Social Studies

Class 8 (English Medium)

Solved Exercises — Sindh Textbook Board

28 lessons — 439 questions

Unit 1, Chapter 1: Renaissance

Exercise: Fill in the blanks

Renaissance means the rebirth of art, music and culture in Europe.

Two famous artists during renaissance were _____ and _____.

Answer: Leonardo da Vinci, Raphael.

William Shakespeare is a famous English writer and dramatist.

Exercise: Answer the following questions

Question: What do you mean by the word Renaissance?

Answer: Renaissance means the rebirth of intellectual learning, art, music and culture in Europe. It lasted from the early 14th century to the late 16th century and bridged the long gap between the Middle Ages and modern civilization. During this period Europe experienced a new wave of learning in philosophy, literature, science and art.

Question: Explain the importance of the printing press during the Renaissance?

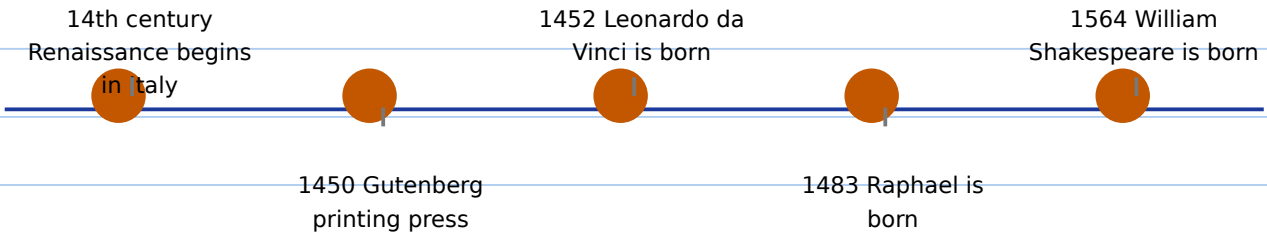

Answer: The printing press, put into operation by Johannes Gutenberg in 1450, spread knowledge to other parts of the world quickly and cheaply. Religious messages could now be printed and spread in the form of books, and people started to read in different languages. In this way education became reachable for every person and the Renaissance spread faster.

Question: Describe the three things that artists focused during the Renaissance era?

Answer: Renaissance artists focused mainly on three things: painting

portraits, the natural world and the technique of perspective. Portrait painting showed real human faces and feelings, the natural world was painted as it actually looked, and perspective gave depth and a real-life look to paintings.

Renaissance

Unit 1, Chapter 2: Reformation and the Age of Exploration

Exercise: Fill in the blanks

Reformation is the _____ century religious movement. (a) 15th (b) 16th (c) 17th (d) 18th

Answer: 16th

_____ Merchants found the East India Company. (a) English (b) French (c) Turkish (d) Spanish

Answer: English merchants

_____ Number of Dutch men set up colonies. (a) 1400 (b) 1500 (c) 1600 (d) 1700

Answer: 1600 number

Exercise: Answer the following questions

Question: Why did the Reformation occur?

Answer: The Reformation occurred because Martin Luther started a religious movement in the 16th century against the practices of the Catholic Church. It resulted in the formation of new groups within Christianity and later also developed political dimensions. It brought many social, political and cultural changes throughout Europe.

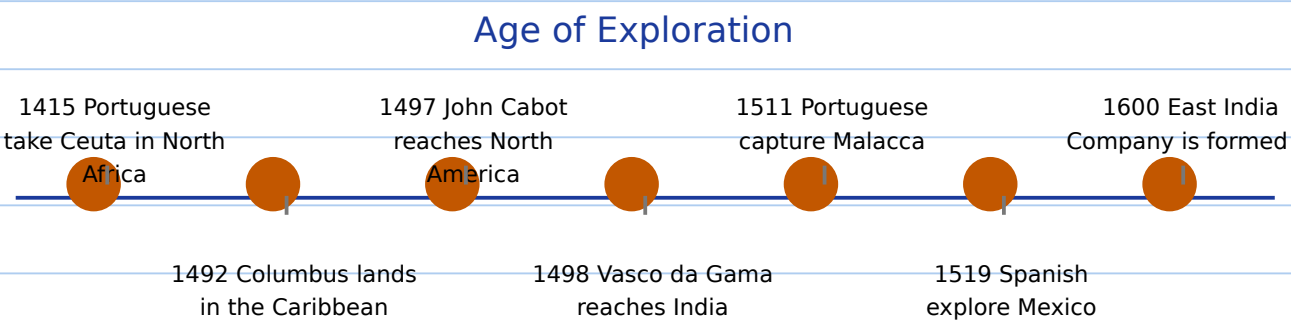

Question: What is the Age of Exploration?

Answer: The Age of Exploration, also known as the Age of Discovery, was the period from the 1400s to the 1600s when Europeans travelled by sea to new places to learn about them and to search for things in them. They

found new sea routes to Asia, Africa and North America and developed new economic markets. They also established colonies to extend their countries overseas.

Question: How important did the age of discovery prove for the Europeans? Explain.

Answer: The Age of Discovery proved very important for the Europeans because it gave them new sea routes, new markets and colonies in many parts of the world. Vasco da Gama reached India after rounding Africa in 1498, which gave Portugal direct access to Asian markets. Through trade and colonies the European countries became rich and powerful across the globe.

Unit 1, Chapter 3: Enlightenment and the Industrial Revolution

Exercise: Fill in the blanks

The Enlightenment is a _____. (a) Movement (b) School (c) Church (d) Book

Answer: movement.

Descartes was a famous _____ Philosopher. (a) British (b) French (c) Persian (d) American

A compass contains a needle. . (a) Pin (b) Thread (c) Needle (d) Stick

Exercise: Answer the following questions

Question: What is Enlightenment?

Answer: The Enlightenment was a smart cultural movement in Europe in the 17th and 18th centuries, also called the Age of Reason. People began to think carefully and used logic and reason to understand things, instead of following tradition blindly. It emphasized reasoning and individualism, and educated people began to apply a scientific approach to different aspects of society.

Question: What are the contributions of Jacques Rousseau and Isaac Newton?

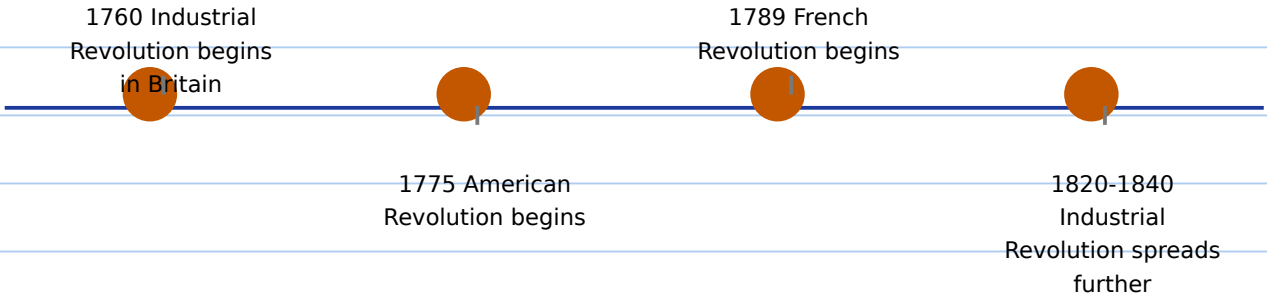

Answer: Jacques Rousseau was a French philosopher and writer whose political philosophy, particularly his formulation of the Social Contract theory, influenced the French Revolution. Isaac Newton was a great

mathematician who gave the law of universal gravitation and made rules about how things move, which helped create modern physics. He also figured out calculus, a tool for solving math problems.

Question: What are the differences between cloth making before and after the Industrial Revolution?

Answer: Before the Industrial Revolution, making clothes was a small-scale job done at home or on farms, called the cottage industry, and it was slow and inefficient. After the Industrial Revolution, new machines such as John Kay's and James Hargreaves' weaving and spinning machines, Arkwright's water frame, Cartwright's power loom and Eli Whitney's cotton gin made cloth much faster in factories. As factories started appearing, Britain became the first country to industrialize.

Enlightenment and Revolutions in Europe

Unit 1, Chapter 4: Modernisation in Europe

Exercise: CHECK YOUR KNOWLEDGE AND UNDERSTANDING. FILL IN THE BLANKS.

Belief is a state of mind. (a) State (b) Note (c) Collection (d) Universe

Digital technology helps to pass _____. (a) Information (b) News (c) Gossip (d) Chit Chat

Answer: information.

The course of changing perspective, world views and opinions were advancement in _____, art and literature. (a) technology (b) art history (c) folk literature (d) architecture

Answer: technology,

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: How do you think the perspectives of the world changed to a more modern world?

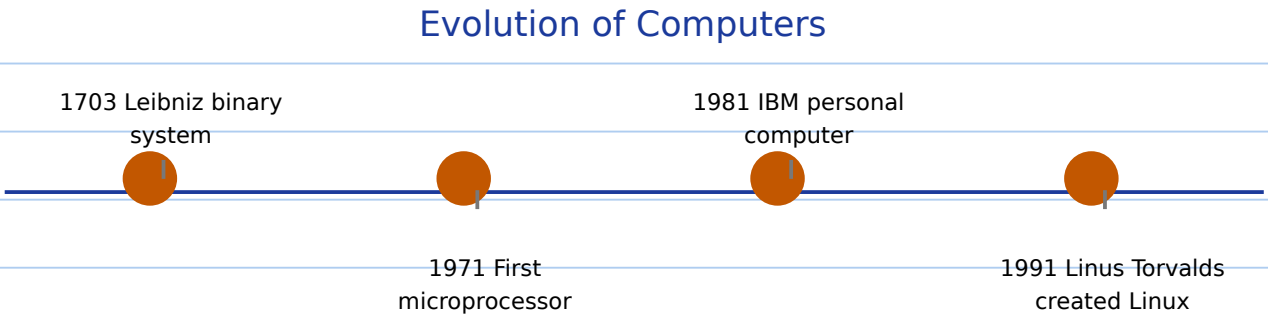

Answer: The perspectives of the world changed because advancements in technology, art, literature, human rights and fundamental beliefs challenged the old worldviews and opinions. Inventions such as the printing press, the telescope and the steam engine, and later the computer and the internet, spread knowledge and new ideas quickly to every part of the world. In this way the world passed from traditional ways of thinking into a more scientifically advanced and technologically swift modern world.

Question: What are some impacts of development of technology in our lives?

Answer: The development of technology has made communication, travel, work and learning much faster and easier, as seen in the telephone, electricity, computers and the internet. It has also brought new challenges, because young people spend too much time on social technologies and are becoming isolated from one another. Traditional means of social gatherings are fading away, and an entirely new generation has become fully reliant or dependent on these technologies.

Question: How has internet changed our lifestyles?

Answer: The internet, begun with the World Wide Web invented by Tim Berners-Lee in 1989 and made wireless by Wi-Fi in 1997, has changed our lifestyles by giving us instant information, education, work and communication at any place and time. People now stay connected with family and friends across the world and do many daily tasks online instead of in person. At the same time, too much use of the internet has reduced face-to-face social gatherings and made people dependent on social technologies.

Unit 1, Chapter 5: The British Rule in India

(1600-1885)

Exercise: CHECK YOUR KNOWLEDGE AND UNDERSTANDING. FILL IN THE BLANKS.

_____ grant a Royal Charter to the East India Company on December 31, 1600.

Answer: Queen Elizabeth-I granted

Tipu Sultan was born at Devanhalli.

Tipu Sultan was known as Tiger of Mysor.

Sir Syed Ahmed Khan established school in Aligarh in 1875.

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: How many wars were fought by the Indians against the British?

Answer: The Indians fought many wars against the British, and the chapter lists sixteen major wars and campaigns between 1686 and 1920. These include the Carnatic Wars, the Anglo-Mysore Wars, the Anglo-Maratha Wars, the Anglo-Nepalese War and the War of Independence of 1857. Rulers such as Hyder Ali and Tipu Sultan of Mysore also resisted the British bravely in southern India.

Question: Explain the reasons behind failure of the War of Independence?

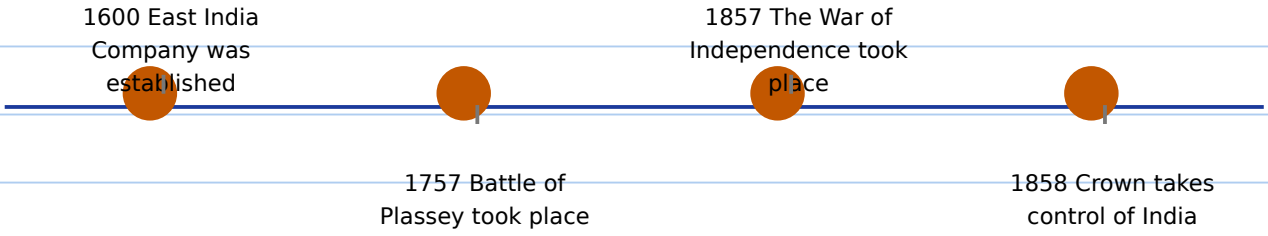

Answer: The War of Independence failed mainly because there was a lack

of unity between Hindus and Muslims, and the revolt was uncoordinated and lacked strategic planning and proper leadership. The British army was strong, well trained and equipped with the latest weapons, so it could crush the revolt with force. Some loyal states in India also supported the British, which made the failure of the war certain.

Question: Describe role on Indian National Congress in raising political awareness in Indian Sub-Continent.

Answer: The Indian National Congress, established in 1885 by a retired British officer, Allan Octavian Hume, gave the people of India a common political forum to represent their views before the British government. Its major purpose was to introduce a democratic system in India, and through it Indians began to be given a say in political affairs. In this way it spread political awareness among the people and turned scattered discontent against British rule into an organized political movement.

East India Company Timeline

Unit 1, Chapter 6: Self-Rule in India and Muslim Struggle (1905-1932)

Exercise: Fill in the blanks

The partition of Bengal proved that there was _____ dominance in the Congress.

Answer: Hindu

The British introduced _____ in the Montague-Chelmsford Reforms in 1919.

Answer: diarchy

The Jhallian Wala Bagh massacre is also known as _____.

Answer: the Amritsar massacre.

_____ came to India in 1927 to investigate about the future Indian needs.

Answer: Simon Commission

Exercise: Answer the following questions

Question: Why did the Indians sign the Lucknow Pact in 1916 and why did it fail?

Answer: The Lucknow Pact was signed in 1916 so that the Congress and the Muslim League could work together and present common demands for self-rule to the British, and the Congress accepted separate electorates for the Muslims. It failed because this unity did not last long, as the two parties again developed differences and Congress later went back on the agreed principles. With the end of Hindu-Muslim cooperation, the pact lost

its value.

Question: Using a variety of sources, identify whether the Jhallian Wala Bagh massacre happened at the spur of the moment or planned?

Answer: The evidence shows that the Jhallian Wala Bagh massacre of 1919 was not a sudden action but a planned one. General Dyer reached Amritsar with his troops, blocked the only narrow exit of the bagh and ordered firing on the unarmed and peaceful crowd without any warning. The firing continued until the ammunition was nearly finished, which shows that the action was decided in advance to frighten the people.

Question: Why do you think the Khilafat Movement was a failure?

Answer: The Khilafat Movement failed mainly because the Turks themselves abolished the Khilafat in 1924, so the cause for which it was launched no longer existed. Gandhi also called off the Non-Cooperation Movement after the Chauri Chaura incident of 1922, which weakened the struggle. As a result, Hindu-Muslim unity broke down and the movement ended without achieving its aims.

Question: What was the importance of the 14 points of Jinnah for the future of the Muslims of India?

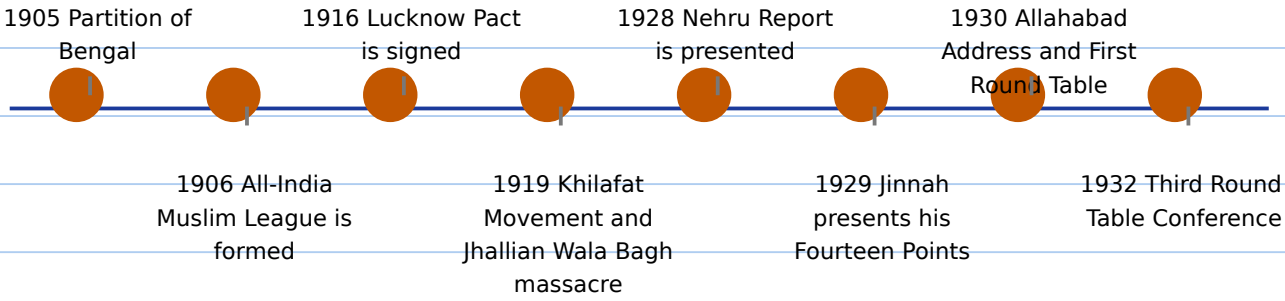

Answer: Jinnah's Fourteen Points of 1929 were a charter of demands to protect the political, religious and cultural rights of the Muslims of India. They demanded, among other things, separate electorates, one-third Muslim representation in the central legislature, provincial autonomy and the separation of Sindh from Bombay. These points became the basis of all future Muslim demands and finally led the Muslims towards the demand for a separate homeland.

Question: To what extent do you think that the World War 1 paved a way for a new struggle movement in India? Explain your answer.

Answer: World War I paved the way for a new struggle movement in India

to a great extent. Indians supported Britain in the war and expected self-government in return, but instead they received the Rowlatt Act and the Jhallian Wala Bagh tragedy, which created anger all over India. War-time hardship, high prices and unemployment also increased discontent, so movements like the Khilafat and Non-Cooperation movements started with mass public support.

Muslim Struggle 1905 to 1932

Unit 1, Chapter 7: Self Rule in India and Creation of Pakistan (1930-1947)

Exercise: Fill in the blanks

Muslims are a nation according to any definition of the nation.

The British government sent _____ with Cripps proposals.

Answer: Sir Stafford Cripps

Quaid-i-Azam strictly opposed the Quit India movement.

Gandhi had shunted C.R. formula.

Wavell announced the failure of _____.

Answer: the Simla Conference.

_____ was the sole representative of the Muslims.

Answer: All-India Muslim League

Liaquat Ali Khan presented a poor man's budget.

Cripp's Mission came to India in 1942. .

Exercise: Answer the following questions

Question: Define the reasons which led to the creation of the Indian National Congress?

Answer: After the War of Independence, Indians had become politically

aware and wanted an organized and effective group to address the British government's unfair policies. A retired English bureaucrat, A.O. Hume, proposed a plan to Lord Dufferin to create a political party that could represent the Indian people and their concerns. For these reasons the Indian National Congress was created in 1885.

Question: What were demands of Simla Deputation and their importance?

Answer: The Simla Deputation of 1906 demanded separate electorates for the Muslims, representation in proportion to their population and political importance, and Muslim representation in councils, services and universities. Its importance is that the Viceroy accepted these demands, separate electorates were granted in the reforms of 1909, and the deputation led directly to the formation of the All-India Muslim League in 1906.

Question: What did Gandhi say about government proposals?

Answer: Gandhi rejected the Cripps proposals sent by the British government in 1942. He described them as a post-dated cheque on a crashing bank, because the proposals promised self-government only after the war and gave no real power to the Indians immediately. For this reason the Congress refused to accept them.

Question: What was the role of the Indian National Conference in raising political awareness in India?

Answer: The Indian National Congress played a leading role in raising political awareness in India by giving the Indians one common platform to discuss their problems and demands. Through its annual sessions held in different cities, it spread political ideas among the educated people of all provinces. It gradually turned public discontent against British policies into an organized political movement for self-rule.

Question: Was the Simon Commission a trick of the British to gain Indians'

faith?

Answer: Yes, the Simon Commission is rightly seen as a trick of the British, because it was sent in 1927 to report on India's future needs but not a single Indian was included in it. Indians boycotted it with the slogan "Simon Go Back" because the British wanted to decide India's future without the Indians themselves. Its report was therefore rejected and it failed to gain the faith of the Indians.

Question: Why did the Round Table Conferences fail?

Answer: The Round Table Conferences of 1930 to 1932 failed because the parties could not agree on the communal problem and the future constitution of India. The Congress boycotted the first conference, Gandhi showed a rigid attitude in the second, and the Congress was absent from the third conference. Due to these differences of opinion, none of the conferences achieved their objectives.

Question: Why did the Muslims demand a separate homeland for Muslims?

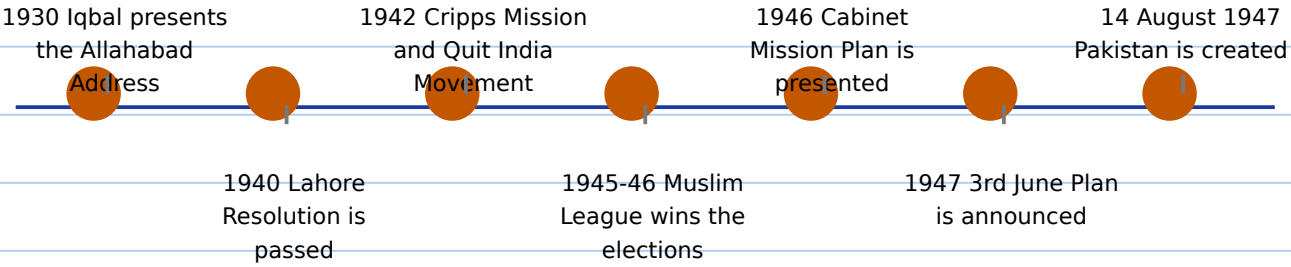

Answer: The Muslims demanded a separate homeland because during the Congress rule of 1937 to 1939 they faced discrimination, injustice and attacks on their religion, language and culture. Urdu was replaced by Hindi, Bande Mataram was imposed and communal riots made the Muslims feel insecure in a united India. They therefore concluded, under the Two-Nation Theory, that as a separate nation they could only protect their rights in their own homeland.

Question: Comment on the effectiveness of the 3rd June Plan for Pakistan.

Answer: The 3rd June Plan of 1947, announced by Lord Mountbatten, was very effective for the creation of Pakistan because it was accepted by both the Congress and the Muslim League and fixed a clear method and date for the transfer of power. Under it, the provincial assemblies decided about partition and power was transferred within 72 days of its announcement.

As a result, Pakistan came into being on 14 August 1947.

Creation of Pakistan 1930 to 1947

Unit 2, Chapter 1: Development and Sustainable

Development

Exercise: FILL IN THE BLANKS.

Agrarian societies in _____ and _____ transformed into industrial urban areas.

Answer: Europe, America

The sustainable development is around four components.

UNO is work for the sector in _____.

Answer: education, health, social justice and environment. The book explains that international organizations work for these sectors within Pakistan and globally to improve the quality of life of people.

UNODC is work for sector in _____.

Answer: drugs and crime. Its full name, the United Nations Office on Drugs and Crime, shows that it works to control drugs and crime, as part of the international organizations working for development.

NDMA is stand for _____.

Answer: National Disaster Management Authority. It is the national body, backed by the national government, which works to prevent disasters, prepare for them and reduce their impact.

Pakistan coastal areas divided into five parts.

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: What do you know about industrial revolution?

Answer: The Industrial Revolution was the major change that began in the second half of the 18th century, when mostly rural societies in Europe and America were transformed into industrialized urban areas. It passed through stages that used water and steam power, then electric power for mass production, then electronics and information technology, and now artificial intelligence and robotics. It increased wealth, production of goods and the standard of living, but it also caused pollution, overpopulation and deforestation.

Question: Suggest other ways of principal can sustain fishing and forestry?

Answer: Fishing and forestry can be sustained by following the principles given in the chapter, such as safeguarding natural resources, improving livelihoods and strengthening the ability of communities and ecosystems to withstand challenges. Other ways are fixing catch limits, stopping fishing in the breeding season, planting more trees than are cut, and stopping illegal cutting of forests. In this way fish and forests keep renewing themselves and remain available for future generations.

Question: What do you know about major issues impacting the land and people?

Answer: The major issues impacting the land and people include global warming, ineffective governance, wasteful food practices, loss of biodiversity, plastic pollution, deforestation, air pollution and melting ice caps with rising sea levels. Other issues are ocean acidification, use of fertilizers and pesticides in agriculture, land exhaustion and unanalysed carbon emissions. These issues damage natural resources and make life difficult for people, so they need urgent attention.

Question: What is the potential climate change impacts?

Answer: The potential climate change impacts include changes in water

resources, damage to agriculture, harm to human health, and loss of forests and natural species. Higher temperatures, shifting rainfall and more frequent droughts will reduce the water available in lakes, rivers and streams and affect the replenishment of groundwater. Rising sea levels will also threaten coastal areas, their buildings and the cities situated near them.

Question: During the recent pandemic what role in your locality did local government?

Answer: During the recent pandemic, the local government in our locality performed communication and coordination among disaster management agencies. It also worked for the development of local level resilience and capacity building, so that people could face the emergency. Through such coordination, instructions and safety measures reached the people in time.

Exercise: USE YOUR ENQUIRY / INVESTIGATION SKILLS: Survey some common items in your homes. Use the given list or change it. Now find out where were these items made/ produced? 1. How many of these items are made in Pakistan?

Question: How many items are from other countries?

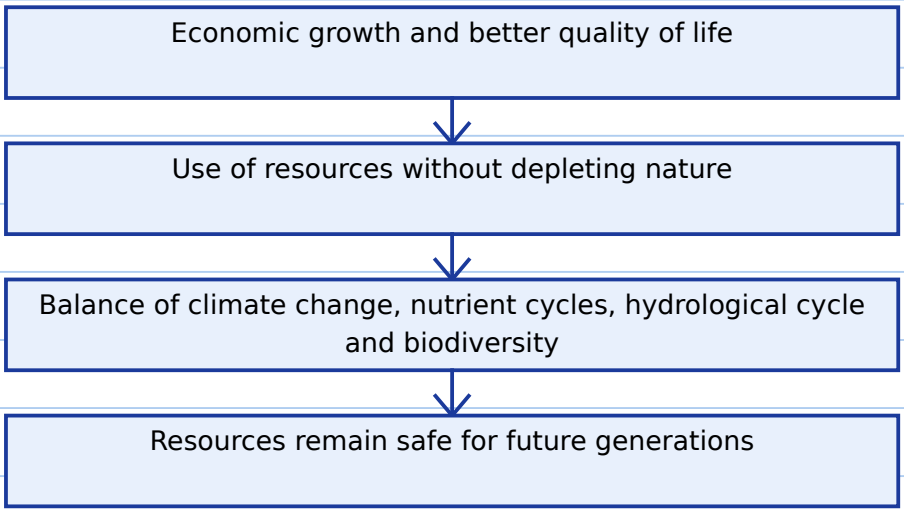

Answer: Items such as computers and mobile phones are usually from other countries, because they are imported or assembled from imported parts. In a typical home survey, a smaller number of items, mainly electronic items, come from abroad. This shows that our country still depends on other countries for technology goods.

Question: How do you think these items came to our country?

Answer: These items came to our country through international trade, by imports through sea ports, airports and land routes. Foreign companies and traders sell their goods to importers in Pakistan, who then supply

them to markets and shops. This movement of goods between countries is an example of interdependence and globalization.

Sustainable Development

Unit 2, Chapter 2: Global Warming and Climate Change

Exercise: ANSWER THE FOLLOWING QUESTION

Question: Briefly explain the greenhouse effect?

Answer: The greenhouse effect is the warming of the Earth when carbon dioxide and other pollutants, along with greenhouse gases, gather in the atmosphere. These gases absorb sunlight and solar radiation that would have bounced off the Earth's surface and escaped into space. The pollutants stay in the atmosphere for a long time, trapping heat and making the Earth warmer.

Question: Discuss how human influence climate change?

Answer: Human activities influence climate change mainly through the increased consumption of coal, oil and natural gas, which increases the concentration of greenhouse gases in the air. Industrialization has increased the production of cars, planes, power stations, factories and processing plants, which release more pollution. Because of these human activities, the climate faces more floods, droughts, hurricanes and extreme weather events.

Question: Write a note of how you rescue flood victims in your locality?

Answer: To rescue flood victims in my locality, I would first inform the elders, the local administration and rescue teams about the affected people. I would help children, elderly people and women to move to safe, higher places with their necessary belongings. I would also collect food, clean drinking water, clothes and medicines with the help of neighbours

and give first aid to injured persons until proper help arrives.

Question: What do you mean by ID?

Answer: By ID in this chapter we mean IDPs, that is, internally displaced populations (persons). These are people who are forced to leave their homes because of fighting, disasters or other emergencies but who stay within their own country. In Pakistan in 2008, many people in Malakand Division and the Federally Administered Tribal Areas became IDPs due to fierce fighting between government security forces and militants.

Exercise: Compare the following countries the developed and under developed. United Kingdom (UK) and Ethiopia.

Exercise: FILL IN THE BLANKS

Infrared radiation is sometimes called infrared light.

The three countries _____, _____, and _____ are badly hit by deadly hurricanes.

Answer: Cuba,, the USA,, China

The strongest hurricane that US has dealt with in 1935 was called _____.

Answer: the Labor Day Hurricane. The book states that the most powerful hurricane to hit the U.S. was the Labor Day Hurricane in 1935.

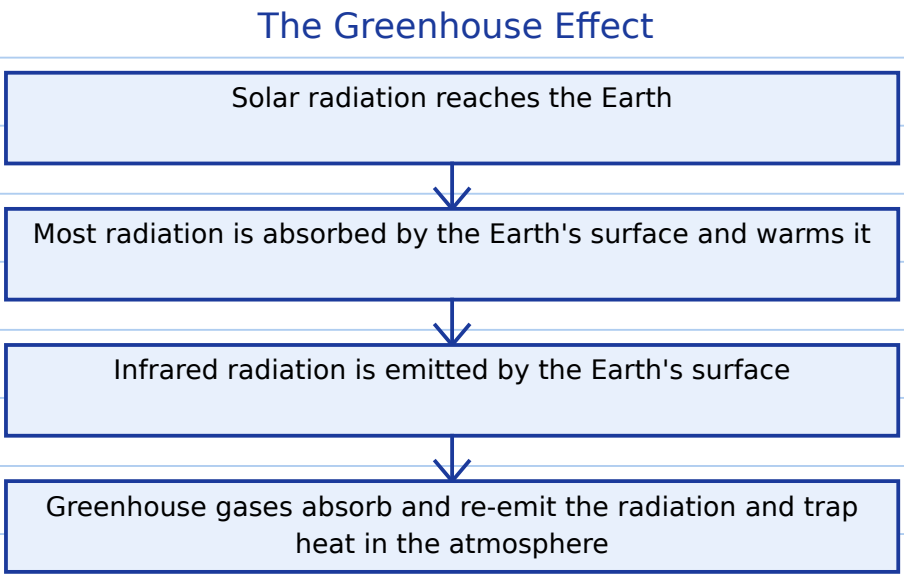

_____ is one of the largest humanitarian aid beneficiaries in the world.

Answer: Ethiopia

The 2010 floods in Pakistan affected 10 million children.

Exercise: CONDUCT AN INQUIRY: With the help of internet. Find out countries that have been affected by the natural disasters in current

decade

The Greenhouse Effect
Solar radiation reaches the Earth
Most radiation is absorbed by the Earth's surface and warms it
Infrared radiation is emitted by the Earth's surface
Greenhouse gases absorb and re-emit the radiation and trap heat in the atmosphere

Unit 2, Chapter 3: Scarcity of Water and Food Insecurity

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: How can we increase access to safe drinking water?

Answer: We can increase access to safe drinking water by building proper toilets and latrines that do not pollute our water. We can also teach people good hygiene habits through education, so that water sources stay clean. Setting up systems to collect and save rainwater for drinking, or for filling up underground water stores, also increases access to safe water.

Question: Write down any two strategies to increase access to safe drinking water?

Answer: The first strategy is to build proper toilets and latrines that do not pollute water sources, because sewage is the main reason for water contamination. The second strategy is to collect and save rainwater in tanks and reservoirs for drinking purposes. Both strategies are simple and can be applied in homes, schools and villages.

Question: Why many water supplies may be contaminated in urban areas such as Karachi?

Answer: Many water supplies are contaminated in urban areas such as Karachi because sewage, which includes human waste, gets into drinking water sources. Another reason is the harmful chemicals coming from factories, and the pesticides and fertilizers used in farming, which end up in water bodies. In crowded cities, leaking sewerage lines mix with water supply lines and make the water unsafe to drink.

Question: Can you suggest possible strategies to increase food production?

Answer: Food production can be increased by developing crop varieties that can endure tough conditions, such as rice that can handle salt and sorghums and millets that can withstand drought. Other strategies from the chapter are recycling nutrients in the soil by rotating crops, using genetic resistance in plants against pests and diseases, and encouraging mechanization in agriculture. Climate friendly crops should also be introduced to protect the agricultural environment.

Question: Discuss in detail how uneven distribution of food causes issues of food shortage?

Answer: The unequal sharing of food between wealthy and impoverished nations is due to the uneven distribution of resources, and this causes issues of food shortage. In many poor countries, families spend as much as 80% of their income on food, so if the prices of specific foods increase twofold, these families cannot afford them anymore. In southern Africa, prolonged droughts, major floods and disturbances in farming have also led to shortages in food production, so food does not reach the people who need it most.

Exercise: FILL IN THE BLANKS:

According to the survey report of 2018 _____% population of Pakistan has access to clean water.

Answer: 2018, 20%

Indian population has no access to safe drinking water around _____%.

Answer: 50%. The chapter states that India has the highest number of people without clean water in the world, so a very large share of its

population suffers from this problem.

Mozambique _____% of population has not access to water for attainment of their basic needs.

Answer: 45%

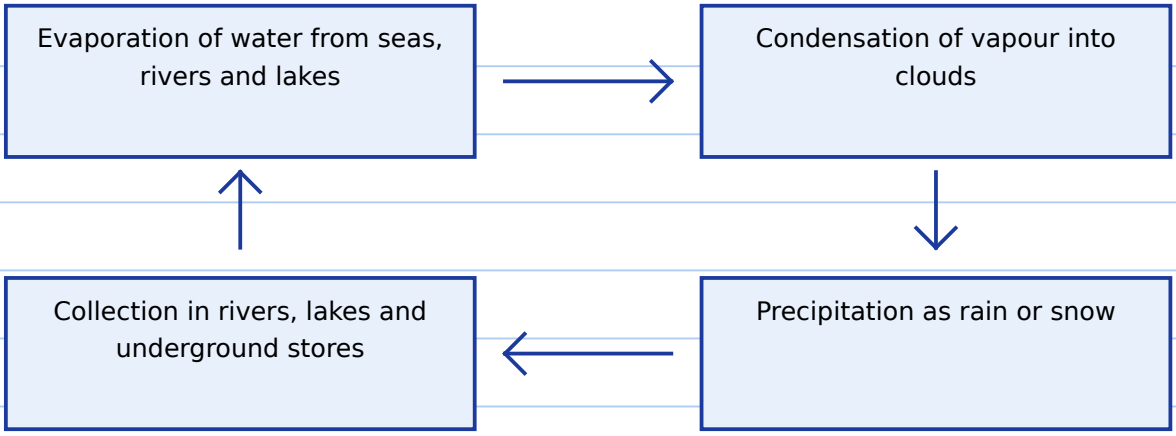

In Nigeria only _____% of population has access to safe drinking water.

Answer: 17%

In Papua New Guinea _____% population has access to safe drinking water.

Answer: 51%

The Water Cycle

Unit 2, Chapter 4: Interdependence

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: What are the needs for interdependence?

Answer: Interdependence is needed because no individual and no country can fulfil all of its needs alone. Some countries are rich in natural resources while others are specialized in technology, and many countries depend on others for labour force and trade routes. Therefore, people and countries depend on each other for food, goods, services and a good life, and globalization has made the world connected and interdependent.

Question: What has there been global corporation to help solve a natural disaster?

Answer: There has been global cooperation to help solve natural disasters, in which countries and international organizations help the affected people together. The UN and other organizations provide relief, rehabilitation, food, shelter and medical help in the disaster-hit areas. Such cooperation shows that a big disaster in one country becomes the concern of the whole world.

Question: How can you help people?

Answer: I can help people through my personal actions, such as making wise consumer choices and sharing resources with those who need them. I can also write petitions and letters, join relief activities and support organizations that work for the welfare of people. Even small actions by a small group or an individual in one place can affect and improve the life of people elsewhere.

Question: What was the oil prices after 1970?

Answer: After 1970, the oil prices went up a lot. Two huge events in the Middle East, the Yom Kippur War in 1973 and the Iranian Revolution in 1979, made oil from that area scarce. Countries that needed oil, such as Canada, Australia, New Zealand, the United States, Western Europe and Japan, did not have enough oil, so its prices rose greatly.

Question: How did mother Teresa help others?

Answer: Mother Teresa was a Catholic nun known for helping poor and sick people in Kolkata, India. She devoted her life to serving the poorest people, caring for the sick and giving them shelter, food and love. For this selfless work she won the Nobel Peace Prize in 1979 and later became a saint in the Catholic Church.

Question: How does the UN help different countries?

Answer: The UN helps different countries by keeping peace, making sure people's rights are respected and helping in emergencies. Since the 1990s, the UN and others have helped end many fights, such as in Sierra Leone, Liberia, Burundi, Sudan and Nepal, through talks and peacekeeping. The United Nations, started in 1945 with 193 member countries, works in this way to make the world better and more peaceful.

Exercise: FILL IN THE BLANKS

WFP stands for _____.

Answer: World Food Programme. It is the food-assistance organization of the United Nations, and the Nobel Peace Prize in 2020 went to the World Food Programme for helping to stop hunger and for trying to stop hunger from being used as a weapon in wars.

The Nobel Prize in Physiology or Medicine 2020 was awarded _____.

Answer: to Harvey J. Alter, Michael Houghton, and Charles M. Rice. They won it for finding the Hepatitis C virus, which is a bad sickness, as stated

in the chapter.

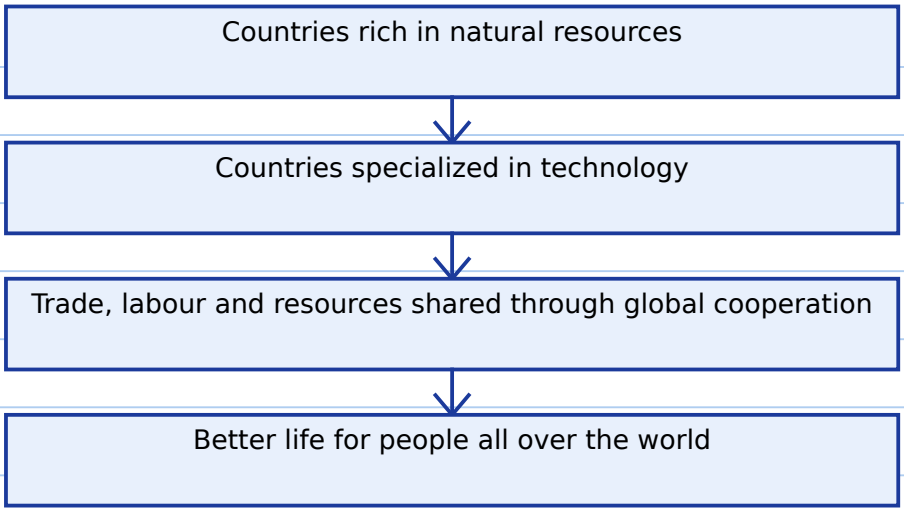

Green peace is a _____ Environmental organization.

Answer: non-governmental

Sheldon lee, Glashow, Abdus Salam and _____ received Nobel Prizes in 1979.

Answer: Steven Weinberg

Interdependence Among Countries

Unit 2, Chapter 5: The World of Air

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: What is air made up of?

Answer: Air is made up of a mixture of different gases like oxygen and nitrogen. Nitrogen is the most abundant gas and makes up 78% of the gases in the atmosphere, while oxygen and small amounts of other gases such as argon and carbon dioxide are also present. This mixture surrounds the Earth, and living things live and breathe in it.

Question: What are the four layers of the atmosphere?

Answer: The four layers of the atmosphere are the troposphere, the stratosphere, the mesosphere and the thermosphere. The troposphere is the layer nearest to the surface of the Earth, the stratosphere consists of ozone layers, and the thermosphere is the top layer where the air is hot but very thin. Above them, about 400 km above the Earth's surface, begins the exosphere.

Question: How are trade winds and surface winds different?

Answer: Trade winds are regular winds, also called tropical easterlies, which blow from high-pressure areas near the tropics towards the low-pressure area near the equator; they are called northeast trades in the Northern Hemisphere and southeast trades in the Southern Hemisphere. Surface winds, on the other hand, blow close to the Earth's surface and are slowed down by friction. Surface wind is measured at a height of 10 meters above the ground, with an anemometer for speed and a wind vane for direction.

Question: What is the difference between a wind vane and anemometers?

Answer: A wind vane is an instrument that shows the direction of the wind, that is, from which direction the wind is blowing. An anemometer, also called a wind speed meter, measures the speed of the wind. Both instruments are used together to study wind and weather conditions at a place.

Question: What direction does the wind move in a cyclone in the southern Hemisphere?

Answer: In a cyclone in the southern Hemisphere, the wind moves in a clockwise direction. The chapter explains that a cyclone spins counterclockwise in the Northern Hemisphere, so in the Southern Hemisphere its direction is opposite, that is, clockwise. A cyclone forms around a centre of low pressure and can bring heavy rain and strong winds.

Exercise: CHOOSE THE RIGHT RESPONSE

What is the most abundant gas in Earth's atmosphere? It makes up 78% of the gases.

(a) Oxygen

(b) Carbon Dioxide

(c) Argon

✓ (d) Nitrogen

What are the three main types of clouds?

✓ (a) Altostratus, Stratus, Cirrus Status

(b) Cumulus, Altocumulus, Cumulusnimbus

(c) Stratuscumlus, Cirrus, Cululus

Question: What statement can clearly explain the basic reason for Earth's seasons? (a) As the Sun moves away from Earth, the seasons will change. (b) As Earth revolves around the Sun, the seasons change. (c) As Earth

revolves around the Sun, Earth's tilt will result in either the Northern or Southern hemisphere getting more exposure from the direct rays of the Sun. (d) None of these are true.

Answer: (c)

Pressure decreases rapidly with altitude because the air becomes

(a) Colder.

✓ (b) Less Dense.

(c) Warmer.

(d) Rich in Ozone.

Meteorology is a science that studies the weather using a resource wisely so that it will not be used up is called

(a) Filtration.

✓ (b) Conservation.

(c) Distillation.

(d) Coagulation.

Most tornadoes form from

✓ (a) Thunderstorms

(b) Hurricanes

(c) Cyclones

Which of these heat transfer types is best described by the sentence? Air functions as a fluid and warmer air rises to transfer heat into the atmosphere.

(a) Air functions as a fluid and warmer air rises to transfer heat into the atmosphere.

✓ (b) Convection

(c) Conduction

(d) Radiation

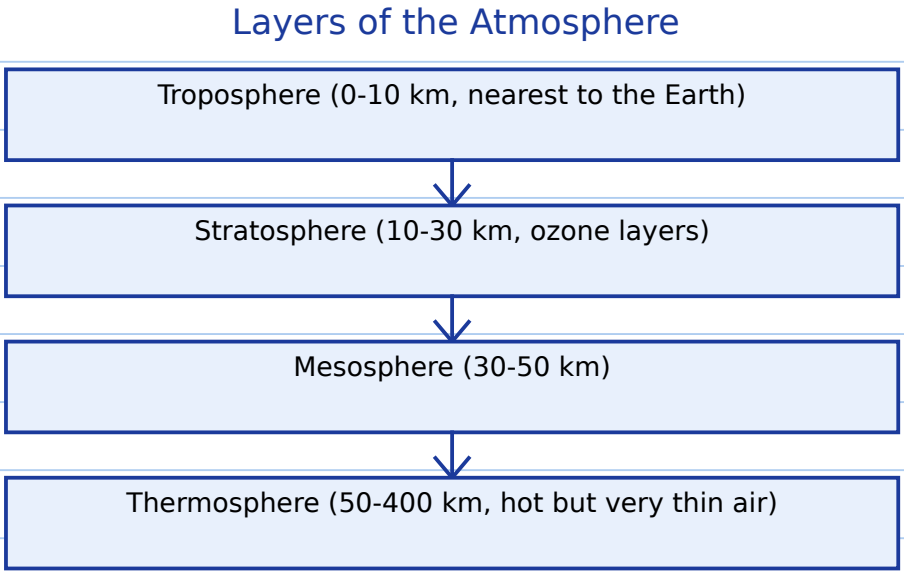

_____ is the thin layer of air that surrounds Earth.

(a) An axis

(b) The Moon

✓ (c) The atmosphere

(d) The climate

Unit 2, Chapter 6: Urbanization and Internal Migration

Exercise: FILL IN THE BLANKS.

Social push factors can include ethnic, _____, _____, and cultural persecution.

Answer: religious,, racial,

Urbanization is the process in which people tend to _____ to urban cities and _____ settle there.

Answer: migrate, permanently

High land that is mountainous e.g. Himalayas will have _____ density of population.

Answer: low

The more people are being attracted towards urban centres due to _____ opportunities.

Answer: economic

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: Explain the process of urbanization.

Answer: Urbanization is a continuous process in which more and more people migrate from rural and sub-urban areas to urban cities and permanently settle there. The process of urbanization is higher in areas where there are more economic opportunities and least stability in the rural settlements, and both push factors and pull factors play a vital role in it. As a result, small towns grow into big cities, metropolitan cities and a metropolis, and the population, area, structures and economic activity of the place increase.

Question: Analyse the impact of making road networks on humans.

Answer: Road networks connect cities with villages and other cities, so people can travel easily for jobs, education, trade and medical help. Better roads increase business and economic activity and help goods reach markets quickly, which improves the life of people. However, building roads also changes natural land, increases traffic, noise and air pollution, and more vehicles make cities hotter and more polluted, as described in the chapter.

Question: Enlist major factors that influence the movement of people around the world.

Answer: The major factors that influence the movement of people around the world are environmental factors, economic factors, social and political factors, and ecological factors. Environmental factors include natural disasters and human-made environmental problems, economic factors relate to jobs, unemployment and wages, and social and political factors include discrimination, wars and conflicts. All these factors are connected with each other and together affect migration.

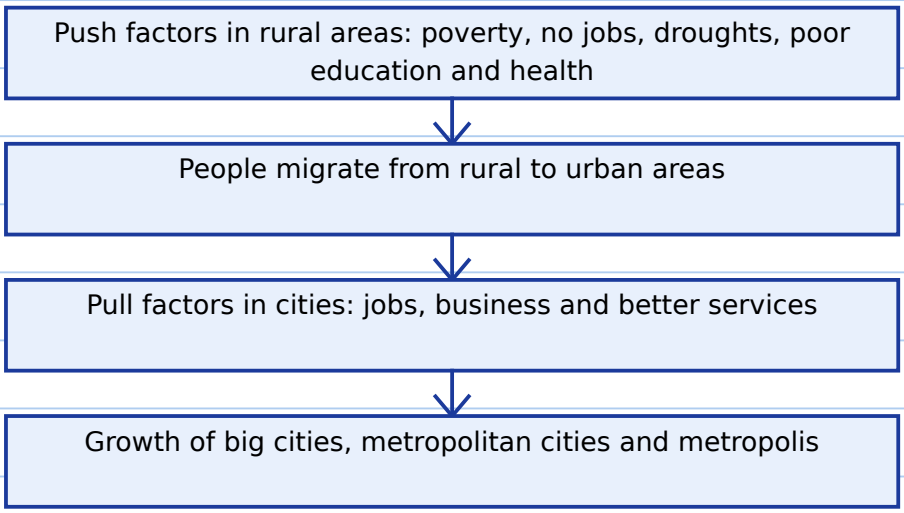

Question: Enlist the major problems of urban cities and suggest solutions for each of the problem.

Answer: The major problems of urban cities are shanty settlements, traffic jams, pollution, pressure on healthcare and educational facilities, and shortage of consumable resources and cleanliness. Shanty settlements can be reduced by proper city planning and low-cost housing, traffic can be controlled by better public transport and road planning, and pollution can be reduced by controlling factory smoke and vehicle emissions. Providing enough schools, hospitals, clean water and waste management according to the population can solve the remaining problems.

Question: Analyse the impact of push factors in the process of urbanization.

Answer: Push factors are the conditions in rural areas that force people to leave, such as poverty, unavailability of jobs, security issues, tribal clashes, water shortage and droughts, and problems related to education and health. Because of these factors, people migrate to urban cities for better employment and business opportunities, for example to Karachi, Lahore and Faisalabad from rural Punjab, KPK, Balochistan and the northern areas. In this way push factors speed up urbanization and make urban populations grow rapidly, which also creates new problems in the cities.

Process of Urbanization

Unit 3, Chapter 1: Government and Democracy

Exercise: CHECK YOUR KNOWLEDGE AND UNDERSTANDING — FILL IN THE BLANKS.

Democracy is a system where people form their government.

A King rules the state in monarchy political system.

Political parties are a group of people with similar _____ and opinions.

Answer: ideas

Saudi Arabia's political System is _____

Answer: monarchy (absolute monarchy).

A manifesto is very useful and an important benchmark for measuring the performance of a _____

Answer: political party.

The party organization is the formal structure of the political party.

Left-wing political refers to liberal political views.

Pakistan is a representative democracy.

_____ is government in which a collection of individuals rules over a nation.

Answer: Oligarchy

"_____ is the government of the people by the people for the people."

Answer: "Democracy

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: Suggest the role citizens can play in the development of democracy in Pakistan.

Answer: Citizens can strengthen democracy by voting honestly in every election and by choosing capable, honest candidates instead of voting only on family, caste or party pressure. They should stay informed, discuss public issues, pay taxes, obey the law and hold their elected representatives accountable. When citizens take part in community meetings and respect the rights of others, democracy becomes stronger and more stable.

Question: Describe the five changes that if made would improve democracy in Pakistan.

Answer: Five useful changes are: holding completely free, fair and regular elections; applying the rule of law equally to leaders and ordinary people; making the judiciary fully independent and free of corruption; ensuring accountability and transparency through a free press and open government; and increasing the participation of citizens, especially women and minorities, in politics. These changes follow the principles of democracy given in this chapter. Together they would make the government answerable to the people it represents.

Question: Identify the possible positive and negative consequences of each change.

Answer: Free and fair elections increase public trust, but powerful groups may resist losing influence. Equal rule of law and an independent judiciary protect citizens and reduce corruption, although reforms are slow and may be opposed by those who benefit from the old system. Accountability and a free press expose wrongdoing and improve policies, yet false news and political pressure can create difficulties. Wider participation of women and

minorities makes policies fairer for families and communities, but it needs time, education and a change in old attitudes.

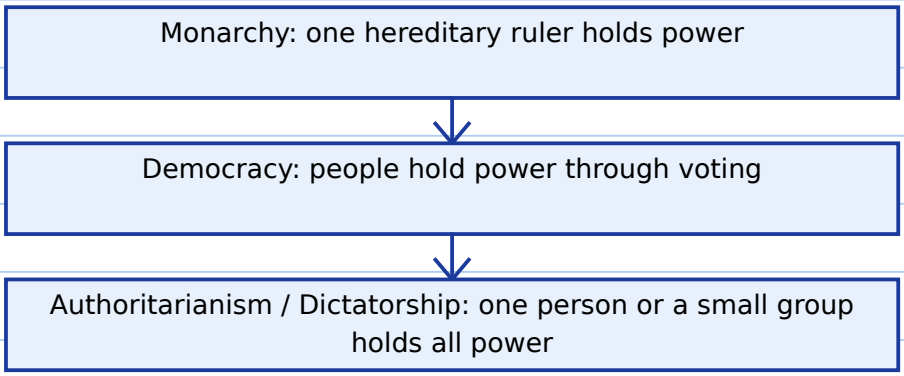

Question: Explain the basis for different forms of the government around the world.

Answer: Different forms of government arise mainly from who holds power and how that power is obtained. In a monarchy power is inherited by a king or queen, in a democracy power comes from the people through voting, and in authoritarian systems or dictatorships power is held by one person or a small group, often taken by force. History, culture, religion and the needs of each country also shape which form of government it adopts.

Question: Compare the role of citizens in monarchy, democracy and authoritarian regimes.

Answer: In a monarchy only a few people take part by advising the monarch, and ordinary citizens have little say in decisions. In a democracy citizens take a full part by voting, running for office and enjoying basic individual rights. In authoritarian regimes people have limited political freedom, cannot criticize or oppose the government, and are expected to obey authority and join only government-organized activities.

Main political systems — who holds power

Exercise: CONDUCT AN ENQUIRY

Question: Search following information on the internet. Write at least two

names of corresponding countries against each type of political system. Political System Monarchy — Type Absolute / Constitutional; Democracy — Type Representative / Direct.

Answer: Monarchy — Absolute: Saudi Arabia and Oman. Monarchy — Constitutional: the United Kingdom and Japan. Democracy — Representative: Pakistan and India. Democracy — Direct: ancient Athens was the classic example of direct democracy, and in modern times Switzerland uses direct democracy through referendums on many issues.

Question: What are the benefits of living in a democracy? Come up with at least three specific examples.

Answer: First, people can choose and change their rulers through free elections, for example by voting in general elections in Pakistan. Second, citizens enjoy basic rights such as freedom of speech and a free press, so they can criticize wrong policies without fear. Third, everyone is equal before the law and courts are independent, so even a common citizen can get justice against a powerful person.

Exercise: COOPERATE WITH OTHERS

Question: You have read this chapter. Now, work in two groups. One group should collect information about direct democracy (Athens) and other group should collect information about representative democracy. Write the name of countries in which these two democracies exist.

Answer: In direct democracy, as in ancient Athens, citizens themselves make the laws and policies and take part in every stage of decision-making. In representative democracy, people elect representatives who make laws on their behalf, as in Pakistan, India and the United Kingdom. Direct democracy suits small communities, while representative democracy is practical for large modern countries.

Question: Discuss in two groups the attributes of democracy fall in Pakistan.

Answer: Pakistan has the main attributes of democracy: an elected parliament, regular general elections, a written constitution, political parties and a free media. Citizens can vote, express opinions and approach independent courts for their rights. However, democracy in Pakistan still needs strengthening through stronger rule of law, less corruption and greater public participation.

Unit 3, Chapter 2: Governing the World

Exercise: CHECK YOUR KNOWLEDGE AND UNDERSTANDING — FILL IN THE BLANKS.

A set of rules which have derived by treaties followed by states is known as _____

Answer: international law.

There are six organs of UNO.

ICJ stands for _____

Answer: International Court of Justice.

The aim of UNO is to maintain _____ and _____

Answer: peace, security in the world.

UNO was formed in 1945.

ICJ stands for _____

Answer: International Court of Justice.

UNICEF stands for _____

Answer: United Nations International Children's Emergency Fund.

ILO stands for _____

Answer: International Labour Organization.

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: Describe the applicability of the International Law on the countries?

Answer: International law is a set of rules and customs that guides how countries deal with each other, and it becomes effective when countries

agree to follow it through treaties and agreements. It applies to all states in matters such as peace, trade, borders and human rights, and it increases cooperation and unity among them. Countries that sign a treaty are expected to honour it, although powerful countries sometimes pressure smaller ones to comply.

Question: What are the main functions of the Security Council?

Answer: The Security Council works to maintain peace in the world and to prevent war between nations. It arranges dialogue between disputing nations so that their conflicts are settled peacefully. If a country does not obey its decisions, the Council can impose restrictions on trade and money, stop the sale of weapons, limit relations, and, as a last resort, allow the use of force.

Question: How International Court of Justice is providing relief/justice to the people of world?

Answer: The International Court of Justice, the World Court, settles legal disputes between countries according to international law, so conflicts are decided by law instead of war. Its fifteen judges, chosen for nine years by the General Assembly and the Security Council, also give legal advice to UN organs and agencies. Countries must agree to take part in a case, and the Court's decisions help protect the rights and interests of nations and their people.

Question: How effective the United Nations is?

Answer: The United Nations has been quite effective in preventing a third world war, settling many disputes peacefully and helping people through its agencies in health, food, education and children's welfare. Its funds and programmes reach every corner of the globe, from disaster relief to refugee protection. However, its effectiveness is limited when big powers use the veto in the Security Council or when member countries refuse to

follow its decisions.

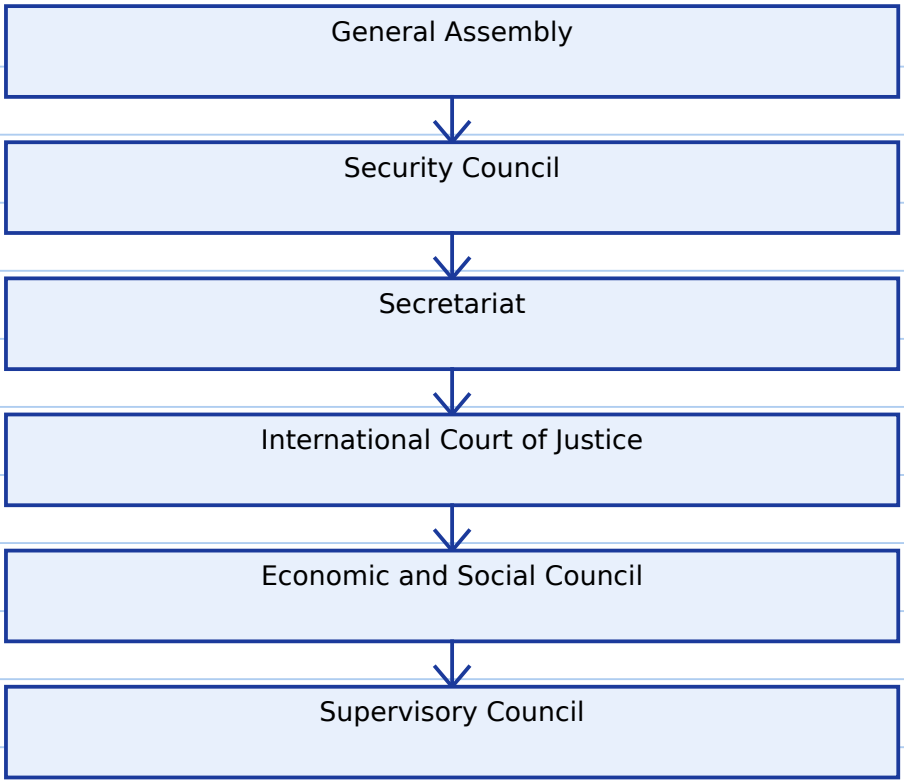

Question: How and why U.N was established?

Answer: The idea of the United Nations arose during the Second World War, when leaders wanted an organization to save future generations from the horrors of war and to protect basic human rights. After the Atlantic Charter of 1941 and several conferences, fifty countries signed the UN Charter at San Francisco in June 1945, and the United Nations came into being on 24 October 1945. Its headquarters are in New York, and its purpose is to keep the world peaceful and secure.

Question: Describe the responsibilities of main organs of the U.N.

Answer: The General Assembly, in which all member countries sit, discusses world peace and safety, approves the UN budget and elects the temporary members of the Security Council. The Security Council maintains peace and settles disputes, the Secretariat under the Secretary-General runs the UN's daily work, and the International Court of Justice decides legal disputes between countries. The Economic and Social Council deals with economic, social, cultural and humanitarian problems, while the Supervisory Council supervises territories handed over to the UN until a final decision is made about them.

The six organs of the United Nations

Exercise: CONDUCT AN ENQUIRY

Question: Importance of international laws in maintaining peace and order in the world.

Answer: International laws give all countries common rules for solving disputes, so disagreements are settled by talks and courts instead of by war. They create coherence and trust among states and unite them on a common agenda of peace. Because countries have agreed to these laws through treaties, they feel bound to respect each other's borders, rights and agreements.

Question: Role of U.N and the Kashmir Issue

Answer: The United Nations took up the Kashmir issue soon after the partition of the subcontinent, and the Security Council passed resolutions calling for a peaceful settlement of the dispute. These resolutions proposed that the people of Kashmir should decide their future through a

free plebiscite held under UN supervision. UN military observers have also been present in the region to watch the ceasefire, and the UN continues to urge Pakistan and India to solve the issue peacefully through dialogue.

Question: Do an inquiry to find out the role and functions of one of the UN agencies.

Answer: UNICEF, the United Nations Children's Fund, looks after the health and general welfare of children in all parts of the world. It surveys the conditions of children in backward areas and provides relief in the shape of medicines, milk powder, readymade clothes and support for education and nutrition. Through its work, poor and sick children get a better chance of a healthy and safe childhood.

Exercise: COOPERATE WITH OTHERS

Question: Hold a mock session of the U.N Security Council and discuss the Kashmir Issue.

Answer: In a mock session, students acting as Security Council members present the issue, hear both sides and speak for a peaceful solution. The discussion shows that the Council's duty is to prevent conflict and to settle disputes through talks, ceasefire and respect for the wishes of the people concerned. Such an activity also teaches students how international decisions are debated and passed by voting.

Question: Prepare a chart of member countries of the U.N.

Answer: A chart of UN member countries lists the states that have accepted the UN Charter and sit in the General Assembly, arranged by region such as Asia, Africa, Europe and the Americas. Pakistan is a member from Asia, along with countries such as India, China, Saudi Arabia and Bangladesh. Almost all the recognized countries of the world are now members, which shows the universal character of the organization.

Question: Listed below are the few problems/ issues. If these problems or issues affect the Pakistan, write or no in the Column "A". Come up with another country that same problems affect, and write the name of that country that says affects this country (Column B): 1. Global Warming 2. Lack of fresh water 3. Child Labour 4. Extremism 5. Early Marriage

Answer: 1. Global Warming — Yes, affects Pakistan; also affects the Maldives. 2. Lack of fresh water — Yes, affects Pakistan; also affects Egypt. 3. Child Labour — Yes, affects Pakistan; also affects India. 4. Extremism — Yes, affects Pakistan; also affects Afghanistan. 5. Early Marriage — Yes, affects Pakistan; also affects Bangladesh.

Unit 3, Chapter 3: Human Rights and Role as Global Citizens

Exercise: CHECK YOUR KNOWLEDGE AND UNDERSTANDING — FILL IN THE BLANKS

Magna Carta was presented in the year 1215.

Bill of Rights was passed in 1689.

Universal Declaration of Human Rights was adopted in 1948.

Fundamental rights are guaranteed under the Constitution of the country.

A responsible citizen is called one who abide by the law of the land, pay taxes timely and _____

Answer: respect the rights of others.

Exercise: ANSWER THE FOLLOWING QUESTIONS:

Question: What is meant by Human Rights?

Answer: Human rights are the basic rights and freedoms that belong to every person in the world, from birth until death. They are based on shared values like dignity, fairness, equality and respect, and they are defined and protected by law. Every person has these rights regardless of caste, culture, race or creed, and nobody can take them away.

Question: UDHR stand for?

Answer: UDHR stands for Universal Declaration of Human Rights. It was prepared by more than fifty countries and adopted by the United Nations in 1948 after the Second World War. It lists, for the first time, the basic rights and freedoms that all people in the world should have.

Question: What is the difference between legal and moral responsibilities?

Answer: A legal responsibility is a duty that a person must perform because it is required by the laws of the country, and the government enforces it. A moral responsibility is something a person should do because their own sense of what is good and fair tells them it is right. If a person does not perform a legal duty, they can be punished by the law of the state, whereas a moral duty comes from one's own values and conscience.

Question: What are the responsibilities of a global citizen?

Answer: A global citizen should ensure that everyone is aware of the rights they have and help others achieve and enjoy their human rights. This includes speaking out for things that matter, supporting groups that protect human rights, listening to the stories of others and taking a stand against discrimination. A global citizen also chooses goods that are made fairly and ethically and stays in touch with social causes and groups.

Question: Discover the history of human rights.

Answer: The foundation of human rights was laid when King Cyrus conquered Babylon in 539 BC and declared that all people had the right to choose their own religion, establishing racial equality. In Britain, important developments included the Magna Carta in 1215, the Habeas Corpus Act in 1679 and the Bill of Rights in 1689. After the terrible events of the Second World War, the United Nations adopted the Universal Declaration of Human Rights in 1948 to protect the basic rights of all people.

Exercise: MATCH THE COLUMN: Match column A with their corresponding meaning in the column-B and write the answer in Column-C. First one has been done as an example.: Column-1 : 1. Universal 2. Human 3. Inalienable 4. Indivisible 5. Interrelated — Column-2 : A human is born with the Human Rights and no one in no place or in any circumstances can remove, bar or undo these rights in any manner. / The human rights cannot be divided partially nor can the human in it be divided based on the caste, creed, colour, culture and/or beliefs. / The Human Rights stated in the UDHR are universal and equally applicable to all humans in every place in this universe. / Every human being regardless of caste, creed, colour, sex, gender, religion or economic status. / All human rights are interrelated and interdependent on each other. All rights declared in UDHR shall be guaranteed through law without exception.

Exercise: CONDUCT AND INQUIRY

Question: Explore how the fundamental rights can be ensured in your neighbourhood. Make a list of rights that need to be provided to everyone in your surroundings.

Answer: Fundamental rights in a neighbourhood can be ensured when people know their rights, treat each other equally and report violations to the authorities or courts. Rights that must be provided to everyone include the right to life and security, education, health care and clean water, freedom of religion and opinion, and protection from discrimination and forced labour. Local government, schools and community elders should work together so that no one in the surroundings is denied these rights.

Exercise: COOPERATE WITH OTHERS

Question: Work in two groups and Role play as government minister and

civil society or Active citizen. Group A should play role of a minister in provision of all the fundamental rights guaranteed in Constitution of Pakistan and Group B should play role of Active Citizens or Civil society to include entire UDHR as fundamental rights in constitution.

Answer: As a minister, Group A explains that the government provides the fundamental rights guaranteed in the Constitution of Pakistan, such as education, security of life and equality before law, through laws, courts and public services. As active citizens, Group B argues that all the rights of the UDHR, including social and economic rights, should also be protected as fundamental rights. The role play shows that governments provide rights while civil society keeps reminding them of their duty and demands wider protection for everyone.

Unit 3, Chapter 4: Children's Rights

Exercise: CHECK YOUR KNOWLEDGE AND UNDERSTANDING — FILL IN THE BLANKS.

The child is a growing future _____, who has no means to _____ themselves.

Answer: adult,, protect

Children's rights were recognised with the adoption of the _____, in 1924.

Answer: Declaration of Geneva,

The Child rights in the Convention fall into three categories i.e. protection, _____, and _____.

Answer: provision,, participation.

A convention can be understood as _____ among countries to act in a particular manner.

Answer: an agreement

Exercise: ANSWER THE FOLLOWING QUESTIONS:

Question: Explain why due rights of children are not protected despite CRC and UDHR?

Answer: Although the CRC and the UDHR give children clear rights, these rights are still not protected in many places because of poverty, ignorance and weak enforcement of laws. Many families are forced by poverty to send their children to work instead of school, and many people do not even know that children have special rights. Child labour, early marriage and abuse therefore continue, especially where governments and citizens do not fulfil their responsibilities.

Question: How convention on children's rights can help governments to formulate their policies towards children.

Answer: The Convention on the Rights of the Child gives governments a clear framework of the rights every child must receive, so they can base their laws and policies on it. Its guiding principles — non-discrimination, the best interest of the child, survival and development, and participation — guide every policy concerning children. Governments can use it to make laws on education, health, protection from labour and abuse, and to check whether their policies are really benefiting children.

Question: Explain how education can put an end on child labour?

Answer: Education takes children out of workshops, factories and homes where they work and places them in schools, where they are safe and free to enjoy childhood. Educated children learn skills for better jobs as adults, so they are not trapped in low-paid labour for life. Education also bridges economic and social gaps by giving everyone an equal opportunity at a good life, and if all grown-ups reached at least secondary school, poverty could be cut by more than half.

Question: How citizens can play their role in protection of child rights in Pakistan?

Answer: Citizens can protect child rights by not employing children in homes, shops or factories, and by discouraging others from doing so. They should send their own children to school, spread awareness about children's rights and support organizations working for children. If they see child abuse or labour, they should report it to bodies such as the Sindh Child Protection Authority, which was established in 2011 to eliminate child abuse and violence against children.

Exercise: CONDUCT AN ENQUIRY:

Question: Conduct an enquiry about the current state of child labour in Pakistan by searching on internet, newspapers and magazines. Look for victims of child labour and make list of them.

Answer: Enquiries from newspapers and reports show that child labour is still common in Pakistan in carpet factories, workshops, brick kilns, agriculture, shops and domestic work. Its main causes are poverty, large families, lack of schools and weak enforcement of laws that fix a minimum age for work. The story of Iqbal Masih, who was sold as a bonded labourer to a carpet factory, escaped at the age of eleven and spoke for working children everywhere, shows how serious this problem is.

Question: Write letters to editors of newspapers. Encourage public to raise voice against child labour.

Answer: Dear Editor, Through your newspaper I request the public to raise its voice against child labour, which steals the childhood, education and health of poor children. Every child has the right to go to school and to be protected from hazardous work under the Convention on the Rights of the Child. I appeal to readers not to employ children, to support working children to return to school, and to report child labour to the authorities. Yours faithfully, A Concerned Student.

Question: Write to Sindh Child Protection Authority, Government of Sindh and highlight child labour practice in your town and request to take notice of this practice.

Answer: To the Sindh Child Protection Authority, Government of Sindh. Subject: Request to take notice of child labour in our town. Respected Sir/Madam, I wish to draw your attention to the practice of child labour in our town, where young children are working in workshops, shops and homes instead of going to school. This is against the rights of children and the laws of Sindh, so I request your authority to kindly take notice of this practice, rescue these children and help them get education. Yours faithfully, A Student of Class 8.

Exercise: COOPERATE WITH OTHERS

Question: Read the 3Ps of rights again and work together in groups of three. Each group of students should prepare a vein chart on each P and share with your classmates.

Answer: The 3Ps are protection, provision and participation. Protection covers rights against abuse and neglect, economic and sexual exploitation and harmful substances; provision covers education, health care and basic economic welfare; and participation covers freedom of thought, conscience and religion and a voice in matters that affect the child. A chart on these three heads shows that a child needs safety, basic needs and a voice together for full development.

Question: Prepare a convention on classroom rights. Discuss with your senior school mates about convention on classroom rights. Prepare an agreement and get it signed by Class Representatives (CR).

Answer: A classroom rights convention can state that every student has the right to learn without disturbance, to be treated with respect, to

express an opinion, to be safe from bullying and to get equal chances to take part in class activities. Students also accept duties, such as respecting teachers and classmates and keeping the classroom clean. When such an agreement is discussed, written and signed by the Class Representatives, it works like the CRC in small form and teaches students how conventions protect rights.

Unit 3, Chapter 5: Role of Political Parties

Exercise: CHECK YOUR KNOWLEDGE AND UNDERSTANDING — FILL IN THE BLANKS

PPP stands for _____

Answer: Pakistan Peoples Party.

PTI stands for _____

Answer: Pakistan Tehreek-e-Insaf.

ANP stands for _____

Answer: Awami National Party.

PML-N stands for _____

Answer: Pakistan Muslim League-Nawaz.

JI stands for _____ Jamaat-e-Islami.

Exercise: SHORT QUESTIONS.

Question: What is a political party?

Answer: A political party is a group of people who share similar ideas about how a country should be run and work together to win elections and run the government. Its members contest elections, form or oppose the government and try to put their programme into practice. Political parties are essential for a modern democracy because they organize the way a country is governed.

Question: What is manifesto?

Answer: A manifesto is a public statement in which a political party or candidate tells everyone what they want to do if they win the upcoming election. It is a well-written and well-defined list of promises that is

circulated among voters and supporters to attract their commitment and loyalty. It helps people understand what a party wants to achieve and how it plans to do it in the future.

Question: What are elections?

Answer: Elections are the process through which citizens choose their representatives by voting. Through elections the party or candidate that wins the most support forms the government for a fixed period. Free and fair elections are the foundation of democracy because they give power to the government with the consent of the people.

Question: What is parliament?

Answer: Parliament is the elected law-making body of a country, made up of the representatives chosen by the people in elections. It makes and passes laws, approves the budget and keeps a check on the work of the government. In Pakistan, parliament consists of the National Assembly and the Senate.

Question: What is democratic government?

Answer: A democratic government is a government of the people, by the people and for the people, in which citizens govern themselves through their elected representatives. It works on principles such as rule of law, respect for human rights, political equality and accountability to the public. People can change such a government peacefully through elections if it does not perform well.

Exercise: CONDUCT AN INQUIRY

Question: Make a list of political parties participating in local, provincial and national assembly in your area. Also write the names of local leaders of these parties living in your constituency.

Answer: The main political parties participating at local, provincial and

national level in most areas of Sindh and Pakistan include the Pakistan Peoples Party, Pakistan Muslim League-Nawaz, Pakistan Tehreek-e-Insaf, Awami National Party, Jamaat-e-Islami and other regional parties. Their local leaders are the party office-bearers, councillors and the elected MPA and MNA of that particular constituency. Students should write the names of these leaders from their own constituency after enquiry, because they differ from area to area.

Exercise: COOPERATE WITH OTHERS

Question: Form 5 groups in the class. Each group shall elect a MPA or MNA. Write the letter MPA, MNA. to inform him/her about the issues of your community or neighbourhood.

Answer: Dear MNA/MPA, I am a student and a resident of your constituency, and I wish to inform you about two serious issues of our neighbourhood: the supply of clean drinking water is irregular and many streets are damaged and without lights. These problems affect the health and safety of all residents, especially children going to school. I respectfully request you to kindly take up these issues in the assembly and arrange early action, for which our whole community will be grateful. Yours faithfully, A Student of Class 8, on behalf of the residents of the neighbourhood.

Unit 4, Chapter 1: Markets and Prices

Exercise: Choose the best answer of the following questions:

1. An increase in the price of a product will reduce the amount of it purchased because:

(a) supply curves are upsloping.

(b) the higher price means that real incomes have risen.

✓ (c) consumers will substitute other products for the one whose price has risen.

(d) consumers substitute relatively high-priced for relatively low-priced products.

2. Which of the following will not cause the demand for product K to change?

(a) a change in the price of close-substitute product J

(b) an increase in consumer incomes

✓ (c) a change in the price of K

(d) a change in consumer tastes

3. When supply falls, what happens to quantity demanded in equilibrium?

(a) Quantity demanded increases

✓ (b) Quantity demanded decreases

(c) A change in supply has no effect on quantity demanded

4. A shortage in a market occurs

✓ (a) where the market equilibrium price leads to quantity demanded being greater than quantity supplied.

(b) where the number of producers is fewer than the number of consumers.

(c) none of the above.

5. A surplus in a market can occur without price changing

✓ (a) True

(b) False

6.1 The following questions refer to the diagram in the book, which illustrates a consumer's demand curve for a good (price $40 at zero quantity, falling to $0 at 20 units). If the price of this good is $30, what quantity will be demanded?

✓ (a) 5 units.

(b) 10 units.

(c) 15 units.

(d) 20 units.

6.2 If the price of this good is $20, what quantity will be demanded?

(a) 5 units.

✓ (b) 10 units.

(c) 15 units.

(d) 20 units.

6.3 If the price of this good is $20, what will consumer surplus equal?

✓ (a) $100.

(b) $200.

(c) $300

(d) $400.

6.4 If the price of this good falls from $30 to $20, but the consumer is prohibited from buying more than 5 units of the good, by how much will consumer surplus increase?

(a) $100.

(b) $75.

✓ (c) $50

(d) $25.

Exercise: Answer the following questions:

Question: i. If the prices of goods are high, how consumers shall react? Discuss in detail.

Answer: When prices are high, consumers buy less of the expensive good because of the law of demand. They look for cheaper substitute products, postpone unnecessary purchases, and spend their limited income more carefully on basic needs. In this way, high prices reduce the quantity demanded in the market.

Question: ii. How shortage of certain goods is happening in the market and suggest measures to control the shortages.

Answer: A shortage happens when, at the existing price, the quantity demanded is greater than the quantity supplied, for example when production falls, imports are delayed, or demand suddenly increases. It can be controlled by increasing production and supply, removing barriers to imports, and stopping hoarding. The price may also be allowed to rise a little so that demand falls and supply increases until balance is restored.

Question: iii. List the possible positive and negative effects of surplus of goods and services in the market.

Answer: A surplus means more goods are supplied than demanded at the current price. Its positive effect is that prices tend to fall, so consumers can buy goods more cheaply and in greater quantity. Its negative effects are that producers earn less profit, unsold stock is wasted, and firms may cut production and jobs.

Question: iv. How prices, demand and supply of goods and services would be under control? Explain in detail.

Answer: In a market economy, prices, demand and supply control each other through the market forces. If demand rises or supply falls, the price

rises, which discourages buyers and encourages producers to supply more. If there is a surplus, the price falls, which increases demand and reduces supply until the market reaches equilibrium, where quantity demanded equals quantity supplied.

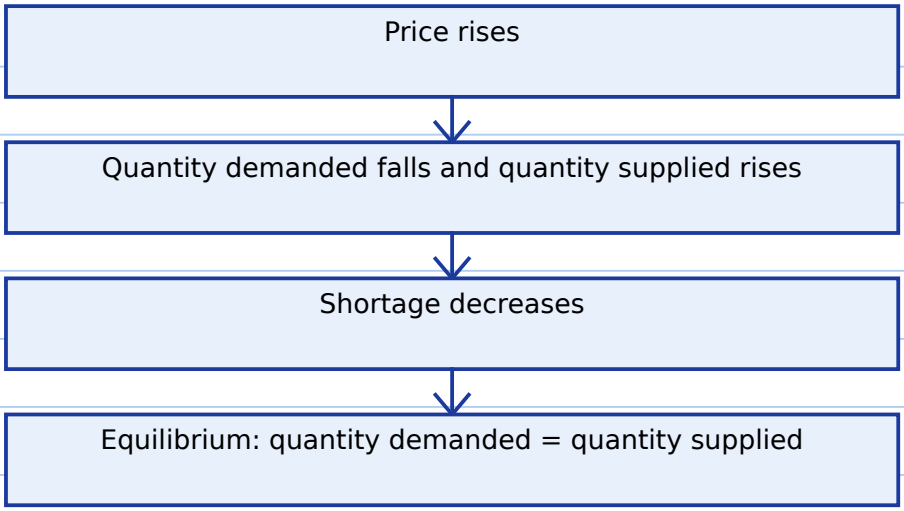

Question: v. When prices change, how is that reflected on a given supply or demand curve? For instance, if the price of a particular chocolate bar increases, will demand or quantity demanded change? Explain.

Answer: A change in the price of the good itself causes a movement along the same demand or supply curve; the curve does not shift. If the price of the chocolate bar increases, its quantity demanded will decrease, shown by a movement up along the demand curve. The demand itself changes only when other factors, such as income, tastes, or the price of substitutes, change.

Question: vi. The following table gives the daily supply and demand for Eggs at funfair event: Price $2.10 — Quantity demanded 800, Quantity supplied 7,200; Price $1.80 — Quantity demanded 1,600, Quantity supplied 4,800; Price $1.60 — Quantity demanded 2,400, Quantity supplied 2,400; Price $1.40 — Quantity demanded 3,200, Quantity supplied 800; Price $1.20 — Quantity demanded 4,100, Quantity supplied 200. a) What is the equilibrium price of Eggs? What makes you think so? b) If the organizers of the funfair event decide to set the price at 1.80, how many Eggs will be sold?

Answer: a) The equilibrium price is $1.60, because at this price the quantity demanded (2,400 eggs) is exactly equal to the quantity supplied (2,400 eggs), so there is neither a shortage nor a surplus. b) At $1.80, sellers offer 4,800 eggs but buyers want only 1,600 eggs, so only 1,600 eggs will be sold and the rest will remain unsold as a surplus.

How the market reaches equilibrium

Unit 4, Chapter 2: International Trade

Exercise: Fill in the blanks:

i. In ancient barter system, the trade was done by _____.

Answer: direct exchange of goods and services.

ii. In the modern and global era, the goods and services are first delivered to the _____ in huge quantity.

Answer: wholesaler

iii. The Selling goods and services from domestic country to other countries is known as _____ trade.

Answer: export

iv. The bringing goods and services from other countries to the home country is called _____ trade.

Answer: import

v. Importing goods from one country and exporting it to another country after adding some value to it is known as _____ trade.

Answer: entre-pot

vi. The difference between the value of exports and imports of any country in a given time frame is _____.

Answer: balance of trade.

Exercise: Answer the following questions:

Question: i. Differentiate between domestic and international Trade? Write down any five benefits of International Trade.

Answer: Domestic trade takes place within the borders of one country, using its own currency and rules, while international trade takes place between different countries, using foreign exchange and international

rules. Five benefits of international trade are: countries specialize in goods they produce best (comparative advantage); large-scale production lowers the cost per item (economies of scale); competition improves price and quality; technology is transferred from developed to developing countries; and more jobs are created in trading countries.

Question: ii. Discuss why countries trade when they have all the resources to meet their needs?

Answer: Even a country that has all kinds of resources cannot produce everything most cheaply and efficiently. Through trade, it specializes in the goods it produces at the lowest cost and imports other goods more cheaply from abroad. Trade therefore gives its people a greater variety of better-quality goods at lower prices and raises the country's income and living standards.

Question: iii. Analyse how trade deficit of Pakistan is increasing day by day?

Answer: Pakistan's trade deficit is increasing because its imports are growing much faster than its exports. Pakistan imports expensive items such as petroleum products, machinery, iron and steel and edible oil, while its exports are limited to a few items like cotton products and rice. Rising population, energy needs and low value addition in local industry further widen the gap between imports and exports.

Question: iv. Suggest how Pakistan can increase exports and decrease its imports?

Answer: Pakistan can increase exports by improving the quality of its products, adding value to items like textiles and food, finding new markets, and supporting industries such as sports goods, surgical instruments and information technology. Imports can be decreased by producing more goods locally, saving energy, and reducing the import of

luxury items. Government support, better technology and skilled workers are needed for both aims.

Question: v. What are the challenges of trade (domestic and international) to consumers and producers?

Answer: Consumers may face higher prices because of tariffs and import limits, and local markets can be disturbed by global events such as trade wars. Producers, especially new and small companies, find it hard to compete with big foreign firms and may lose sales and profit. Over-dependence on imports can also drain natural resources and threaten jobs and national security.

Question: vi. Describe the contributions Regional Trade Agreements in the World.

Answer: Regional Trade Agreements (RTAs) reduce trade barriers between member countries and increase trade within the region. Examples include the China-Pakistan Free Trade Agreement (CPFTA), NAFTA, ASEAN, the Trans Pacific Partnership (TPP) and the Regional Comprehensive Economic Partnership (RCEP). In South Asia, SAARC formed SAPTA in 1993 and SAFTA in 2006, while the European Union has the highest regional trade integration in the world.

Question: vii. Describe how their daily lives would be affected if people of Pakistan did not trade with people of other countries.

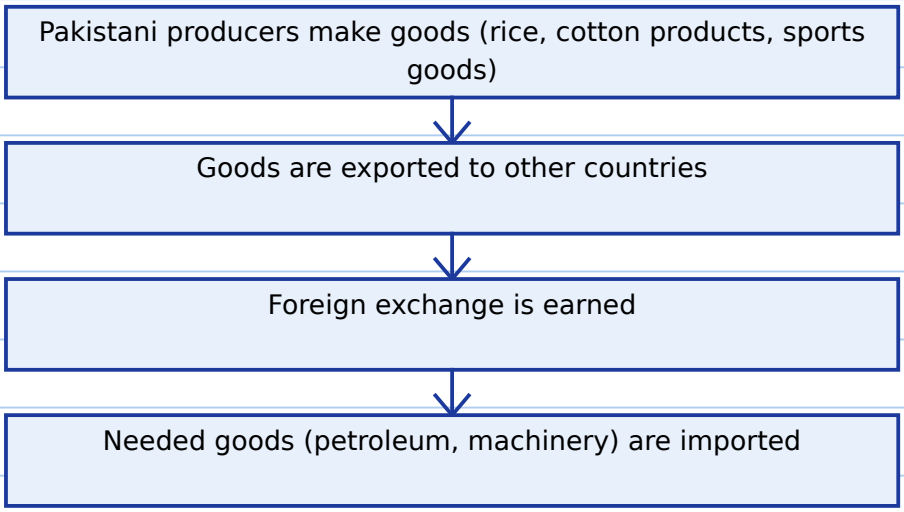

Answer: Without international trade, many goods used daily in Pakistan, such as petroleum, machinery, medicines, tea and edible oil, would be unavailable or very expensive. People would have to rely only on local products, so choice and quality would fall. Export industries would also close down, jobs would be lost, and the standard of living would decline greatly.

Question: Cooperate with others: Group A (whole seller) buys note books

and pencils from Group B (manufacturer) at the final deal price of Rs. 18 for each note book and Rs. 3 for each pencil, and will sell them at Rs. 25 per note book and Rs. 5 per pencil to the end customers. Identify the gains in terms of profit for Group A (whole seller) and Group B (manufacturer) as a result of trade.

Answer: Group A, the wholesaler, gains Rs. 7 on each note book (Rs. 25 − Rs. 18) and Rs. 2 on each pencil (Rs. 5 − Rs. 3) as profit. Group B, the manufacturer, also gains because it sells its products in bulk at Rs. 18 and Rs. 3, which are higher than its earlier prices of Rs. 15 and Rs. 2, covering the increased production cost and taxes. In this way, trade benefits both the manufacturer and the wholesaler.

International trade flow of Pakistan

Unit 4, Chapter 3: Entrepreneurship

Exercise: Fill in the blanks:

i. The word entrepreneur originates from _____.

Answer: the French language.

ii. _____ is a course of purposeful action based on informed decisions.

Answer: Entrepreneurship

iii. Some entrepreneurs start their own businesses because they like to build _____.

Answer: organizations.

iv. The jobs created by entrepreneurship in turn lead to equitable distribution of _____.

Answer: income.

v. _____ type of entrepreneur dislike to manage and commit themselves to an organization over the long run.

Answer: Deal makers

Exercise: Answer the following questions:

Question: i. Why risk taking is important to entrepreneurs?

Answer: Risk taking is important because every new business involves danger and uncertainty, and no profit or growth is possible without taking some risk. An entrepreneur makes informed decisions knowing that both good and bad outcomes are possible. Careful risk taking allows the entrepreneur to use new opportunities before others and to make the business successful.

Question: ii. Analyse types of entrepreneurs.

Answer: The chapter describes three types of entrepreneurs. Technical

entrepreneurs love inventing things and creating new markets with advanced technology. Organization builders enjoy building and growing companies by developing people, systems and structures. Deal makers thrive on making initial business deals to start new ventures, but they dislike managing an organization over the long run.

Question: iii. How certain qualities make an entrepreneur successful?

Answer: Qualities such as willpower, management, passion, common sense (smarts), self-assurance, devotion, inspiration and flexibility make an entrepreneur successful. Willpower and devotion keep him working hard without giving up after failures. Good management, wise decisions and flexibility help him plan well and adapt to changing market needs, which leads the business to success.

Question: iv. What an entrepreneur sacrifices in his life to become successful?

Answer: An entrepreneur sacrifices a steady income, fixed working hours and job security, because his earnings are uncertain and irregular in the beginning. He also gives up much of his personal and free time, and may face periods with no income at all. To manage these sacrifices, he should save at least six months of expenses before fully committing to the business.

Question: v. Describe the role of an entrepreneur in wellbeing of a society.

Answer: Entrepreneurs create new markets and drive innovation, which leads to economic growth and technological advancement. They create jobs, reduce unemployment and improve living standards in society. The jobs they create also lead to a fairer distribution of income, and their taxes expand government resources for services, infrastructure and public safety.

Exercise: Extended Activity: Risk vs. Opportunity: Consider the risks involved in the following examples but focus on the opportunities each situation presents. Write the risk involved and one possible opportunity for each event. Explain what you would do to minimize the risk, thereby maximizing the opportunity: 1. You are invited to try out for a school activity that you have always wanted to do such as basketball, football, band, drill team and so forth. You hear that the competition is stiffer than ever this year.

Question: Extended Activity: Risk vs. Opportunity: 2. Your teacher believes that you could win the Intra School Cricket competition. Entering the contest requires staying after school every day for a month to win the competition. Due to your homework, after school is the only time, you have to be with your friends.

Answer: Risk: Staying after school daily for practice means losing free time with friends and may disturb homework. Opportunity: There is a chance to win the Intra School Cricket competition and earn honour for myself and my school. Explanation: I would make a proper timetable for homework, practice and rest, so that the risk is minimized and the opportunity is fully used.

Question: Extended Activity: Risk vs. Opportunity: 3. A new shop keeper offers you candy bars at 20 percent less cost than your current shop keeper for your class fund-raising campaign. Your current shop keeper takes your orders promptly and provides fresh candy bars. You don't know whether or not the new shop keeper is dependable. Your order must arrive within two weeks so that deliveries can be completed before Eid Holidays.

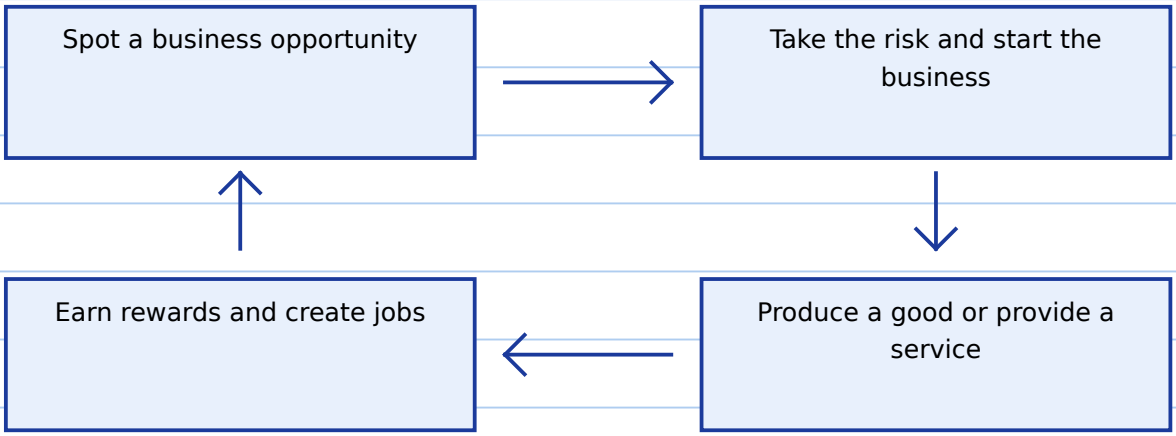

Answer: Risk: The new shop keeper may not be dependable, and the order may be late or of poor quality, which would spoil the fund-raising before the Eid Holidays. Opportunity: Candy bars at 20 percent less cost would

increase the profit of the class fund-raising campaign. Explanation: I would first place a small trial order and check its quality and delivery time, and shift the full order only if the new shop keeper proves dependable.

Question: Extended Activity: Risk vs. Opportunity: 4. You have a terrific idea for a business of your own. You can start the business now but your entire savings of Rs.1,000/- will be required.

Answer: Risk: If the business fails, the entire savings of Rs. 1,000 will be lost. Opportunity: A successful business can multiply the savings and give valuable experience of entrepreneurship. Explanation: I would first make a careful plan, start on a small scale and keep a part of the savings aside, so that the risk is reduced while the opportunity is still used.

The work of an entrepreneur

Unit 5, Chapter 1: Cultural Heritage Conserving Skills

Exercise: Fill in the blanks

i. Moen Jo Daro is located in Larkana district of Sindh province.

ii. Takht-i-Bhai and Bahr-i-Bahlol are located in _____ district of _____ province.

Answer: Mardan, Khyber Pakhtunkhwa

iii. Taxila is located in Rawalpindi district of Punjab province.

iv. Lahore fort (Shahi Qila) and Shalimar Garden are located in _____ district of _____ province.

Answer: Lahore, Punjab

v. Monuments of Makli are located in _____ district of _____ province.

Answer: Thatta, Sindh

vi. Rohtas fort (Rohtas Qila) is located in _____ district of _____ province.

Answer: Jhelum, Punjab

Exercise: Answer the following questions

Question: i. Define what is cultural heritage?

Answer: Cultural heritage is the cultural treasure we inherit from the past, live with in the present, and hand down to the future. It includes monuments, historical places and archaeological sites which hold value in history, science and art. UNESCO defines it as the physical objects and intangible qualities passed down through generations, preserved today

and given to future generations for their benefit.

Question: ii. What is full form of abbreviation UNESCO?

Answer: The full form of UNESCO is United Nations Educational, Scientific and Cultural Organization. It is one of the agencies of the United Nations, which came into being on 4 November, 1946, and its headquarters is in Paris city in France. It works for peace, education, science, culture and the protection of world heritage.

Question: iii. What are moveable cultural heritage assets?

Answer: Moveable cultural heritage assets are the heritage objects that can be moved from one place to another, such as paintings, coins, utensils, sculptures and manuscripts. They are conserved in museums, where they can be protected properly. In Pakistan, looting and stealing of such assets is a serious threat, so they need better security measures.

Question: iv. What are immoveable cultural heritage assets?

Answer: Immoveable cultural heritage assets are the heritage assets that cannot be moved, such as archaeological sites, architectural sites and monuments. They are conserved by keeping them in their original shape and manner, in their own original setting. They often need timely repair due to climatic attacks such as heavy rains, but the repair must not alter their originality at all.

Question: v. Why the need is felt of conservation of cultural heritage assets by every nation of the world?

Answer: Every nation feels the need to conserve its cultural heritage assets because conservation passes these assets on to the next generations. Cultural heritage is an important vehicle for the transmission of experiences, skills and knowledge between generations. If a nation does not take care of its cultural legacy, deterioration slowly takes place and one day the heritage assets disappear completely.

Question: vi. Define relationship of tourism with cultural heritage?

Answer: Cultural heritage and tourism support each other, because tourists visit a country to see its museums, monuments and cultural heritage sites and to learn how previous generations lived. Pakistan has a rich legacy of cultural heritage, and every year Pakistani and foreign historians, scholars, teachers and students prefer to tour these sites. This enthusiasm of tourists generates many opportunities of trade and employment, as tourists buy food and handicrafts and use hotels and transport, so cultural tourism becomes a source of economic growth.

Exercise: Use your inquiry/investigation skills — I. Inquiry Skill

Exercise: Work together and form a group of five to six students. Ask students to search with the help of Internet and collect information regarding six World Cultural Heritage sites in Pakistan. Later, provide information in the table given below: (Names of World Cultural Heritage Site in Pakistan — Located in the Province — Located in the District)

Exercise: Use your inquiry/investigation skills — II. Inquiry Skill

Exercise: Constitution of Islamic Republic of Pakistan provide cover to Cultural Heritage assets in its two articles. Find out from the document of constitution of Pakistan or search from through Internet and provide this information in the table given below: (Article Number — Article's Claim Regarding Preservation of Cultural Heritage)

Unit 5, Chapter 2: The Social Institutions and the Change in Society

Exercise: Fill in the blanks

i. The family is the basic institution of society.

ii. The _____ happens everywhere, but the rate of change varies from place to place.

Answer: change

iii. The invention of mobile phones is a technological advancement.

iv. The increase in the number of deaths, births or migration causes _____ change.

Answer: population

v. The _____ change is caused by an increase in birth and decline in death and migration of populations.

Answer: demographic

Exercise: Answer the following questions

Question: i. List any four technological advancements, which have changed the ways of people.

Answer: Four technological advancements that have changed the ways of people are the mobile phone, the television, electricity and the motor vehicles such as buses, rickshaws and motorcycles. The mobile phone has changed the way we communicate and write, as people now send text

messages instead of letters and postcards. Television, electricity and fast transport have also changed daily life, work and travel in every locality.

Question: ii. List any one local conflict that has created tension in your neighbourhood and explain the effects of the above listed conflict and the ways the conflict ended.

Answer: One common local conflict is a dispute between two neighbouring families over the boundary wall and the drainage of water between their houses, which created tension in the whole street. Because of this conflict, the families stopped speaking to each other, neighbours took sides, and the peace of the neighbourhood was disturbed. The conflict ended when the elders of the area and the local council sat together with both families, listened to both sides, and settled the boundary and drainage according to the record, which both families accepted.

Question: iii. The family is classified in three structures, Patriarchal, Matriarchal and inclusive family. In your opinion which of this family class is better than other. Support your choice with arguments.

Answer: In my opinion, the inclusive family is better than the patriarchal and matriarchal families. In an inclusive family, the male and female members share the economic and household responsibilities, both work in fields, business, industry or workplaces, and both help each other in household chores such as cleaning, washing, cooking and taking care of the children. In this way no single person carries the whole burden, decisions are shared, and every member gets respect and a chance to progress.

Exercise: Conduct an inquiry: Interview the eldest person in your family/neighbourhood and ask her/him about the changes in society caused by the arrival of any technology in your locality (telephone, TV, Buses, Electricity, Solar system or gas). Ask her/him what kind of

positive changes has that specific advancement has brought in the society.

Exercise: Cooperate with others: Work in 5 groups on each of the social institution. Each individual of the group shall write one strength and one weakness of the given social institution on two pieces of the paper. Each group will paste the strength and weaknesses on a chart/soft board or on the black/whiteboard. Each group will present their ideas.

Unit 5, Chapter 3: Development of Cultures in the Societies of the World

Exercise: Fill in the blanks

i. Culture is not only represented through physical objects. Major part of culture lies the way people _____.

Answer: behave.

ii. Dresses and architecture are part of _____ material culture. .

iii. _____ has been selected as first female judge of Supreme Court of Pakistan.

Answer: Ayesha Malik

iv. The "Palla" fish is traditional food of province _____ Sindh. .

v. Modern _____ and _____ have played a vital role in promoting culture and tourism.

Answer: information technology, social media

Exercise: Answer the following questions

Question: i. Describe any three material components of the culture.

Answer: Three material components of culture are dresses, architecture and food, because material culture includes all the physical things that a group of people use, like tools, clothes, buildings and food. In Pakistan, people of Sindh wear Sindhi Topi and Ajrak, in Baluchistan men wear a white turban, and in Punjab people wear colourful turbans and dhoti, while

houses and buildings are built according to the geography and climate of each region. Food is also a material component, and items like Biryani, Pulao, Nihari, Sajji and Tikka are famous all over the world.

Question: ii. Write a note on the rituals performed during a wedding. Also argue on how these rituals impact your identity?

Answer: Rituals are religious or social ceremonies consisting of a series of actions performed in a prescribed manner, and many rituals are performed in weddings in a fixed sequence, exactly as they were performed in earlier weddings. In the culture of Sindh, the bride and bridegroom are seated on a cotton quilt covered with a red sheet and then their heads are bumped to each other, and this ritual is called Laon. These rituals impact our identity because they connect us with our region, family and traditions, and they show others who we are and to which culture we belong.

Question: iii. List any three objects that were found in Indus Valley civilization and can be seen in our society today as well.

Answer: Three objects found in the Indus Valley civilization that can be seen in our society today as well are pottery and utensils, jewellery and ornaments, and tools and wheeled carts. The people of Mohen-Jo-Daro and Harappa used fine pottery, beads and jewellery, seals and tools in their daily life. Similar pots and utensils, jewellery and the wheel are still used in our homes and markets today, which shows the continuity of that ancient culture.

Question: iv. Reflect on the behaviour of individuals according to their gender.

Answer: The actions of individuals that are considered appropriate to their gender, as defined by cultural practices, are called gender roles, and society, media, culture and language start creating these differences from the birth of a child. Families even choose toys and colours of clothes

according to the sex of the newborn, and earlier only a few professions like medical and teaching were considered suitable for women. However, these roles are not definite and rigid, and with time women are now participating in every walk of life, from flying planes to holding the highest ranks in the military and police, which proves that skills and opportunities have no linkage with gender.

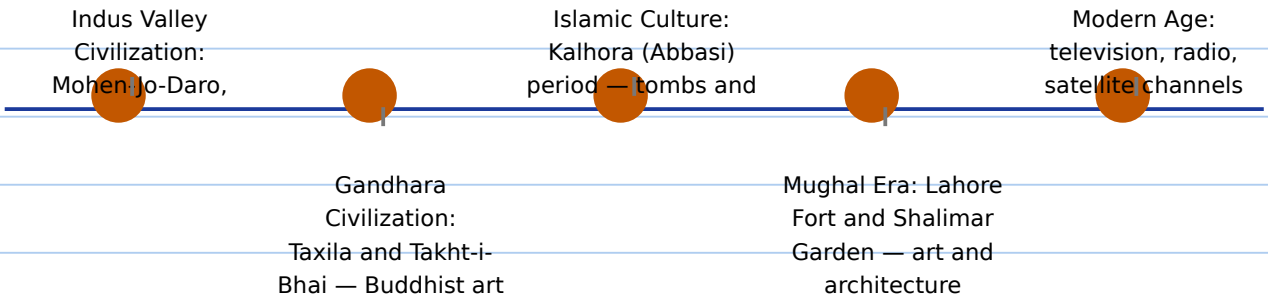

Question: v. Write a paragraph on advantages of cultural diversity in Pakistan.

Answer: Cultural and individual diversity in Pakistan plays a very important role in creativity, innovation, new ideas and the market. It creates advantages for cultural tourism and the economy, because communities get economic opportunities by presenting their cultural artifacts and handicrafts in the market, and it is also better for democratic systems. Pakistan, having diverse topographic and cultural variations along its land, is fortunate to have cultural as well as geographic diversity, and people learn from each other by sharing ideas and traditions.

Exercise: Conduct an inquiry: Make a list of tasks the male and female members of your family perform during a day. Present those in class and identify the similarities and differences of the tasks performed by different individuals in different households.

Exercise: Cooperate with others: Work in 6 groups. Each group shall take a profession and list the required skills for that specific profession. After identifying required skills identify which gender will be able to perform any of the selected professions.

Development of Cultures in the Societies of the World

Unit 5, Chapter 4: Conflict Resolution

Exercise: Fill in the blanks

i. Conflict is based on differences.

ii. Conflict and its constructive management is integral to _____ citizenship.

Answer: democratic

iii. If both parties attempt to win and make other loose, this situation is called _____.

Answer: win-lose (competing).

iv. Asoka the Mauriyan Ruler abolished and ended the slavery.

v. A judge is a fine example of an arbitrator.

Exercise: Answer the following questions

Question: i. Suggest any three ways to manage a conflict.

Answer: Three ways to manage a conflict are communication, negotiation and compromising. Through communication, both parties listen to each other and explain their positions and interests without blaming each other, while in negotiation they work together to find a solution that meets the interests of all. In compromising, both parties give up something and get something, so the problem is settled peacefully without violence.

Question: ii. Give examples on how "Communication" can prevent a conflict?

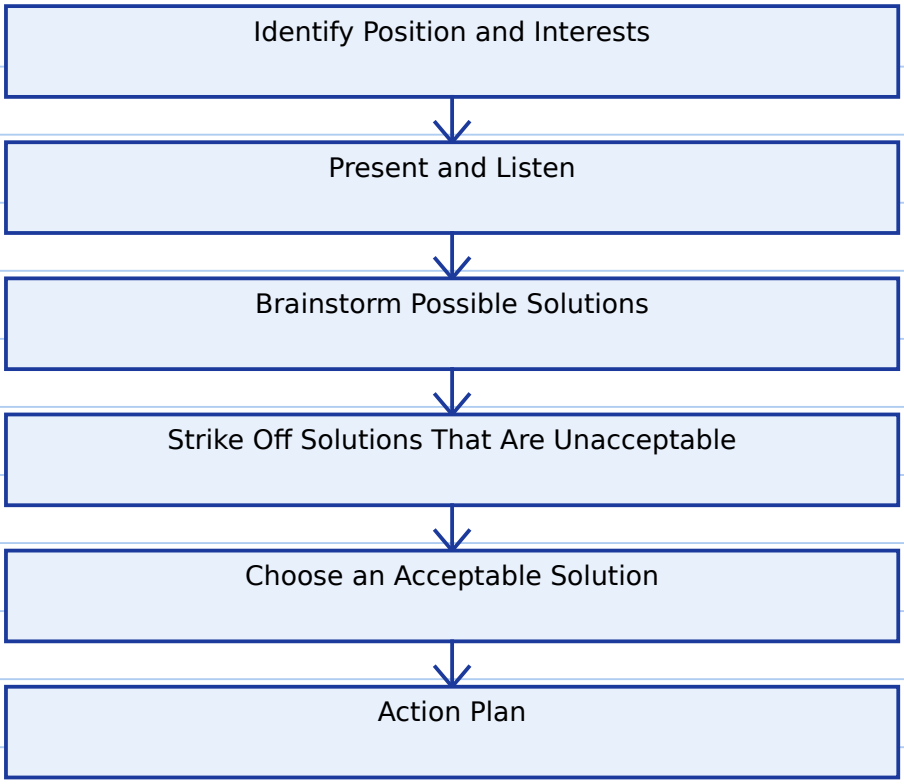

Answer: Communication can prevent a conflict because most conflicts

grow when people do not listen to each other and misunderstand the other person's position and interests. For example, if two students disagree over a seat or a turn in a game, talking calmly and listening to each other can solve the matter before it turns into a fight. In the same way, the chapter tells us that communication is a constructive response to conflict, while violence is a highly destructive response, so clear communication stops small differences from becoming big conflicts.

Question: iii. Describe the steps to be taken for an effective negotiation.

Answer: For an effective negotiation, first each person defines what their position and interests are. Then each person presents what happened and listens to the other without interrupting or blaming, after which both parties brainstorm all possible solutions without judging them. In the end, the solutions that are unacceptable to both parties are struck off, one acceptable solution is chosen that meets the interests of both as much as possible, and an action plan is made to put it in place.

Steps of Effective Negotiation

Exercise: Cooperate with others: Work in 5 groups. Each group shall take an international conflict and devise ways to end the conflict. Come up with creative ideas and suggestions on which type of settlement is better for the issue that you have selected.

Unit 6, Chapter 1: History Skills

Exercise: Exercise 1: Interpretation Skills — Objective: Develop interpretation skills by analyzing a historical image. Instructions: Select a historical image, such as a painting, photograph, or illustration. Study the image carefully and make a list of observations. What do you see? What details stand out? Write a short paragraph (3-5 sentences) interpreting the image. What historical event or period do you think it represents? What emotions or messages might the creator have wanted to convey? Share your interpretation with a classmate and discuss any differences in your perspectives.

Question: Select a historical image and make a list of observations. What do you see? What details stand out?

Answer: I selected an old photograph of the ruins of Mohenjo-Daro. I can see rows of baked-brick houses, straight streets, a large raised structure (the Great Bath) and covered drains along the roads. The details that stand out are the planned streets crossing each other at right angles and the absence of any large palace or temple, which shows an organized city life.

Question: Write a short paragraph (3-5 sentences) interpreting the image. What historical event or period do you think it represents? What emotions or messages might the creator have wanted to convey?

Answer: This image represents the Indus Valley Civilization, about 4,500 years ago, one of the oldest civilizations of the world. It shows that the people of that period were skilled builders who planned their cities with

care for cleanliness, water supply and drainage. The photograph creates a feeling of pride and wonder, because it tells us that advanced city life existed in our land thousands of years ago. The creator seems to convey the message that the past of this region was rich, civilized and worth preserving.

Question: Share your interpretation with a classmate and discuss any differences in your perspectives.

Answer: When I shared my interpretation, my classmate agreed that the city was well planned but thought the large structure was a fort, while I took it to be the Great Bath used for bathing and religious purposes. We discussed both views and concluded that the same evidence can be interpreted in more than one way. This shows why historians must check an interpretation against other sources before accepting it.

Exercise: Exercise 2: Finding Sources of Historical Evidence — Objective: Practice identifying different types of historical sources. Instructions: List five different sources of historical evidence, such as diaries, private papers, personal letters, memoirs, scripts, newspapers, photographs, and artifacts. Choose one source from your list and briefly describe what kind of information it might provide about the past. Share your list and description with a partner, and have them guess the type of source you chose based on your description. Switch roles and guess your partner's chosen source based on their description.

Question: List five different sources of historical evidence.

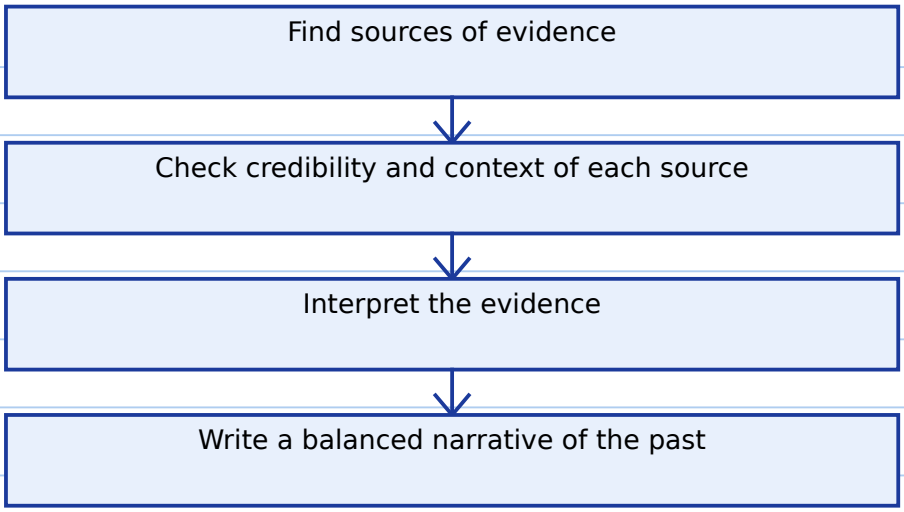

Answer: Five sources of historical evidence are: (1) diaries, (2) personal letters, (3) memoirs, (4) newspapers, and (5) artifacts such as coins, tools and pottery. Diaries, letters and memoirs are primary sources written by

people who lived at that time. Newspapers and artifacts also give direct evidence of the life, events and conditions of the past.

Question: Choose one source from your list and briefly describe what kind of information it might provide about the past.

Answer: I chose personal letters. A personal letter tells us what the writer saw, felt and thought at the time of an event, in his or her own words. It can provide information about daily life, family relations, prices, travel and public events of that period which official records often do not mention.

Steps of Historical Research

Exercise: Exercise 3: Dealing with Archival Material — Objective: Explore the challenges of working with historical documents.

Instructions: Imagine you are a historian working with old documents, handwritten letters. Write a short letter in cursive handwriting (if you can) or print it to simulate a handwritten document. Swap letters with a classmate. Your task is to decipher and transcribe your partner's letter. If necessary, use a magnifying glass or digital tools to help you read the text. Discuss any difficulties you encountered while transcribing and any strategies you used to overcome them. Reflect on the importance of preserving historical

documents for future generations.

Question: Write a short letter to simulate a handwritten historical document.

Answer: Model letter: "My dear brother, I reached Hyderabad safely after three days of travel. The bazaars are full of grain and cloth, but prices have risen since last year. The river is high this season and the farmers are hopeful of a good crop. I shall return home before the end of the month. Your loving sister." Such a letter, written in handwriting, works as a primary source for a historian.

Question: Swap letters with a classmate, decipher and transcribe your partner's letter, and discuss the difficulties you encountered and the strategies you used to overcome them.

Answer: The main difficulties were joined and faded handwriting, old spellings and words written without clear gaps, which made some sentences hard to read. I overcame them by reading the letter slowly, guessing difficult words from the sense of the sentence and using a magnifying glass for faint parts. This is the same careful method historians use while working with real archival material.

Question: Reflect on the importance of preserving historical documents for future generations.

Answer: Historical documents are the direct evidence of our past, and once they are lost, that evidence can never be recovered. Preserving them in archives keeps the record of events, people and daily life safe for students and researchers. Future generations can then learn their true history from original sources instead of depending only on stories and guesswork.

Exercise: Exercise 4: Developing Objectivity Skills — Objective:

Explore the concept of objectivity in history. Instructions: Choose a current event or news story that interests you. It could be a recent local or global news event. Write a brief summary (3-4 sentences) of the event without including your personal opinion or bias. Stick to the facts. Now, write a second summary that includes your perspective and feelings about the event. Compare the two summaries and discuss with a classmate how objectivity differs from subjectivity in reporting news and studying history.

Question: Choose a current event and write a brief summary (3-4 sentences) of the event without including your personal opinion or bias. Stick to the facts.

Answer: Objective summary: Heavy monsoon rains fell in Sindh during the last week. Several low-lying areas of the towns were flooded and some roads remained under water for two days. The district administration set up relief camps in government schools and provided food to the affected families. No summary of loss is final yet, as the survey of damaged houses is still continuing.

Question: Now write a second summary of the same event that includes your perspective and feelings about the event.

Answer: Subjective summary: The heavy rains made me very sad because many poor families in low-lying areas suffered badly and lost their belongings. I feel the drainage system of our town should have been repaired before the monsoon season. In my view, the relief work was good but it started late, and the authorities must plan better in future.

Question: Compare the two summaries and discuss how objectivity differs from subjectivity in reporting news and studying history.

Answer: The first summary only gives facts — what happened, where and what action was taken — without any personal feeling, so it is objective.

The second summary adds my sadness, opinions and judgements, so it is subjective. In history and news reporting, objectivity makes the account reliable and balanced, while subjectivity shows one person's viewpoint and may mislead the reader if it is not separated from facts.

Exercise: Activity: Students should Interpret the event of "the causes of British conquest of Sindh."

Question: Interpret the event of "the causes of British conquest of Sindh."

Answer: The British conquered Sindh in 1843 as part of their policy of expanding control over the Indus region and its trade routes. Sindh had a strategic position: the River Indus was a route for trade and for moving troops towards Afghanistan and Punjab. Disputes over treaties with the Talpur Mirs gave the British an excuse to interfere, and Sir Charles Napier finally defeated the Mirs at the Battle of Miani and annexed Sindh. Thus, trade, strategy and expansion — not a single cause — explain the conquest.

Exercise: Activity: The history teacher should arrange the visit of the students to archival depository and give / assign them the task of finding out the source of topic of separation of Sindh from Bombay presidency.

Question: Find out the source of the topic of separation of Sindh from Bombay presidency.

Answer: Sindh was separated from the Bombay Presidency on 1st April 1936 under the Government of India Act 1935, and it became a separate province with Karachi as its capital. The sources for this topic are found in the archival depository: official government records and gazette notifications of 1935-36, files of the Sindh administration and contemporary newspapers reporting the separation. These primary

sources confirm the date, the legal order and the public reaction of that time.

Exercise: Activity: Make a list of archival sources to study on topics such as: Rise and fall of Sama dynasty. The contribution of Kalhora rule in the development of literature. The role of Talpur in the field of architecture.

Question: Make a list of archival sources to study on the topic "Rise and fall of Sama dynasty".

Answer: For the Sama dynasty (1335-1520), the archival sources include Persian histories and chronicles of Sindh, inscriptions on mosques and tombs of Thatta and Makli, and old coins of the Sama rulers. These sources tell us how the Samas rose to power, ruled Sindh and finally declined before the Arghuns. Studying them together gives a balanced picture of the period.

Question: Make a list of archival sources to study on the topic "The contribution of Kalhora rule in the development of literature".

Answer: For the Kalhora period, the sources include manuscripts of Sindhi and Persian poetry, letters and writings of scholars patronized by the Kalhora court, and records preserved in libraries and archives. The Kalhoras promoted Sindhi language and literature, and Shah Abdul Latif Bhittai also belongs to this age. These manuscripts and printed collections are the main evidence of that literary development.

Question: Make a list of archival sources to study on the topic "The role of Talpur in the field of architecture".

Answer: For Talpur architecture, the sources include the buildings themselves — the Talpur palaces and the tombs of the Talpur Mirs in Hyderabad — their inscriptions, old photographs and official survey

records kept in archives. These sources show the designs, materials and decoration used by the Talpurs. They prove that the Talpurs developed a distinct style combining local and Mughal features.

Exercise: Activity: Write a report on the event happened recently in your area.

Question: Write a report on the event happened recently in your area.

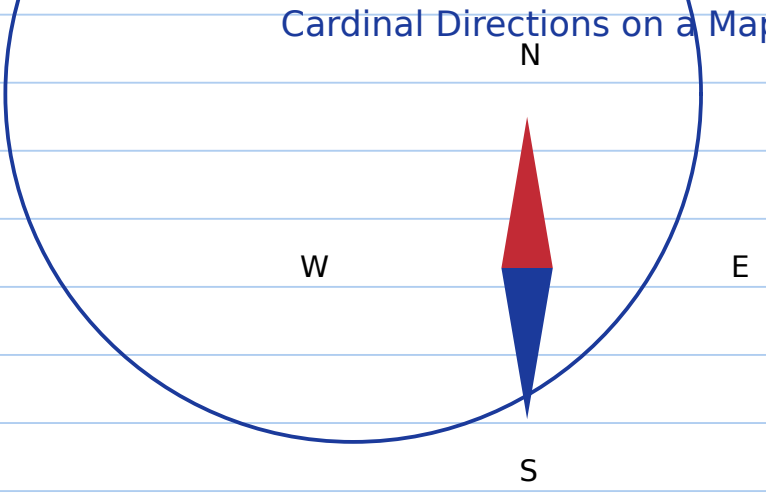

Answer: Model report: A tree-plantation drive was held in our area last week, organized by the local school and the town committee. Students, teachers and residents planted more than two hundred saplings along the main road and in the public park. The headmaster said in his short speech that trees keep the air clean and protect the town from heat. The event ended with a resolve that every participant would look after at least one planted tree.

Unit 6, Chapter 2: Geographic Skills

Exercise: Activity: Explore satellite imagery of your city/town with the help of internet service and notice which changes have been occurred between past and in the present times at that place. Record in first column of table past features of that place and in second column of the table records most visible changes occurred at that place in the present times.

Question: Explore satellite imagery of your city/town and record the past features of that place and the most visible changes occurred at that place in the present times.

Answer: In the past satellite image, our town appears small, surrounded by green agricultural fields, with few roads and large open spaces. In the present image, the town has spread outwards: new housing colonies have replaced many fields, roads have widened and markets and buildings have increased. This comparison shows clearly how population growth and construction have changed the place with the passage of time.

Exercise: END OF CHAPTER EXERCISE — FILL IN THE BLANKS

1. Satellite imagery is used to takes photographs of the _____ from the space.

Answer: earth

2. Three categories of satellite imagery are Visible Imagery, Infrared Imagery and _____ Imagery.

Answer: Water Vapour

3. Satellite imagery is used by meteorologists to forecast the behaviours of _____.

Answer: atmosphere.

Question: 4. It is used by Agrologists to see crop yield and crop patterns.

Answer: It is used by Agrologists to see crop yield and crop patterns. This statement is already complete in the book: agrologists use satellite imagery to judge the condition and production of crops over large areas.

Question: 5. It is used by the Foresters for identification of vegetation density and conservation of wildlife.

Answer: It is used by the Foresters for identification of vegetation density and conservation of wildlife. This statement is already complete in the book: foresters use satellite imagery to find how dense the vegetation is and to protect wildlife in forest areas.

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: 1. Why Geographers use satellite imagery?

Answer: Geographers use satellite imagery for mapping the use of land. With its help they can see towns, villages, roads, forests and cultivated areas from above and prepare accurate maps. It also helps them study changes in land use over time.

Question: 2. Why Oceanographers use satellite imagery?

Answer: Oceanographers use satellite imagery to assess the condition of the sea. The images show sea temperature, currents and the movement of fish, so they are also helpful for fishing. This information is useful for ships, fishermen and weather experts.

Question: 3. Which is the basic element of satellite imagery?

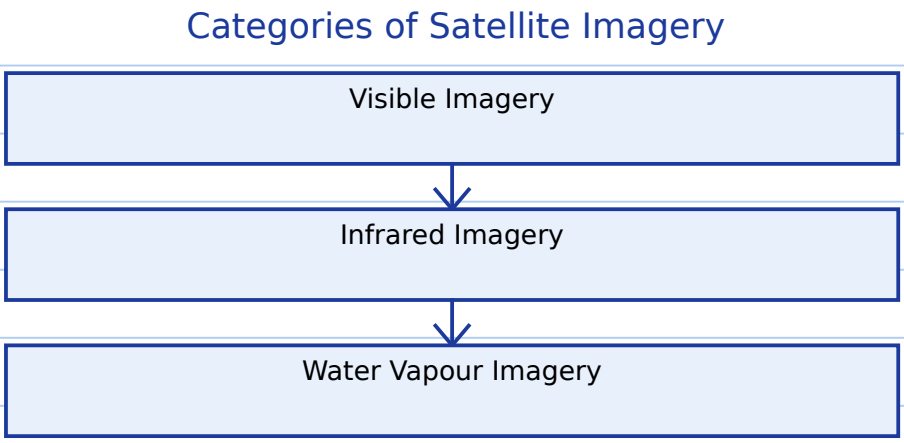

Answer: The basic element of satellite imagery is a pixel. Satellite images are produced in digital form through line scanners and digital cameras, and the whole image is arranged in a row and column structure of pixels. Each pixel carries the information of a small part of the earth.

Question: 4. Write down the names of three categories of satellite imagery?

Answer: The three categories of satellite imagery are: (1) Visible Imagery, which can be viewed only during the day time when clouds reflect the light of the sun, (2) Infrared Imagery, which can be viewed at any point of the day and measures the heat radiating from the sun, and (3) Water Vapour Imagery, which measures the amount of water vapour present in the atmosphere.

Question: 5. Why satellite imagery is used by media companies?

Answer: Media companies use satellite imagery to show the public and government how a natural disaster may have affected a country or region. Images of floods, earthquakes or storms make the report clear and believable. They also help the government and relief agencies decide where help is needed most.

Exercise: USE YOUR INQUIRY/INVESTIGATION SKILLS: Explore and find out after a little search (using internet as a tool of research) how satellite imagery can be used. Specially by the people, governments and businessmen. Supply answers to the relevant space in the table provided below. (Specific use of satellite imagery by: People, Government, Businessmen and Firms — How they can use satellite imagery and get benefit from it)

Question: How can People use satellite imagery and get benefit from it?

Answer: Common people use satellite imagery through map applications on the internet, such as Google Earth, to see their own town or city and notice changes in it. They also benefit from weather forecasts based on satellite images, which warn them about rains, storms and floods in advance. It helps travellers find locations and routes easily.

Question: How can Government use satellite imagery and get benefit from it?

Answer: Governments use satellite imagery for town planning, mapping land use, monitoring borders and managing natural disasters. It helps them watch forests, crops, rivers and the movement of the earth. On this basis the government can make better policies for agriculture, water supply, roads and relief work.

Question: How can Businessmen and Firms use satellite imagery and get benefit from it?

Answer: Businessmen and firms use satellite imagery to select suitable sites for shops, factories, housing schemes and farms. Agricultural firms judge crop condition and expected yield from the images, and media and transport companies use them for reporting and route planning. This reduces guesswork and helps them invest money at the right place.

Exercise: COOPERATING WITH OTHERS — Work together in a group of four students in the classroom, initiate discussion in the group by referring content provided in the above table in the chapter and construct a narrative regarding the function of map and satellite imagery whether their functions are the same or different. State your group's narrative in the space provided below. (Group's Narrative)

Question: Construct a group narrative regarding the function of map and satellite imagery — whether their functions are the same or different.

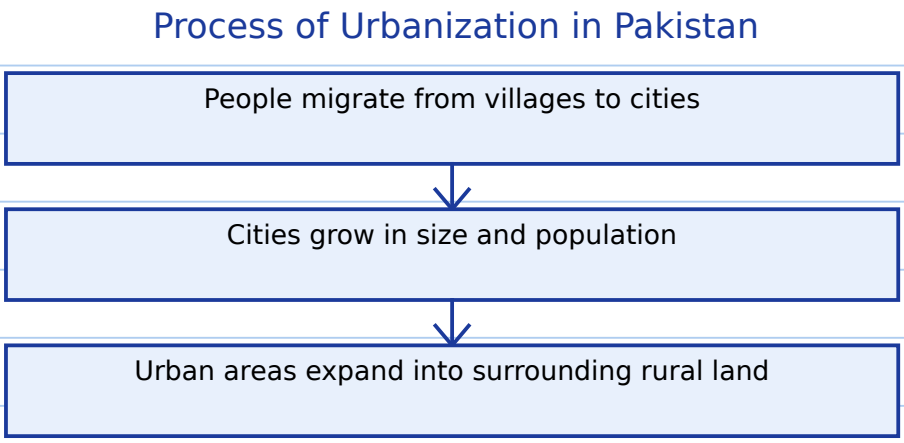

Answer: Group's Narrative: Maps and satellite imagery both show the earth and its features, but their functions are not fully the same. A map gives recorded information such as international and provincial boundaries, capitals, districts, rivers, lakes and mountain peaks in symbols. Satellite imagery gives a real and recent view from space: it shows colours of clouds, ground and water, measures heat and water vapour, and forecasts the behaviour of the atmosphere. So a map tells us where things are, while satellite imagery tells us what is happening there at present; together they give complete geographical information.

Unit 6, Chapter 3: Mapping Skills for Study of Urbanization in Pakistan

Exercise: Activity: (An individual Task) Put an effort to create a map (map of Pakistan) to show densely and sparsely populated places of Pakistan.

Question: Create a map of Pakistan to show densely and sparsely populated places of Pakistan. Describe what your map shows.

Answer: On my map of Pakistan, the densely populated places are shaded dark: these are the big cities and their surrounding districts, such as Karachi, Hyderabad, Lahore, Faisalabad, Rawalpindi-Islamabad, Multan, Gujranwala and Peshawar, mostly in Sindh and Punjab along the rivers and roads. The sparsely populated places are shaded light: most of Baluchistan, the Thar desert, the northern mountain areas and the dry western districts. The map shows that population in Pakistan is concentrated in cities and fertile plains, while deserts and mountains have very few people.

Exercise: Activity: Form a group of four to five students. Explore numerous maps on patterns of urbanization and identify patterns of urbanization in them. Select 2 to 3 maps on patterns of urbanization. Communicate statistics of these maps on patterns of urbanization in your group and try to draw conclusion from the statistical evidences available in these maps. Interpret by showing maps all the agreed upon information extracted from these maps while group discussion to the entire class and conclude discussion in the form of group presentation.

Question: Explore maps on patterns of urbanization, communicate the statistics of the selected maps in your group and draw a conclusion from the statistical evidence.

Answer: Our group selected maps showing the urban population of Pakistan in 1998 and 2017 and the province-wise urban percentages. The statistics show that urban population rose from 43 million in 1998 to 76 million in 2017, and urbanization increased in all four provinces, most in Sindh (48.75% to 52.02%) and least in Khyber Pakhtunkhwa (16.87% to 18.77%). Our agreed conclusion is that urbanization in Pakistan is increasing rapidly and continuously, and cities are growing faster than the facilities of housing, water, health and education available in them.

Exercise: END OF CHAPTER EXERCISE — FILL IN THE BLANKS

i. Around _____ people live in Urban areas of Pakistan according to the statistics of census of 2017.

Answer: 76 million

ii. According to the census statistics of 1998, the definition of an urban center is; a place with _____ or more people was to be categorized as an urban center.

Answer: 5,000

iii. Patterns of urbanization are categorized in terms of its demographic aspects, economic aspects and _____ aspects.

Answer: social

iv. Archaeologists and Historians consider the roots of early growth of cities and development of urban centers in South Asia around _____ years back.

Answer: 5500

v. The rural population is expected to be equal to the urban population by the year _____.

Answer: 2030.

Exercise: ANSWER THE FOLLOWING QUESTIONS

Question: i. What is urbanization?

Answer: Urbanization is the movement of people from villages to cities, where economic activities are centered around non-agricultural occupations such as trade, manufacturing industry and management. As more and more people settle in cities, the cities grow in size and population. In Pakistan this process has been continuing rapidly since independence.

Question: ii. What are the reasons of urbanization in Pakistan? State three

main reasons.

Answer: Three main reasons of urbanization in Pakistan are: (1) after independence, refugees settled in cities and urbanization began; (2) industrialization made people shift to cities in search of better jobs and wage rates; and (3) cities offer better educational and health facilities, while the poor standard of living in rural areas pushes people to migrate to big cities to get the basic necessities of life. Mergers of adjoining towns into big cities have also enlarged the urban centers.

Question: iii. What is trade?

Answer: Trade is the buying and selling of goods and services between people, regions or countries. It begins when an area produces more of some goods than it needs and exchanges the surplus for goods it lacks. Trade is one of the main economic activities around which cities and urban centers grow.

Question: iv. What are the types of trade? State its sub-types also.

Answer: Trade has two main types: internal (domestic) trade, which takes place within a country, and external (international) trade, which takes place between different countries. Internal trade is divided into wholesale trade and retail trade. External trade is divided into import trade, export trade and entrepot (re-export) trade.

Exercise: MATCH THE COLUMN — The table shows an increase in urbanization taken place from 1998 till 2017 in Pakistan as a whole and in all four provinces. Column A: 1. Khyber Pakhtunkhwa, 2. Baluchistan, 3. Sindh, 4. Punjab, 5. Pakistan. Column B: From 43 million to 76 million; 48.75% to 52.02%; 31.27% to 36.71%; 23.89% to 27.55%; 16.87% to 18.77%. Match Column A with Column B.

Question: 1. Khyber Pakhtunkhwa

Answer: 16.87% to 18.77%

Question: 2. Baluchistan

Answer: 23.89% to 27.55%

Question: 3. Sindh

Answer: 48.75% to 52.02%

Question: 4. Punjab

Answer: 31.27% to 36.71%

Question: 5. Pakistan

Answer: From 43 million to 76 million
