1. Where did cotton originated in the subcontinent?

There is evidence that people in Mehrgarh (Balochistan, Pakistan) were growing cotton around 7000 BC. They were some of the first to grow cotton and make cloth from it, and they were skilled at spinning, weaving and dyeing. The spinning wheel, or charkha, has been used for centuries, particularly in the South Asian subcontinent, as a crucial tool for spinning cotton into yarn.

Exercise — B. Short Answer Questions

2. What is the major use of technical textiles?

The major use of technical textiles is protective: technical and protective textiles are designed to offer safety against hazards, such as heat, chemicals or cuts. The chapter's other major uses are aesthetic and functional textiles, with vibrant patterns or images used in clothing and home decor, and medical textiles used in healthcare.

Exercise — B. Short Answer Questions

3. What areas of Pakistan are famous for cotton crop?

In Pakistan, cotton production is primarily concentrated in Punjab, Sindh and Balochistan. Punjab is the leading cotton producer: important regions include Multan, Bahawalpur, Faisalabad, Rahim Yar Khan, Sahiwal and Dera Ghazi Khan,

where fertile soil and an extensive irrigation system support high cotton yields. Sindh's major cotton-growing regions include Sanghar, Mirpur Khas, Nawabshah, Badin and Thatta, where the hot climate and adequate irrigation from the Indus River make Sindh highly suitable for cotton cultivation. In Balochistan, key areas include Nasirabad and Kalat.

Exercise — B. Short Answer Questions

4. Where the wool comes from?

Wool comes from the fleece of sheep and other animals like goats (cashmere), rabbits (angora) and alpacas. It is a natural animal fiber that is warm, elastic and has excellent moisture-wicking properties, and it can retain heat even when wet, making it ideal for colder climates.

Exercise — B. Short Answer Questions

5. Which region is historically significant for cotton growth?

Mehrgarh, in Balochistan, Pakistan, is historically significant for cotton growth: there is evidence that people there were growing cotton around 7000 BC, were some of the first to grow cotton and make cloth from it, and were skilled at spinning, weaving and dyeing.

Exercise — B. Short Answer Questions

6. What is a fiber?

Fibers are hair-like materials from which textiles are made. They can be natural, such as cotton, wool and silk, or synthetic, like polyester and nylon. Their properties are length and flexibility, which make them suitable for spinning into threads or fabrics; strength, since many fibers can endure tension and stress; elasticity, since some fibers can stretch and return to their original shape; absorbency, since many fibers can absorb moisture, useful in textiles and

hygiene products; and thermal insulation, since certain fibers help retain heat or provide cooling effects.

Exercise — B. Short Answer Questions

7. What are some examples of medical textiles?

Medical textiles are used in healthcare, and examples given in the chapter are bandages and surgical gowns that have specific properties for patient care. They are one of the three major uses of textiles, alongside aesthetic and functional textiles and technical and protective textiles.

Exercise — B. Short Answer Questions

8. Why is cotton important for Pakistan's economy?

Cotton is very important for Pakistan for four reasons. First, its economic role: cotton is a key cash crop in Pakistan and helps the economy a lot, providing jobs for millions of people, especially in the countryside. Second, the textile industry: Pakistan produces a lot of cotton, which is essential for the textile industry, a major source of exports that brings in money from other countries. Third, employability: many farmers rely on growing cotton for their income, and it supports not just farmers but many people involved in processing and making cotton products. Fourth, global impact: Pakistan is one of the major cotton producer and user countries in the world.

Exercise — B. Short Answer Questions

9. What makes silk different from other natural fibers?

Silk is different because it is a luxurious fiber produced by silkworms when they create their cocoons, while cotton and jute are plant-based fibers and wool comes from the fleece of animals. Silk is known for its smooth texture and sheen: it is lightweight, strong, has a natural sheen, drapes beautifully and feels

soft against the skin. Its table properties are soft and lightweight, but it needs high maintenance, unlike cotton, which is durable, comfortable and breathable with relatively low maintenance.

Exercise — B. Short Answer Questions

10. What is the process of making wool fiber?

The process of making wool fiber, shown in the chapter's Figure 8.5, has five steps: (1) shearing, cutting the fleece from the sheep; (2) scouring, washing the fleece; (3) sorting the wool; (4) carding, combing the fibers straight; and (5) making yarn from the carded wool. Wool is then commonly used in sweaters, blankets, coats and carpets.

Exercise — C. Comprehensive Questions

1. Identify and compare different types of cotton fabrics. Discuss the uses of each type in everyday clothing and textiles.

Cotton is a soft, fluffy fiber that grows in the seed pods of the cotton plant and is one of the most widely used natural fibers in the world. It is breathable, absorbent and comfortable to wear, can be easily dyed and is machine washable, and it is commonly used in clothing like t-shirts and jeans, bed linens, towels and various household items. Jute, the 'Golden Fiber', is strong, durable, affordable, biodegradable and renewable, and is used to make hessian cloth, ropes, bags, geo textiles, carpet backing, textiles and biodegradable packaging. Wool is warm, elastic and moisture-wicking, used in sweaters, blankets, coats and carpets. Silk is lightweight, strong and lustrous, used in high-end clothing like dresses and ties, bed linens and accessories like scarves. Man-made fibers differ again: polyester is strong and wrinkle-resistant, used in clothes and home fabrics; nylon is strong and stretchy, used in outdoor gear; acrylic is light and warm, used as a substitute for wool; and rayon, made from plant material, is

comfortable and feels like silk, used in clothing.

Exercise — C. Comprehensive Questions

2. List down the usage of cotton and wool production in Pakistan. Create a poster and discuss the significance of these fibers in the local market.

Poster content (presented here as text): COTTON AND WOOL — PAKISTAN'S NATURAL FIBERS. Cotton: grown since 7000 BC at Mehrgarh; Pakistan's key cash crop, providing jobs for millions and feeding a major export textile industry. Main areas: Punjab (Multan, Bahawalpur, Faisalabad, Rahim Yar Khan, Sahiwal, Dera Ghazi Khan), Sindh (Sanghar, Mirpur Khas, Nawabshah, Badin, Thatta) and Balochistan (Nasirabad, Kalat). Cotton is soft, breathable, absorbent and easily dyed, used in clothes, bed linens and towels. Wool: obtained from the fleece of sheep, goats (cashmere), rabbits (angora) and alpacas; warm, elastic and moisture-wicking, retaining heat even when wet. Process: shearing, scouring, sorting, carding, making yarn. Used in sweaters, blankets, coats and carpets. Both fibers matter in the local market because they support farmers, spinners, weavers and export earnings, and they suit Pakistan's climate and clothing needs, cotton for warm weather and wool for cold weather.

Exercise — C. Comprehensive Questions

3. What is the process of jute and wool fiber making? Describe in detail.

Jute fiber making: jute is a natural fiber from the jute plant, also known as the 'Golden Fiber'. The chapter's manufacturing process (Figure 8.4) runs: plant, then jute fiber, then blending, then arranging the fiber in a criss-cross pattern, then needle punching to lock the fibers, and finally jute nonwovens. Jute fiber is obtained from the stem of the jute plant. Jute is strong, durable, affordable, biodegradable and renewable, and is used for hessian cloth, ropes, bags, geo textiles, carpet backing, textiles and biodegradable packaging. Wool fiber

making: wool is obtained from the fleece of sheep and other animals like goats (cashmere), rabbits (angora) and alpacas, and its process (Figure 8.5) has five steps: (1) shearing, (2) scouring, (3) sorting, (4) carding, and (5) making yarn. Wool is warm, elastic and moisture-wicking, retains heat even when wet, and is used in sweaters, blankets, coats and carpets.

Chapter 9: Basics of Sewing

Exercise — A. Multiple Choice Questions

1. What is the primary purpose of sewing?

(a) to decorate fabrics

(b) to join pieces of fabric together ✓

(c) to paint on fabric

(d) to cut fabric into shapes

Correct answer: to join pieces of fabric together

Exercise — A. Multiple Choice Questions

2. Which tool is used to measure fabric accurately?

(a) scissors

(b) measuring tape ✓

(c) seam ripper

(d) pin cushion

Correct answer: measuring tape

Exercise — A. Multiple Choice Questions

3. What is the function of a seam ripper?

(a) to cut fabric

(b) to hold fabric pieces together

(c) to undo stitches ✓

(d) to press fabric

Correct answer: to undo stitches

Exercise — A. Multiple Choice Questions

4. What is the first step in threading a needle?

(a) insert thread into fabric

(b) cut thread of 18 inches long ✓

(c) tie a knot at the end

(d) start stitching immediately

Correct answer: cut thread of 18 inches long

Exercise — A. Multiple Choice Questions

5. What is the purpose of pressing in sewing?

(a) to remove stains

(b) to stretch fabric

(c) to create neat seams and shapes ✓

(d) to cut fabric precisely

Correct answer: to create neat seams and shapes

Exercise — A. Multiple Choice Questions

6. Which hand stitch is the simplest and commonly used for basic sewing?

(a) running stitch ✓

(b) backstitch

(c) slip stitch

(d) overstitch

Correct answer: running stitch

Exercise — A. Multiple Choice Questions

7. Which stitch is stronger and used for durable seams?

(a) running stitch

(b) backstitch ✓

(c) whip stitch

(d) cross-stitch

Correct answer: backstitch

Exercise — A. Multiple Choice Questions

8. What is the purpose of a basting stitch?

(a) create permanent seams

(b) hold fabric together temporarily

(c) to finish fabric edges

(d) to add decorative details

Correct answer: hold fabric together temporarily

Exercise — A. Multiple Choice Questions

9. Why is it important to use a thimble when hand sewing?

(a) to make stitches faster

(b) to prevent finger injuries

(c) to improve thread strength

(d) to cut fabric easily

Correct answer: to prevent finger injuries

Exercise — A. Multiple Choice Questions

10. Which type of fabric is natural?

(a) polyester

(b) wool

(c) acrylic

(d) nylon

Correct answer: wool

Exercise — B. Short Answer Questions

1. Name three essential sewing tools and their functions.

Needles: needles come in various sizes and types, and the size of the needle depends on the type of fabric you are working with. Thread: thread is used to

join the fabric layers together; cotton, polyester and silk threads are common types, with cotton thread working well with natural fabrics and polyester thread suiting synthetic materials. Measuring tape: a soft, flexible tape used to measure fabric for cutting and stitching. Other essential tools in the chapter are scissors (sharp fabric scissors for fabric cutting), pins (which hold the fabric pieces together before they are sewn), chalk or fabric markers (for marking measurements, pattern lines or sewing guidelines), seam ripper, thimble and ruler.

Exercise — B. Short Answer Questions

2. What is the purpose of a seam ripper?

A seam ripper is used to rip or open stitches without damaging the fabric. It lets the sewer undo stitches when a seam needs correcting, without cutting or tearing the fabric itself.

Exercise — B. Short Answer Questions

3. Name three basic hand stitches and their uses.

Three basic hand stitches are: the running stitch, the most basic hand-sewn stitch, used to join two pieces of fabric together; the backstitch, used for stronger seams, in which the needle goes backward and forward in a line, locking the stitches in place; and the whip stitch, used to sew the edges of a fabric, often for hemming. The chapter also lists the over stitch, used to finish the edges of fabric to prevent fraying, and the slip stitch, used to hand-sew hems or edges without showing on the front (right side) of the fabric.

Exercise — B. Short Answer Questions

4. What is a running stitch, and when is it used?

A running stitch is the most basic hand-sewn stitch, used to join two pieces of

fabric together. It is used for basic sewing and simple joins where great strength is not required, and it is the simplest stitch in the chapter's list.

Exercise — B. Short Answer Questions

5. How does a backstitch differ from a running stitch?

A running stitch is a simple stitch used to join two pieces of fabric together, while a backstitch is stronger than the running stitch and is used for seams that need to hold a lot of weight, like on the sides of a shirt. In a backstitch the needle goes backward and forward in a line, locking the stitches in place, so the seam is much stronger and more durable than a running stitch seam.

Exercise — B. Short Answer Questions

6. What are the key parts of a sewing machine?

The key parts of a manual sewing machine are: (1) spool pin/holder, (2) wheel handle, (3) take up lever, (4) presser foot, (5) slide plate, (6) needle, (7) feed dogs, and (8) stitch selector. An electric sewing machine additionally has a spool thread, thread take-up, thread guide, bobbin winder, balance wheel, stitch width regulator dial, stitch length regulator dial, reverse lever, stitch selection panel, presser foot lifter, bobbin compartment, bobbin case, bobbin and foot pedal.

Exercise — B. Short Answer Questions

7. Why is the fabric grainlines important in sewing?

Grain lines in fabric refer to the orientation of the threads that make up the fabric, which directly affects how the fabric behaves. Understanding the grain lines is essential for cutting out patterns and ensuring your garment fits and moves correctly. There are three primary grain lines: the lengthwise grain (straight grain), running parallel to the selvage, which is the strongest grain line, offers the least stretch and drapes more evenly with a structured feel; the

crosswise grain (weft grain), running perpendicular to the lengthwise grain, which offers a bit of stretch, is often used for adding ease and generally drapes softer; and the bias grain, running at a 45-degree angle to both, which is the most stretchy direction and creates a beautiful drape that hugs curves.

Exercise — B. Short Answer Questions

8. What are warp and weft in fabric construction?

Warp and weft are terms used to describe the two main types of yarns or threads that are woven together to create fabric. Warp (lengthwise threads) are the threads that run vertically or along the selvedge, the finished edges of the fabric. Weft (crosswise threads) are the threads that run horizontally across the fabric, perpendicular to the warp threads, passing over and under the warp threads to create the fabric weave. Understanding the difference is essential because these directions affect the fabric's strength, stretch and drape.

Exercise — B. Short Answer Questions

9. Name any two natural and synthetic fabrics?

Two natural fabrics are cotton, a natural fabric made from the cotton plant, soft and breathable, usually used for clothing and home textiles; and wool, a natural fabric made from animal fibers, typically from sheep, often used for sweaters, coats and blankets. Two synthetic fabrics are polyester, a synthetic, durable and wrinkle-resistant fabric commonly used in active wear, home furnishings and mixed-fiber clothing; and nylon, a strong, elastic synthetic fabric often used in sportswear, outerwear and accessories like stockings.

Exercise — B. Short Answer Questions

10. Why pressing the seam is important after stitching?

Pressing is an important part of sewing that helps create neat seams and

ensures the fabric stays in the desired shape, and an iron is used to press the fabrics. Pressing a seam after stitching therefore flattens and sets the seam, gives the garment a neat, professional finish, and helps the fabric hold its intended shape instead of puckering or rolling.

Exercise — C. Comprehensive Questions

1. What are the essential sewing tools, and why is each important for making a garment?

The essential sewing tools are: needles, in various sizes and types, chosen according to the fabric; thread, used to join fabric layers together, with cotton thread for natural fabrics and polyester thread for synthetic materials, plus silk thread; scissors, sharp fabric scissors for cutting fabric; measuring tape, a soft, flexible tape for measuring fabric for cutting and stitching; pins, which hold fabric pieces together before they are sewn; chalk or fabric markers, for marking measurements, pattern lines or sewing guidelines; seam ripper, for ripping or opening stitches without damaging the fabric; thimble, a small protective tool worn on the finger to prevent injury while sewing by hand; and ruler, for precise measurements and straight lines in fabric cutting and sewing. Each tool matters because sewing needs accurate measuring, clean cutting, safe handling and secure joining: without them, pieces would not fit, seams would be uneven, and the garment would not hold its shape.

Exercise — C. Comprehensive Questions

2. How would you explain the difference between hand sewing and machine sewing, and when might you use each method?

Sewing is the process of joining pieces of fabric together using a needle and thread, and it can be done by hand (using a needle and thread) or with a sewing machine. Hand sewing uses basic hand stitches such as the running stitch,

backstitch, whip stitch, over stitch and slip stitch; it allows precision and control in areas where machines may not be suitable, gives a neat, clean finish especially for hems, linings or seams where machine stitching might be visible, and is invaluable for small repairs or alterations and for fine details like embroidery or beadwork. Machine sewing uses a mechanical or electrical device to stitch fabric together using thread; it speeds up the sewing process compared to hand-sewing, is used from simple home repairs to complex quilting and garment-making, and typically stitches between 8 to 12 stitches per inch, with stitch selection and gentle feeding of fabric under the presser foot. Use hand sewing for delicate finishes, repairs and details, and machine sewing for long seams and faster garment construction.

Exercise — C. Comprehensive Questions

3. Name three basic hand stitches, describe how each one is used, and explain why they are important in garment construction.

Three basic hand stitches are the running stitch, the backstitch and the whip stitch. The running stitch is the most basic hand-sewn stitch, used to join two pieces of fabric together with simple, even stitches. The backstitch is used for stronger seams: the needle goes backward and forward in a line, locking the stitches in place, and it is stronger than the running stitch, often used for seams that need to hold a lot of weight, like on the sides of a shirt. The whip stitch is used to sew the edges of a fabric, often for hemming. They are important in garment construction because hand stitches allow precision and control where machines may not be suitable, provide a neat, clean finish for hems, linings or visible seams, are invaluable for small repairs or alterations, are used for fine details like embroidery or beadwork, and give a fundamental understanding of fabric behaviour and stitching techniques that applies to advanced projects.
