Social Studies

Class 5 (English Medium)

Solved Exercises — Sindh Textbook Board

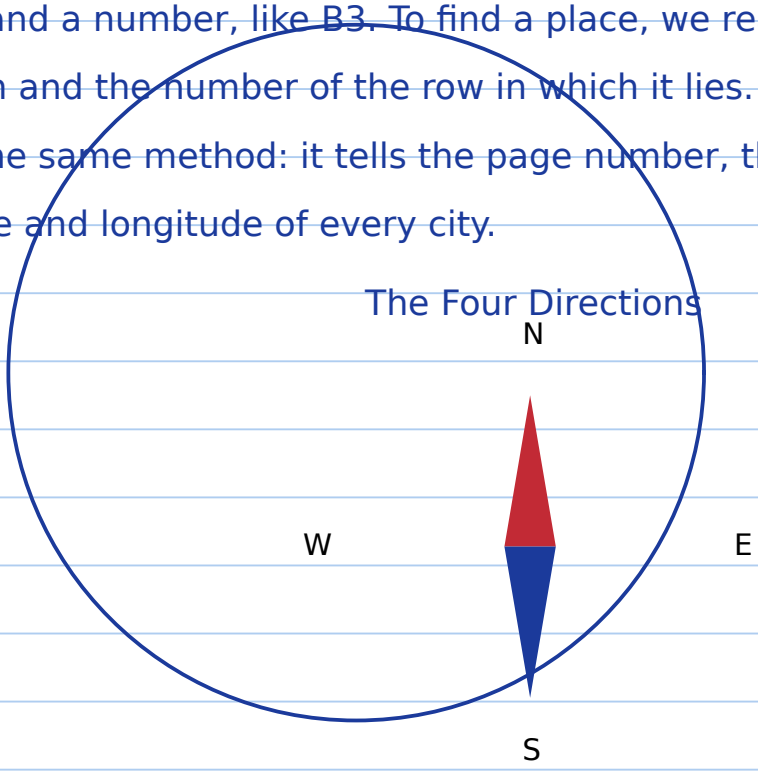

13 lessons — 345 questions

Globe and Map Skills

Activities (given in the chapter)

Question: Activity: Draw a grid of squares over a map and use it to find the location of different places.

Answer: When a grid of squares is drawn on a map, every square gets a letter and a number, like B3. To find a place, we read the letter of the column and the number of the row in which it lies. The index of an atlas uses the same method: it tells the page number, the grid square and the latitude and longitude of every city.

Question: Activity: Find the location of Peshawar and Hyderabad with the help of their latitude and longitude.

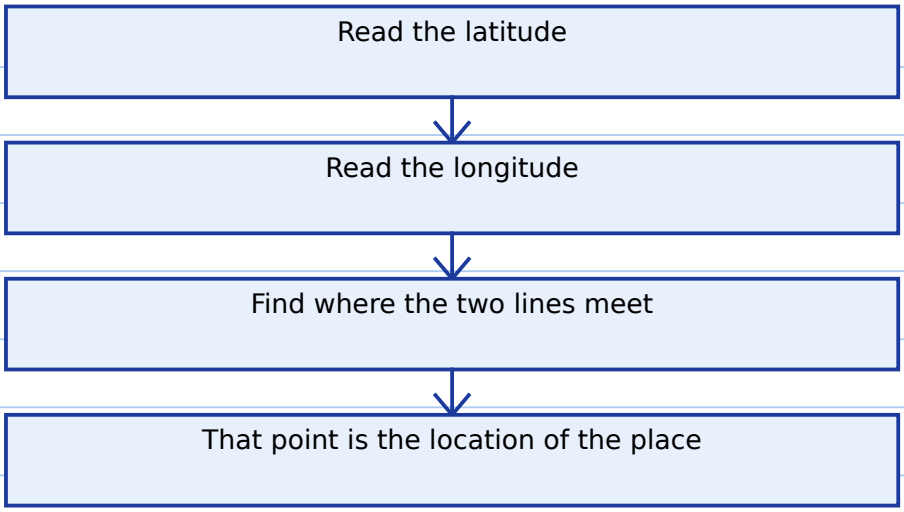

Answer: Peshawar is located at about 34.01°N latitude and 71.58°E longitude, in the north-west of Pakistan. Hyderabad is located at about 25.38°N latitude and 68.37°E longitude, in the province of Sindh. To find a place, we first move along its latitude line and then along its longitude line; the point where the two lines meet is the location of the place.

Question: Activity: Which cities are located at these latitudes and

longitudes? (a) 31.25°N, 73.9°E (b) 25.22°N, 68.22°E

Answer: (a) The city at 31.25°N latitude and 73.9°E longitude is Faisalabad, an important industrial city of Punjab. (b) The city at about 25.22°N latitude and 68.22°E longitude is Hyderabad in Sindh. Reading the latitude first and the longitude second helps us reach the correct city on the map.

Finding the Location of a Place

Question: Activity: Measure the distance between Karachi and Islamabad on the map (Figure 1.9) with the help of the scale of the map.

Answer: Measure the straight distance between Karachi and Islamabad on the map with a ruler and multiply it by the scale of the map (for example, if 1 cm = 100 km, multiply the centimetres by 100). The straight-line distance between Karachi and Islamabad is about 1,150 km, while the road distance is about 1,400 km.

Question: Activity: Measure the length of the River Indus on a map using a piece of thread.

Answer: Lay the thread carefully along all the bends of the River Indus on the map, then straighten the thread, measure its length with a ruler and multiply by the scale of the map. Measured this way, the River Indus is

about 2,700 km long.

Exercise A: Multiple Choice Questions — tick the correct answer

The lines drawn on a globe from the North Pole to the South Pole are called:

- (a) Latitudes
- ✓ (b) Longitudes
- (c) The Equator
- (d) Time zones

The line of latitude at 23.5°S is called:

- (a) Tropic of Cancer
- (b) Arctic Circle
- ✓ (c) Tropic of Capricorn
- (d) The Equator

How many time zones are there in the world?

- (a) 12
- (b) 20
- ✓ (c) 24
- (d) 36

The maps which show the boundaries of countries, provinces and districts are called:

- (a) Physical maps
- ✓ (b) Political maps
- (c) Relief maps
- (d) Weather maps

The maps which show natural features such as mountains, rivers, plains and deserts are called:

- ✓ (a) Physical maps
- (b) Political maps

(c) Relief maps

(d) Road maps

Exercise B: Answer the following questions

Question: How many lines of latitude and longitude are there?

Answer: There are 180 lines of latitude in all: 90 in the Northern Hemisphere and 90 in the Southern Hemisphere. The lines of longitude are 360 in all: 180 towards the east and 180 towards the west, starting from the Prime Meridian (0°). Latitudes are measured from the Equator and longitudes from the Prime Meridian.

Question: Name the main lines of latitude and longitude.

Answer: The main lines of latitude are: the Equator (0°), the Tropic of Cancer (23.5°N), the Tropic of Capricorn (23.5°S), the Arctic Circle (66.5°N), the Antarctic Circle (66.5°S) and the Poles (90°). The main lines of longitude are the Prime Meridian (0°), which passes through Greenwich in England, and the International Date Line (180°).

Question: Name and describe the types of map scales.

Answer: There are three types of map scale. (1) Statement scale: the scale is written in words, for example "1 cm on the map = 10 km on the ground". (2) Line or bar scale: a line divided into parts, each part showing a ground distance. (3) Ratio or fractional scale: the scale is written as a ratio or fraction, for example 1:100, which means 1 unit on the map is equal to 100 units on the ground.

Question: Give three reasons why the location of Pakistan is important.

Answer: (1) Pakistan lies between about 25°N and 37°N latitudes, so it has all four seasons and a great variety of crops and livestock can be raised here. (2) It is situated in South Asia; it is a member of SAARC, has friendly relations with industrial China in the north and many Muslim countries are

its neighbours. (3) The Arabian Sea lies to its south, so Pakistan can carry on international trade by sea through its ports.

Exercise C: Complete the table

Question: Complete the table: On the world map (Figure 1.2), find the latitude and longitude of the capital cities given below and write the letter of each city shown on the map. 1. Beijing (China) 2. Washington (USA) 3. Moscow (Russia) 4. Tokyo (Japan) 5. London (United Kingdom) 6. Canberra (Australia)

Answer: 1. Beijing — 39°N, 116°E — D; 2. Washington — about 39°N, 77°W — A; 3. Moscow — about 55°N, 37°E — F; 4. Tokyo — about 35°N, 139°E — B; 5. London — about 51°N, 0° — E; 6. Canberra — about 35°S, 149°E — C. (Beijing is already marked in the book as an example.)

Exercise D: Practical work

Question: Practical work: Measure the distance between Karachi and Sukkur on a map of Sindh using its scale.

Answer: Measure the distance between Karachi and Sukkur on the map with a ruler and multiply it by the scale written on the map. The straight-line distance comes to about 480 km, while the road distance is longer, about 560 km.

Question: Practical work: Measure the length of the River Indus on a map using a thread.

Answer: Lay the thread along all the bends of the River Indus from its start to the sea, then straighten it, measure it and multiply by the scale. According to the book, the total length of the River Indus is about 2,700 km; it rises in Tibet and falls into the Arabian Sea in Sindh.

Question: Practical work: Take a plastic ball. Draw the Equator and other lines of latitude on it.

Answer: Draw a line around the middle of the ball; this is the Equator (0°). Then draw lines parallel to it above and below, for example at 23.5° and 66.5°, and the points of the Poles at 90°. The lines above the Equator show northern latitudes and the lines below it show southern latitudes. This activity shows that lines of latitude are circles parallel to the Equator.

Question: Practical work: Measure your classroom, draw its map and write its scale in a statement.

Answer: Measure the length and width of the classroom with a measuring tape, for example 8 metres by 6 metres. Draw a rectangle on paper in the same proportion, for example 8 cm by 6 cm, and mark the door, windows, blackboard and desks. The statement scale of this map is: 1 cm on the map = 1 metre in the classroom. (Every student should write the scale of his or her own classroom map in the same way.)

Exercise E: Extension activity

Question: Extension activity: Use the index of an atlas to find the page number, grid square, latitude and longitude of any three cities of Pakistan.

Answer: In the index of an atlas, cities are listed in alphabetical order with their page number, grid square and latitude/longitude. Example from the book: Multan — page 36, grid B3, 30.10°N, 71.36°E. In the same way: Karachi — 24.52°N, 67.03°E; Lahore — 31.55°N, 74.34°E; Islamabad — 33.42°N, 73.09°E. (Page numbers may differ in different atlases.)

The Physical Regions of Pakistan and the World

Activities (given in the chapter)

Question: Activity: Define the term "region" and give one example each of a physical region and a cultural region.

Answer: A region is an area of land which has one or more features in common. A physical region has a common physical feature, for example the Mountainous Region of Pakistan. A cultural region has a common cultural feature, such as language; for example, East Africa is an English-speaking region and West Africa is a French-speaking region.

Question: Activity: Name the mountainous regions of the world and the countries in which they are located.

Answer: The famous mountainous regions of the world are: the Himalayas (Asia — Pakistan, India, Nepal), the Karakoram (Pakistan), the Hindukush (Pakistan, Afghanistan), the Rockies (North America — USA, Canada), the Andes (South America — Chile, Peru, etc.), the Alps (Europe — Switzerland, France, etc.) and the Atlas (Africa — Morocco, Algeria). These regions greatly affect the climate, rivers and life of the people of their countries.

Question: Activity: Write three distinctive features of mountainous regions.

Answer: Three distinctive features of mountainous regions are: (1) They are very high and their high peaks remain covered with snow all the year round. (2) Their climate is cold and they are thinly populated. (3) The people there are mostly busy in lumbering, herding, mining and serving tourists, and in winter they migrate to the lower lands.

Question: Activity: Name three plateaus in other parts of the world.

Answer: Three famous plateaus of the world are: (1) the Tibetan Plateau (Asia), which is the highest plateau in the world; (2) the Deccan Plateau (India); and (3) the Colorado Plateau (USA). In Pakistan there are the Potwar Plateau and the Balochistan Plateau.

Question: Activity: Write the distinctive features of plateaus.

Answer: Plateaus are high lands with a flat top. They usually receive little rainfall, their land is rocky and little water is available for agriculture, so they are thinly populated. Coal, gas, oil and other minerals are found in these regions.

Question: Activity: Name five plains of the world.

Answer: Five great plains of the world are: (1) the Great Plains of the USA, (2) the Siberian Plain (Russia), (3) the Ganges Plain (India), (4) the Nile Plain (Egypt), and (5) the Amazon Plain (South America). These plains are formed by the soil brought by rivers and are very fertile.

Question: Activity: Give three similarities between the plains of Pakistan and the plains of other parts of the world.

Answer: Three similarities are: (1) All these plains are formed by the soil brought by rivers and are fertile. (2) In all of them, crops like wheat, cotton, rice and sugarcane are grown and most people do farming. (3) All these plains are thickly populated and have big cities and industries.

Question: Activity: Name five major seaports of the world.

Answer: Five major seaports of the world are: (1) Shanghai (China), (2) Singapore, (3) Rotterdam (Holland), (4) Karachi (Pakistan), and (5) New York (USA). Through these ports, trade is carried on between countries on a large scale.

Question: Activity: Write the distinctive features of the Coastal Region of Pakistan.

Answer: The Coastal Region of Pakistan is about 1,050 km long, from

Balochistan to Sijawal in Sindh. It has a natural harbour at Karachi and the ports of Bin Qasim and Gwadar, through which trade is done. The people here are mostly engaged in fishing, boat-making and trade, and a part of the fish is exported to other countries.

Question: Activity: Name two hot deserts and two cold deserts of the world.

Answer: Hot deserts: (1) the Sahara (Africa) — the largest hot desert of the world; (2) the Thar (Pakistan and India). Cold deserts: (1) Antarctica — the whole continent is covered with ice; (2) the Gobi (China and Mongolia). Hot deserts are extremely hot in the day, while cold deserts remain extremely cold all the year round.

Question: Activity: Compare hot deserts with cold deserts.

Answer: In hot deserts the temperature is very high in the day, there is sand and rainfall is very low; people rear animals and the camel is used for travelling. In cold deserts the temperature stays below freezing point, the land is covered with snow and there is almost no population. The similarity between the two is that both have very little water and very few people.

Question: Activity: Define the term "interdependence".

Answer: Interdependence means the reliance of the people of one area on the people of other areas for food, goods, resources, technology and knowledge. It benefits both sides, because everyone gets the things which he does not have.

Question: Activity: Give three ways in which people are interdependent.

Answer: (1) For food: wheat, rice and maize go from Punjab and Sindh to the whole country. (2) For minerals: coal, gas and other minerals go from Khyber Pakhtunkhwa and Balochistan to the other provinces. (3) For forest products: wood and other products from the thick forests of Gilgit-Baltistan are used all over the country.

Exercise A: Multiple Choice Questions — tick the correct answer

How many physical regions are there in Pakistan?

(a) 3

(b) 4

✓ (c) 5

(d) 6

How many main kinds of regions are there?

(a) 1

✓ (b) 2

(c) 3

(d) 4

In which continent are the Atlas Mountains located?

✓ (a) Africa

(b) Asia

(c) Europe

(d) South America

Which animal is most used for travelling in the desert and is called the "ship of the desert"?

✓ (a) Camels

(b) Horses

(c) Donkeys

(d) Oxen

On the basis of which common feature is a cultural region made?

✓ (a) Language

(b) Mountains

(c) Rivers

(d) Climate

Exercise B: Answer the following questions

Question: Define the term "region" and name the main physical regions of Pakistan.

Answer: A region is an area of land which has one or more features in common. The main physical regions of Pakistan are five: (1) the Mountainous Region — the mountains of the north and north-west; (2) the Plateaus — Potwar and Balochistan; (3) the Indus Plains — the Upper, Lower and Deltaic Plains; (4) the Coastal Region — along the Arabian Sea; and (5) the Desert Region — Thar, Thal and Chaghi-Kharan.

Question: Define "interdependence" and describe with examples how the people of Pakistan are interdependent.

Answer: Interdependence means the reliance of the people of one area on the people of other areas for food, goods and resources. In Pakistan, Punjab and Sindh are good for agriculture, so wheat, rice and maize go from there to the whole country. Khyber Pakhtunkhwa and Balochistan are rich in minerals, and their mineral products come to Punjab and Sindh. The thick forests of Gilgit-Baltistan give wood which is used all over the country. In this way every region meets the needs of the others.

Question: Explain with examples how the countries of the world depend upon each other.

Answer: The countries of the world depend upon each other through exports and imports. The goods a country sells to other countries are its exports, and the goods it buys are its imports. Pakistan exports rice, cotton and cotton textiles, leather and sports goods. With the money earned from them, it imports heavy machinery, tools, trucks and other necessary things. In this way every country gets from other countries the things it cannot make itself.

Exercise C: Complete the table

Question: Make a table like the one in the book: compare the physical features, life in Pakistan and life in a similar region in one other country for the Mountainous, Plateaus, Plains, Coastal and Desert regions.

Answer: 1. Mountainous Region — Physical features: high snow-covered mountains, cold climate. Life in Pakistan: thinly populated; lumbering, herding, mining and tourist services; simple houses; seasonal migration in winter. Life in another country (the Alps, Europe): industries, banking and dairy farming; good houses; no seasonal migration. 2. Plateaus — Features: high flat land, little rainfall. Life in Pakistan: little agriculture, Karez irrigation, cattle rearing; minerals are found. Life in another country (Tibet): cattle rearing and a simple life. 3. Plains — Features: fertile river soil, plenty of water. Life in Pakistan: agriculture, industries and services; thickly populated; migration from villages to cities. Life in another country (USA): farming by machines, few farm workers, developed technology. 4. Coastal Region — Features: sea coast, harbours. Life in Pakistan: fishing, boat-making and trade; Karachi is the biggest city. Life in another country (Malaysia, Indonesia): industry and tourism are well developed and people are prosperous. 5. Desert Region — Features: sand dunes, very little rainfall, extreme heat. Life in Pakistan: thinly populated, herding is the main occupation, camels are used for transport. Life in another country (the Arabian Desert): people are wealthy due to rich oil reserves, with developed roads and vehicles.

Exercise D: Practical work

Question: Practical work: Draw an outline map of Pakistan, colour and identify its physical regions.

Answer: On the outline map of Pakistan, show the five physical regions in

different colours: the Mountainous Region in the north (Himalayas, Karakoram, Hindukush), the Plateaus in the west (Potwar and Balochistan), the Indus Plains in the centre and east, the Coastal Region in the south and the Deserts (Thar, Thal, Chaghi-Kharan) in the south-east and west. Write the name of each region against its colour so that the map can be read clearly.

Question: Practical work: Tourist Guide Book project: Choose a country, gather information about it and prepare an attractive guide book with pictures.

Answer: Choose a country of your choice, for example Turkiye. Gather information from newspapers, magazines, the internet and family members about its famous places, climate, foods, dress and how to reach there. Then prepare an attractive guide book with pictures, telling what a tourist can see there. Place the book in the school library and share it with your friends.

Exercise E: Extension activity

Question: Extension activity: Hold a class quiz on the information collected in the Tourist Guide Books.

Answer: Every student prepares five questions about his or her chosen country, for example: What is the capital of that country? Which language is spoken there? What is its famous food? Then make teams in the class and ask questions from each other. The team giving the most correct answers wins. In this way everyone learns new information about many countries.

Climate

Activities (given in the chapter)

Question: Activity: From the data of 30 years for the month of December for Appletown (Figure 3.1), calculate the average temperature and the average rainfall. (The total of the temperature is 701.5 and the total of the rainfall is 126.5.)

Answer: Average temperature = 701.5 ÷ 30 = 23.38, that is about 23.4°C. Average rainfall = 126.5 ÷ 30 = 4.22, that is about 4.2 mm. In this way, to know the climate of a place, the weather records of many years are collected and their average is taken.

Question: Activity: Draw a bar graph of the rainfall of Appletown on the basis of the average calculated above.

Answer: On graph paper, show the months (or years) on one side and the rainfall in millimetres on the other side. Draw a bar for each value up to its height, and show the average rainfall line of 4.2 mm in a different colour. Looking at the graph, you can tell in which years the rainfall was above the average and in which years it was below it.

Question: Activity: From Figures 3.6 and 3.7, make a table of the temperatures of Pakistan in the months of January and June.

Answer: January: in the coastal and southern areas the temperature is above 18°C; in the plains it is 10°C to 18°C; in the northern and western mountainous areas it is below 10°C. June: Sindh and South Punjab are the hottest, above 36°C; the plains are 32°C to 36°C; the northern mountains are below 32°C. This shows that the north is cold in winter and the south is very hot in summer.

Exercise A: Multiple Choice Questions — tick the correct answer

Which region lies between the latitudes 5°N and 5°S?

✓ (a) Equatorial Region

(b) Tropical Region

(c) Polar Region

(d) Temperate Region

Question: What is the region called which lies between the latitudes 23.5° to 66.5° North and 23.5° to 66.5° South? a. Equatorial Region b. Polar Region c. Tropical Region

Answer: Temperate Region. Note: the region between 23.5° and 66.5° is the Temperate Region, which is neither very hot nor very cold and has four seasons, but this correct answer is not included in the options printed in the book.

Which city has a moderate climate because it is near the sea?

(a) Jacobabad

(b) Lahore

✓ (c) Karachi

(d) Multan

Which is the main greenhouse gas?

✓ (a) Carbon dioxide

(b) Oxygen

(c) Nitrogen

(d) Hydrogen

What is the average weather of a place over 30 years called?

✓ (a) Climate

(b) Weather

(c) Season

(d) Temperature

Exercise B: Answer the following questions

Question: Define weather and climate.

Answer: Weather is the condition of the atmosphere at a particular time, which includes temperature, humidity, pressure, winds and precipitation; for example, it rained today or it is very hot today. Climate is the average weather of a place over a long period (30 years). Meteorologists collect the records of many years to find out the climate.

Question: Differentiate between weather and climate.

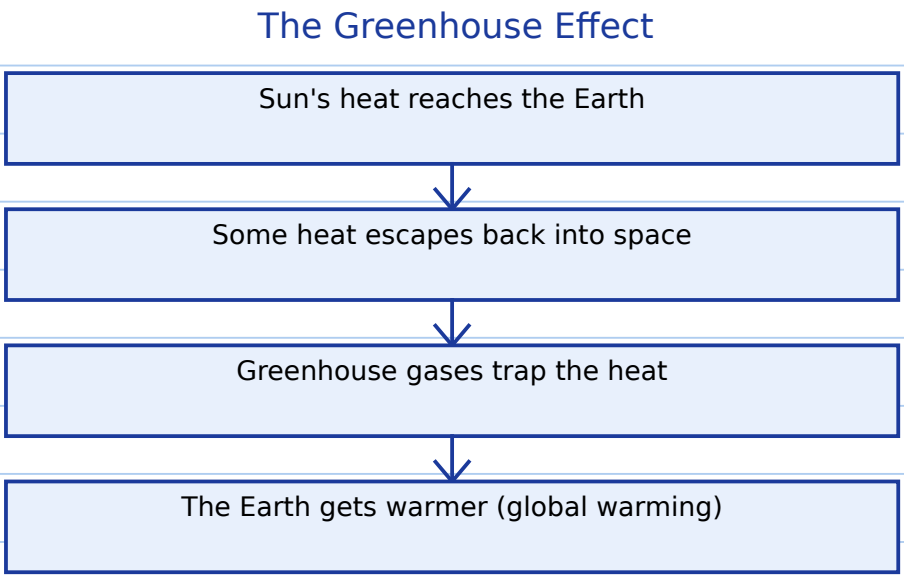

Answer: Weather is the condition for a short time (hours or days) and changes quickly, for example cold in the morning and heat at noon. Climate is the average weather of a place over 30 years and changes very slowly. Weather tells us what it will be like today or tomorrow, while climate tells us what kind of weather a region usually has.

Question: How do human activities affect the climate?

Answer: Man cuts down forests, due to which more carbon dioxide stays in the air. Burning fossil fuels (coal, oil, gas) in vehicles and factories also increases carbon dioxide. Cows and other animals release methane gas. These gases increase the greenhouse effect, which makes the Earth warmer and changes the climate.

Question: What is the greenhouse effect?

Answer: A greenhouse is a house of glass which lets the heat of the sun come in but stops it from going out, so that the plants stay warm. In the same way, gases like carbon dioxide and methane in the atmosphere trap the heat of the sun near the Earth. This process is called the greenhouse effect. When these gases increase, the Earth becomes warmer, which is called global warming.

Question: Describe the positive and negative effects of climate.

Answer: Positive effects: in a good climate crops grow well, water is available and people stay healthy; in cold regions snow sports (ice hockey, skating, skiing) are played and in warm regions cricket and football are played. Negative effects: in extreme heat or cold it becomes difficult to work, less rainfall spoils the crops and causes drought, and heavy rainfall causes floods which harm people and crops.

Question: Give three actions to protect our Earth individually and three actions socially.

Answer: Individually: (1) Follow the three Rs — Reduce, Reuse, Recycle; (2) save electricity and fuel and use clean energy (sun, wind, water); (3) plant trees and eat less beef. Socially: (1) join groups and spread awareness to protect the environment; (2) take part in tree-planting (reforestation) programmes; (3) use public transport and dispose of trash properly.

Question: What are the factors which affect the climate? Explain them.

Answer: There are three main factors: (1) Latitude: at the Equator the sun's rays are concentrated on a small area and travel a shorter path, so it is hotter there. (2) Altitude: the temperature falls by 0.6°C for every 100

metres we go up; for example, if it is 30°C in the plains, at 1,000 metres it will be 24°C. (3) Distance from the sea: water heats and cools slowly, so Karachi is less hot in summer and less cold in winter than Jacobabad.

Question: What are the general types of climate?

Answer: There are four general types of climate: (1) Equatorial climate — near the Equator, hot all the year, only one season, summer. (2) Tropical climate — a long hot summer and a short cool winter. (3) Temperate climate — neither very hot nor very cold, four seasons. (4) Polar climate — below freezing all the year, only one season, winter. In each type of climate, the dress, food and houses of the people are according to it.

Exercise C: Complete the table

Question: In a table, describe the differences in dress, food, recreation and houses in the Equatorial, Tropical, Temperate and Polar regions.

Answer: 1. Equatorial Region — Dress: light cotton clothes; Food: fresh fruits and vegetables; Recreation: water games; Houses: open and airy. 2. Tropical Region — Dress: light clothes in summer, slightly warm clothes in winter; Food: vegetables, fruits, curd and lassi; Recreation: cricket, hockey, football; Houses: open and airy with straight roofs. 3. Temperate Region — Dress: both light and warm clothes according to the season; Food: meat, eggs, pulses and fruit; Recreation: all kinds of games; Houses: protected from the weather, roofs are also slanting. 4. Polar Region — Dress: very warm woollen clothes and fur; Food: meat and energy-giving food; Recreation: ice hockey, skating, skiing; Houses: insulated to keep the heat in, with slanting roofs so that the snow slides off.

Exercise D: Practical work

Question: Practical work: Draw a map of Pakistan and colour its climatic regions.

Answer: On a map of Pakistan, colour the northern mountainous region in one colour (cold region), the Indus Plains in another colour (hot summer), the coast in a third colour and the deserts in a fourth colour. Against each colour, write the name of the region and the features of its climate, for example that there is snowfall in the mountainous region in winter.

Question: Practical work: Draw an outline map of the world and colour the general climatic regions.

Answer: On an outline map of the world, use different colours for the belt near the Equator for the Equatorial climate, on both its sides for the Tropical climate, in the middle for the Temperate climate and near the poles for the Polar climate. Make a key on one side showing which colour stands for which climate.

Question: Practical work: Draw a bar graph of the rainfall in Sindh from 2001 to 2010 (in mm): 2001: 129, 2002: 312, 2003: 97, 2004: 172, 2005: 65, 2006: 535, 2007: 199, 2008: 126, 2009: 231, 2010: 356.

Answer: On graph paper, take the years (2001 to 2010) on the horizontal side and the rainfall in millimetres (0 to 550) on the vertical side. Draw a bar up to the height of each year's value: the tallest bar will be of 2006 (535 mm) and the shortest of 2005 (65 mm). The graph will clearly show that the rainfall in Sindh is not the same every year; in some years it is very high and in some years very low.

Question: Practical work: Name the areas marked A to E in Figure 3.3 and give the type of climate of each.

Answer: A: North America — Temperate climate; B: Central Africa — Tropical climate; C: Australia — Temperate climate; D: Asia (China) — Tropical climate; E: South America (Brazil) — Tropical climate. These types are recognized from the latitude of these areas (their distance from the Equator).

Exercise E: Extension activity

Question: Extension activity: Choose one city from each climatic region of Pakistan and write about its climate and the life of the people there.

Answer: (1) Mountainous Region — Murree: cool and pleasant in summer, snowfall in winter; people wear warm clothes and many tourists visit. (2) Plains — Jacobabad: extremely hot in summer, the hot wind "Loo" blows; people wear light clothes and avoid the heat in the day. (3) Coast — Karachi: moderate all the year, the sea breeze blows; people do the business of fish. (4) Desert — Tharparkar: very hot and dry, little rainfall; people rear animals and store water.

Question: Extension activity: Make a poster to create awareness about climate change.

Answer: On a big sheet, draw a picture of the Earth in the centre and write these sentences around it: "Plant trees, save the Earth", "Save electricity", "Do not waste water", "Use bicycles and public transport". In the poster, show that cutting forests and increasing smoke make the Earth warmer. Put the poster on the school board so that all the students can read it.

Why Do We Learn History?

Activities (given in the chapter)

Question: Activity: Make a "time capsule" box: put things in it which tell about life today and close it, so that people in the future can learn about our times.

Answer: In a strong box, put today's newspaper, a coin and a note, a picture of your school uniform, a picture of a mobile phone, a picture of your class and pictures of famous things of today. Write today's date on the box and keep it in a safe place. When it is opened after many years, people will see how we lived, what we wore and what things we used — in this way history reaches the coming generations.

Question: Activity: Solve the timeline problems: (a) Saleem was born in 50 AD and lived for 40 years. When did he die? (b) Mariam was born in 90 BC and lived for 60 years. When did she die? (c) Sharukh was born in 105 BC and died in 40 BC. How long did he live? (d) Angela died in 95 AD at the age of 72. When was she born?

Answer: (a) 50 + 40 = he died in 90 AD. (b) 90 − 60 = she died in 30 BC; in BC the years are counted backwards. (c) 105 − 40 = he lived for 65 years. (d) 95 − 72 = she was born in 23 AD. Remember: the years of AD go forward and the years of BC go backwards.

Question: Activity: Write the names of the months of the solar calendar and tell when the last leap year was and when the next one will be.

Answer: The twelve months of the solar calendar are: January, February, March, April, May, June, July, August, September, October, November, December. The Earth completes its revolution around the sun in about

365¼ days; the quarter days add up to make one extra day every fourth year, which is called a leap year (366 days), and February has 29 days. The last leap year was 2024 and the next leap year will be 2028.

Exercise A: Multiple Choice Questions — tick the correct answer

How many days are there in a leap year?

(a) 365

(b) 364

✓ (c) 366

(d) 360

How many days are there in the month of February in a leap year?

(a) 28

(b) 30

✓ (c) 29

(d) 31

How many years are there in a decade?

✓ (a) 10

(b) 100

(c) 1000

(d) 12

How many years are there in a century?

(a) 10

✓ (b) 100

(c) 1000

(d) 50

How many years are there in a millennium?

(a) 100 years

(b) 500 years

(c) 1000 years

(d) 10 years

Exercise B: Answer the following questions

Question: Why do we learn history?

Answer: History is the study of how people lived in the past. We learn history so that we can understand the world of today: where our language, dress, laws and government came from, and why other peoples live in ways different from ours. From history we can learn from the successes and failures of the past and make our world better, so that we do not repeat the mistakes made before.

Question: What do BC, AD and AH stand for?

Answer: BC stands for "Before Christ", that is, the years before the birth of Jesus Christ, which are counted backwards. AD stands for the Latin words "Anno Domini", which mean "the year of our Lord"; these years are counted from the birth of Jesus Christ, for example Sir Syed Ahmed Khan was born in 1817 AD. AH stands for "After Hijrah"; the lunar calendar begins from the year when the Holy Prophet (PBUH) migrated from Makkah to Madina.

Question: Name the twelve months of the solar calendar and the twelve months of the lunar calendar.

Answer: Months of the solar calendar: January, February, March, April, May, June, July, August, September, October, November, December. Months of the lunar calendar: Muharram, Safar, Rabi-ul-Awwal, Rabi-ul-Sani, Jamadi-ul-Awwal, Jamadi-ul-Sani, Rajab, Shaban, Ramadan, Shawwal, Ziqaad (Dhul-Qa'dah), Zilhaj (Dhul-Hijjah). The solar year is based on the sun and the lunar year on the cycles of the moon.

Question: How many days are there in a week, a month and a year?

Answer: There are 7 days in a week. A solar month has 28 to 31 days (February has 28, and 29 in a leap year), while a lunar month has 29 or 30 days. A solar year has 365 days (366 in a leap year) and a lunar year has about 354 days, so the lunar year is 11 days shorter than the solar year.

Question: How many years are there in a decade, a century and a millennium?

Answer: A decade has 10 years, a century has 100 years and a millennium has 1000 years. These long periods help us to arrange and remember events in history; for example, Pakistan was created in the 20th century, in 1947 AD.

Question: Compare the solar and lunar calendars.

Answer: The solar calendar is based on the Earth's revolution around the sun; its year has 365 days (366 in a leap year) and its first year begins from the birth of Jesus Christ. The lunar calendar is based on the moon's revolution around the Earth; its months have 29 or 30 days, its year has about 354 days and it begins from the Hijrah (Makkah to Madina). The solar year is 11 days longer than the lunar year, so the lunar months move backwards in the solar calendar every year.

Exercise C: Complete the table

Question: Make a table of the twelve months of the solar calendar and the twelve months of the lunar calendar.

Answer: Solar calendar: 1. January 2. February 3. March 4. April 5. May 6. June 7. July 8. August 9. September 10. October 11. November 12. December. Lunar calendar: 1. Muharram 2. Safar 3. Rabi-ul-Awwal 4. Rabi-ul-Sani 5. Jamadi-ul-Awwal 6. Jamadi-ul-Sani 7. Rajab 8. Shaban 9. Ramadan 10. Shawwal 11. Ziqaad (Dhul-Qa'dah) 12. Zilhaj (Dhul-Hijjah). Both calendars have twelve months, but their starting points and the

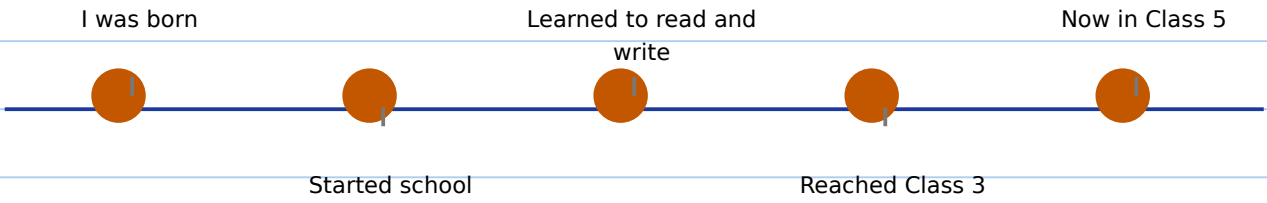

counting of days are different.

Exercise D: Practical work

Question: Practical work: Make a timeline of the important events of your own life and paste your photographs with it.

Answer: Draw a straight line and write the important events of your life on it with their years: your birth, starting school, learning to read and write, winning a prize in a game, and your present class. Paste a photograph of that time with each event and write a short note below it. The figure below is a model; every student will make a timeline of his or her own events.

Timeline of My Life

Exercise E: Extension activity

Question: Extension activity: Find your date of birth on both the calendars (solar and lunar).

Answer: First write your solar date of birth (day, month, year), for example 12 March 2015 AD. Then, with the help of a lunar calendar or an internet date converter, find the same date in Hijri, for example 21 Jamadi-ul-Awwal 1436 AH. Write both dates in your notebook. In this way you will learn that the same day is written with different dates in the two calendars, because their starting points and the lengths of their years are different.

The Struggle for Independence

Activities (given in the chapter)

Question: Activity: Write a note on the contributions of Sir Syed Ahmed Khan.

Answer: After the War of 1857, the British blamed the Muslims for it and treated them harshly. Sir Syed Ahmed Khan explained the real causes of the war to the British and advised the Muslims to get modern education instead of keeping aloof. He urged the Muslims to learn English and science along with Islamic studies. He founded the MAO College at Aligarh, which became the Aligarh Muslim University in 1920. His educational, religious and political services gave a new life to the Muslims.

Question: Activity: On a map of the world, colour the Central Powers of the First World War (Germany, Austria, Turkey) red and the Allies (Britain, France, Japan, Russia, USA) blue.

Answer: On the map, colour Germany, Austria and Turkey red; these were the Central Powers. Colour Britain, France, Japan, Russia and the USA blue; these were the Allies. This war lasted from 1914 to 1918. Looking at the colours, it will be clear that most of the big countries of the world were divided into two groups in the war.

Question: Activity: Which areas did Allama Iqbal propose for a separate Muslim state in his address? Make a list of them.

Answer: In his Allahabad address of December 1930, Allama Muhammad Iqbal proposed that Punjab, the North-West Frontier Province (now Khyber Pakhtunkhwa), Sindh and Balochistan should together form a separate state for the Muslims. This was the first time in history that the idea of a

separate homeland for the Muslims of the subcontinent was put forward. This very idea later took the shape of the Pakistan Resolution.

Question: Activity (Conflict Resolution): What ways do people use to solve a conflict? Which of these ways did the people of India use, and what was the result? What other solution could there have been?

Answer: The ways to solve a conflict are: Communicate, Negotiate, Mediate, Arbitrate, Litigate and Legislate. The people of India used communication, negotiation and legislation; the Muslim League and the Congress held talks with the British, and in the end the Indian Independence Act 1947 was passed. The result was that two separate independent countries, Pakistan and India, were created. Another possible solution could have been that the Muslims got a guarantee of full religious freedom and equal rights in one united country, but due to the historical conditions it was not possible.

Exercise A: Multiple Choice Questions — tick the correct answer

In which year was the War of Independence fought?

(a) 1856

✓ (b) 1857

(c) 1757

(d) 1947

In which year was the Congress formed?

(a) 1906

✓ (b) 1885

(c) 1916

(d) 1940

In which year was the Muslim League formed?

(a) 1885

(b) 1906

(c) 1916

(d) 1940

In which year was the Pakistan Resolution passed?

(a) 1930

(b) 1935

(c) 1940

(d) 1947

Who transferred power in 1947?

(a) Lord Curzon

(b) Lord Wavell

(c) Lord Mountbatten

(d) A. O. Hume

Exercise B: Answer the following questions

Question: List three problems that the Muslims faced after the failure of the War of Independence.

Answer: (1) The British put all the blame of the war on the Muslims and treated them with cruelty and revenge. (2) The jobs and lands of the Muslims began to be taken away and they became doubtful in the eyes of the government. (3) The Muslims were left behind in education, because English had replaced Persian as the official language but they stayed away from modern education. Due to these problems the Muslims became weak economically and socially.

Question: Why was the Muslim League formed?

Answer: After its formation, the Congress gradually became a Hindu party and the rights of the Muslims began to be ignored. The Partition of Bengal in 1905 and later events made the Muslims feel that they needed a

separate political party to protect their rights. So, in 1906, Nawab Salimullah and other leaders formed the Muslim League. Its aim was to protect the rights of the Muslims, and from 1913 it also began to demand self-government.

Question: Why did the Muslims demand a separate homeland?

Answer: After the elections of 1937, the Congress formed governments in seven provinces. In those provinces "Vande Mataram" was made the anthem, Hindi replaced Urdu and cow slaughter was banned. Because of this, the Muslims found it difficult to protect their religion, language and culture. The Nehru Report 1928 also showed that in a united country the Muslims would remain a minority. So the Muslims became sure that their rights could be safe only in a separate homeland, and they demanded Pakistan.

Question: Why is freedom important?

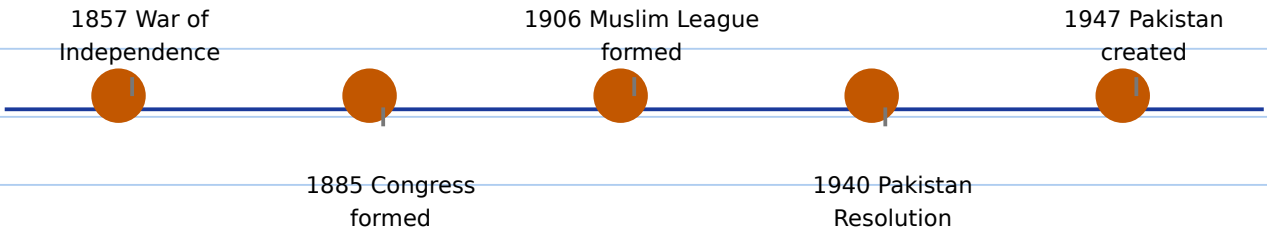

Answer: Freedom is important because in a free country people can practise their religion and live according to their language and culture freely. A free nation takes its own decisions, makes its own laws and works itself for the progress of its country. In slavery, the rights of the people are taken away and they have to obey the orders of others. Therefore, freedom is the greatest blessing for every nation, and it is the duty of everyone to protect it.

Question: Make a timeline of the important events in each decade from 1857 to 1947.

Answer: 1857: War of Independence. 1885: Congress formed. 1905: Partition of Bengal. 1906: Muslim League formed. 1916: Lucknow Pact — Congress accepted separate electorates. 1919–1924: Khilafat Movement. 1928: Nehru Report. 1929: Quaid-i-Azam's Fourteen Points. 1930: Allama Iqbal's Allahabad address; Round Table Conferences began. 1937:

elections, Congress governments. 1940: Pakistan Resolution. 1945–46: elections, the Muslim League won all the Muslim seats in the Central Assembly. 1947: Pakistan created. The timeline figure is given below.

Timeline of the Struggle for Independence

Question: Describe two important events of the 1930s and two of the 1940s which led to the creation of Pakistan.

Answer: The 1930s: (1) Allama Iqbal's Allahabad address (1930), in which the idea of a separate Muslim state was put forward for the first time. (2) The attitude of the Congress governments towards the Muslims after the elections of 1937, which made the Muslims sure of the need for a separate homeland. The 1940s: (1) The Pakistan Resolution (23 March 1940), in which independent Muslim states were formally demanded. (2) The elections of 1945–46, in which the Muslim League won all the Muslim seats and proved that the Muslims wanted a separate homeland.

Question: What was the effect of (a) the First World War and (b) the Second World War on the struggle for independence?

Answer: (a) In the First World War (1914–1918) the British promised self-government in return for the help of the Indians, but the promise was not fulfilled, which increased the anger of the people. After the war the Khilafat Movement began and the Muslims became more organized. (b) In the Second World War (1939–1945) Britain became weak. The Congress demanded the transfer of power and its governments resigned; the

Muslims observed 22 December 1939 as the "Day of Deliverance". After the war the United Nations (UN) was formed and it became difficult for Britain to rule India any longer, so independence was given in 1947.

Question: What might have happened if: (a) the British had not come to India; (b) the Muslims had not formed the Muslim League; (c) the British had not fought in the Second World War; (d) the Muslim League had not passed the Pakistan Resolution?

Answer: (a) If the British had not come, the states of the subcontinent would have remained free, the people would have progressed in their own languages and culture, and the wealth of this land would not have gone abroad. (b) If the Muslim League had not been formed, no one would have protected the rights of the Muslims and they would have been left at the mercy of the Congress. (c) If the British had not fought in the Second World War, Britain would have remained strong and independence would have been delayed for long. (d) If the Pakistan Resolution had not been passed, the demand for a separate homeland would not have taken a formal shape, and the creation of Pakistan would have become difficult or impossible.

Exercise C: Complete the table

Question: Make a table of the people, ideas, events and decisions that had a great impact on the struggle for independence.

Answer: People: Sir Syed Ahmed Khan — turned the Muslims towards modern education; Quaid-i-Azam Muhammad Ali Jinnah — led the Muslim League and achieved Pakistan; Allama Iqbal — gave the idea of a separate homeland. Idea: the Two-Nation Theory — the Hindus and the Muslims are two separate nations. Events: the War of 1857, the Partition of Bengal 1905, the Pakistan Resolution 1940. Decisions: acceptance of separate

electorates in the Lucknow Pact 1916; the Muslims' vote for the Muslim League in the elections of 1945–46; the Indian Independence Act 1947.

Exercise D: Practical work

Question: Practical work: Find out about Sir Syed Ahmed Khan, Allama Iqbal and the Quaid-i-Azam, and write three good qualities of each.

Answer: Sir Syed Ahmed Khan: (1) Farsighted — he thought about the future of the Muslims beforehand; (2) Lover of education — he founded the MAO College; (3) Reformer — he tried to remove the misunderstandings between the British and the Muslims. Allama Iqbal: (1) A great poet and thinker — he awakened the nation through his poetry; (2) Brave — he boldly presented the idea of a separate homeland at Allahabad; (3) Patriotic — he worked all his life for the betterment of the Muslims. Quaid-i-Azam Muhammad Ali Jinnah: (1) Honest and an expert of law; (2) Firm and determined — he did not give up the demand despite difficulties; (3) A caring leader — he did everything in a peaceful and constitutional way.

Question: Practical work: Collect articles and photographs about the struggle for independence and make a display in the classroom.

Answer: From newspapers, magazines and books, cut and collect the photographs of Sir Syed Ahmed Khan, Allama Iqbal and the Quaid-i-Azam, and articles about the Pakistan Resolution and 14 August 1947. Paste them in order on a big sheet and write two or three lines about each photograph below it. Put the display on the classroom wall and let every student narrate one event. In this way the whole class will remember the history of the struggle.

Exercise E: Extension activity

Question: Extension activity: View the film "Jinnah" and discuss it: what do

we learn about the personality of the Quaid-i-Azam from it?

Answer: From the film we learn that Quaid-i-Azam Muhammad Ali Jinnah was a man of principles, honest and an expert of law. He wanted to do everything in a constitutional and peaceful way and never compromised on his principles. He stood firm for the rights of the Muslims and did not lose courage even in difficult times. It was because of his hard work, discipline and truthfulness that Pakistan could be created. We should also learn honesty and determination from his life.

Important People and Events in the History of Pakistan and the World

Exercise A: Multiple Choice Questions — tick the correct answer

Who was the first Prime Minister of Pakistan?

(a) Quaid-i-Azam

✓ (b) Liaquat Ali Khan

(c) Ayub Khan

(d) Zulfiqar Ali Bhutto

In which year did the first man walk on the Moon?

(a) 1957

✓ (b) 1969

(c) 1973

(d) 1992

Who became the Prime Minister of Pakistan after the election of 2013?

(a) Yousaf Raza Gilani

✓ (b) Nawaz Sharif

(c) Raja Pervez Ashraf

(d) Shaukat Aziz

In which year was the hole in the ozone layer discovered?

(a) 1979

✓ (b) 1985

(c) 1990

(d) 2005

For what did Mother Teresa receive the Nobel Prize?

(a) Physics

(b) Chemistry

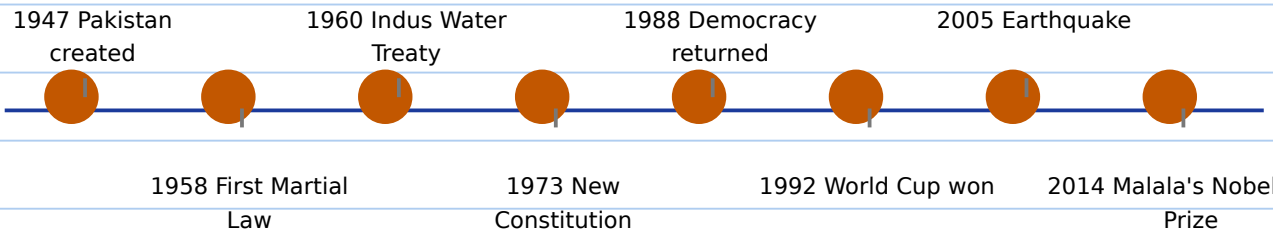

✓ (c) Promoting Peace

Exercise B: Answer the following questions

Question: Make a timeline of the history of Pakistan from the 1940s to 2014, choosing one event from each decade.

Answer: 1940s: Pakistan was created on 14 August 1947; the Quaid-i-Azam died in 1948. 1950s: the first Martial Law was imposed in 1958. 1960s: the Indus Water Treaty was signed in 1960. 1970s: the new Constitution was enforced in 1973 and the country was named the "Islamic Republic of Pakistan". 1980s: Benazir Bhutto became the Prime Minister in 1988 and democracy returned. 1990s: Pakistan won the Cricket World Cup in 1992. 2000s: a severe earthquake struck Azad Kashmir in 2005. 2010s: Malala Yousufzai was awarded the Nobel Peace Prize in 2014. The timeline figure is given below.

Timeline of the History of Pakistan

Question: Make a timeline of the inventions from 1940 to 2014.

Answer: 1949: the first computer was built, which was very big. 1950: the first modern credit card was made. 1951: colour television came. 1952: the polio vaccine was made. 1957: the Russians launched the Sputnik satellite into space; the space age began. 1970: the pocket calculator was

made. 1981: the personal computer (IBM) was introduced. 1994: the use of the internet began. 1996: scientists cloned the sheep Dolly. These inventions changed the life, knowledge and means of communication of the people.

Question: Identify two problems from the chapter and write the short-term and long-term effect of each.

Answer: Problem 1: the earthquake of 2005. Short-term effects: more than 80,000 people died, about four million people became homeless, schools and hospitals were destroyed. Long-term effects: the affected areas took many years to be rebuilt, and people learnt the importance of making earthquake-safe buildings. Problem 2: the hole in the ozone layer. Short-term effect: more harmful rays of the sun began to reach the Earth. Long-term effects: the danger of skin diseases increased, and the countries of the world had to work together to save the environment.

Question: Name a problem that started in the past and still exists in Pakistan today, and tell two things being done to solve it.

Answer: The problem is the large number of uneducated people (illiteracy). At the time of the creation of Pakistan most people were uneducated, and even today many children do not go to school. Things being done to solve it: (1) The government is building new schools, giving free textbooks and hiring teachers. (2) Many organizations and the media create awareness among parents to send their children, especially girls, to school. Only through education can the country progress.

Question: Compare the events of the early history of Pakistan (1940s to 1960s) with the events of today.

Answer: In the 1940s and 1950s the main concern was the creation of the country and the settlement of the refugees; the death of the Quaid-i-Azam in 1948 was a great shock for the nation. In the 1960s the Indus Water

Treaty and the war of 1965 were important events. In today's times, democratic governments change through elections, as in 2013 an elected government completed five years for the first time. Today's big events are related to education, technology and sports, for example Malala's Nobel Prize. In both periods the nation has remained united in difficult times.

Question: What would have happened if: (a) the Quaid-i-Azam had not worked to create Pakistan; (b) Mandela had stayed in jail; (c) Benazir Bhutto had not been assassinated?

Answer: (a) If the Quaid-i-Azam had not worked, Pakistan might not have been created and the Muslims of the subcontinent would have lived under the rule of others; the protection of their religion and culture would have been difficult. (b) If Nelson Mandela had stayed in jail, the system of discrimination against the black people (apartheid) in South Africa would have lasted much longer and they would have got equal rights late. (c) If Benazir Bhutto had not been assassinated, she might have become the Prime Minister in 2008 and the politics of the country could have taken a different direction.

Question: What was the impact on history of: (a) the creation of Pakistan; (b) the invention of the computer?

Answer: (a) With the creation of Pakistan, the Muslims of the subcontinent got their own free country, where they could live according to their religion and culture. A large Muslim country appeared on the map of the world, and millions of people migrated and started a new life. (b) The invention of the computer changed the ways of work, knowledge and communication of the people. Today computers are used in schools, hospitals, banks and homes, and with the help of the internet the information of the whole world is available in a few seconds.

Question: Compare life in the early decades of Pakistan (1940s–1950s)

with life in the 2000s–2010s.

Answer: In the early decades life was simple: there were no mobile phones, computers or internet; people communicated by writing letters; there were few vehicles and most people travelled on tongas and bicycles; the villages had no electricity. In the 2000s life became fast: every home has a television, a mobile phone and a computer; people are connected with the whole world through the internet; cities became big and travelling became easy. But some problems are still the same today, such as many people being uneducated.

Exercise C: Complete the table

Question: Make a table of the key idea of the following people and its effects on our lives: Quaid-i-Azam, Zulfiqar Ali Bhutto, Nelson Mandela, Mother Teresa.

Answer: Quaid-i-Azam Muhammad Ali Jinnah — Key idea: a separate homeland for the Muslims on the basis of the Two-Nation Theory; Effect: today we live in a free Pakistan and live our lives freely according to our religion and culture. Zulfiqar Ali Bhutto — Key idea: "roti, kapra aur makan" (food, clothing and shelter) — the rights of the common man; Effect: the common man became aware of his rights and work for the betterment of the poor began. Nelson Mandela — Key idea: freedom, equality and the end of racial discrimination; Effect: apartheid ended in South Africa and the whole world learnt the lesson of equality and forgiveness. Mother Teresa — Key idea: service to the poor and the destitute; Effect: the spirit of helping others and serving the needy grew all over the world.

Exercise D: Practical work

Question: Practical work: Choose a current event in Pakistan and write a

report of 100 words about it from a newspaper, radio, television or the internet. (Model: a tree-planting campaign)

Answer: (Model report) Last week, under the "Green Pakistan" campaign, the students and teachers of schools in our city together planted one thousand saplings. This campaign was carried out in parks, along roadsides and in schools. The district officer said that trees keep the air clean, reduce the heat and give homes to the birds. The students promised that they would water and protect every plant themselves. Experts say that if every person plants one tree, our country can become green and the climate can improve. Everyone should take part in such work. (Every student should write such a report on his or her chosen current event.)

Question: Practical work: Choose a current world event and identify the viewpoint presented in it.

Answer: When you read or watch the news of a world event, think: Who has written the news? In which words has the event been shown as good or bad? Has the point of view of both sides been given? For example, in the news of a war or a protest, one channel shows the suffering of the people of one side and another channel shows that of the other side. Write in your notebook which side the presenter of the news is on and what your proof is. Always check the news from more than one source.

Question: Practical work: Make a list of three good qualities each of Benazir Bhutto and Mother Teresa.

Answer: Benazir Bhutto: (1) Brave — she returned to the country even in difficult conditions; (2) An educated and wise leader — she became the Prime Minister twice; (3) Caring — she spoke for the rights of the poor and of women. Mother Teresa: (1) Kind and merciful — she served the poor all her life; (2) Selfless — she looked after the sick and the destitute without

any greed; (3) Patient and hardworking — despite few resources she did great work and received the Nobel Peace Prize.

Question: Practical work: Find out about the earthquake of 2005 and write a paragraph of 100 words on it.

Answer: On 8 October 2005 a severe earthquake struck Pakistan, whose intensity was 7.6 and whose centre was in Azad Kashmir. More than 80,000 people died in it and about 4 million people became homeless. Many villages, schools and hospitals were completely destroyed. The Pakistan Army, the government and the people of the whole country helped the affected people; food, tents and medicines were delivered. Other countries also sent help. This earthquake was one of the biggest natural disasters in the history of Pakistan. From it we learnt that buildings should be made strong and that we should help each other in times of disaster.

Question: Practical work: Write a paragraph about the Berlin Wall: why it was built and why it was torn down.

Answer: After the Second World War, Germany was divided into two parts: East Germany and West Germany. In 1961 the government of East Germany built a big wall in the middle of the city of Berlin so that people could not go from the east to the west. This wall separated even families. In 1990, due to the protests of the people and the changes in the world, the wall was brought down and the two parts joined together again to become one Germany. Today this wall teaches us that dividing people is wrong.

Question: Practical work: Why was Malala Yousufzai awarded the Nobel Peace Prize?

Answer: Malala Yousufzai is a brave girl of Pakistan who raised her voice for the education of girls. When in her area girls were stopped from going

to school, she fearlessly spoke and wrote for the right of education. Because of this she was attacked, but she survived and continued her struggle. In 2014 she was awarded the Nobel Peace Prize for her work for the education of girls; she became the youngest person to receive this prize. Her work is an example of courage for girls all over the world.

Exercise E: Extension activity

Question: Extension activity: In groups, research one of these topics and present it to the class: (a) the Muslim Family Laws Ordinance 1961; (b) the system of local government; (c) What is democracy? Why is it important?

Answer: As a model, topic (c): Democracy is the system in which the people elect the government and the rulers are the representatives of the people. It is important because in it every citizen gets the right to vote, the law is equal for everyone and people can give their opinion freely. For (a): the Ordinance of 1961 gave more rights to women and children, for example protection in family matters. For (b): local government solves the local problems of the people (cleanliness, water, streets) at the village and town level. Every group should collect information from newspapers, books and elders, make a chart and present it to the class.

Culture

Activities (given in the chapter)

Question: Activity: Write a paragraph about your own culture covering dress, food, language, customs and traditions. (Model: Sindhi culture)

Answer: (Model) I belong to the Sindhi culture. Our language is Sindhi. Men wear shalwar kameez with Ajrak and a Sindhi topi, and women wear colourful embroidered clothes. Among our favourite foods, saag (leafy vegetables), rice-flour roti and fish are famous. Special customs are performed at weddings and on Eid, hospitality is our great identity, and the Urs of Sufi saints are celebrated with great devotion. (Every student will write such a paragraph about his or her own culture.)

Question: Activity: Name at least five cultural groups living in Pakistan.

Answer: Many cultural groups live in Pakistan, five of which are: (1) Sindhi, (2) Punjabi, (3) Pakhtun, (4) Balochi, (5) Siraiki. Besides these, Kashmiri, Hazara, Gilgiti and other groups also live here. Every group has its own language, dress and foods, but all of them are Pakistanis.

Question: Activity: Identify the similarities and differences among the cultural groups in Pakistan.

Answer: Similarities: all the groups speak and understand Urdu, eat vegetables and roti and wear shalwar kameez; most of them are Muslims and celebrate the Eids together. Differences: the language of every region is different (Sindhi, Punjabi, Pushto, Balochi); the special foods are different, for example sarson ka saag and makai ki roti in Punjab, and Sajji and Chapli Kabab among the Pakhtuns; the embroidery designs on the dress and the festivals are also different in every region, for example Ekta

Day in Sindh and the Sibi Mela in Balochistan.

Question: Activity: List the handicrafts produced in Sindh.

Answer: The famous handicrafts of Sindh are: (1) Ajrak — the traditional printed cloth; (2) Rilli — a quilt/cover made of colourful pieces; (3) the Sindhi topi and embroidery; (4) the blue pottery of Hala; (5) calligraphy; (6) decorated buses and truck art. These handicrafts are the means of livelihood of many families and present the identity of Sindh to the world.

Question: Activity: List the advantages for individuals and society from encouraging respect in a multicultural society.

Answer: When people respect each other's culture, friendship and trust increase and peace and harmony are created in society. By learning from different cultures, people become open-minded and learn new ways of solving problems. Society becomes united, due to which the country moves towards progress and prosperity. On the contrary, lack of respect causes quarrels, violence and loss.

Question: Activity: Find out about the culture of a country of your choice, write about it and display it with pictures in the class. (Model: China)

Answer: (Model: China) China is the northern neighbour of Pakistan and the most populous country of the world. There, rice is the most common food and people also eat noodles and dumplings; food is eaten with chopsticks. The national language is Mandarin. The biggest festival is the Chinese New Year (Spring Festival), in which houses are cleaned, fireworks are displayed and lion and dragon dances are performed. The arts of China: embroidery, calligraphy, music, opera and porcelain pottery are famous. (Every student will write in the same pattern about a country of his or her choice.)

Question: Activity: List three things you learnt from your family that differ from your friend's.

Answer: (Model) (1) I learnt from my family to say salaam to the elders and to respect them, while my friend calls everyone by name. (2) In our home, food is eaten together with the hands, while in my friend's home spoons and forks are used and everyone eats at his own time. (3) In our home, all the relatives gather on Eid, while my friend goes out with his grandparents. These differences are due to the habits and traditions of every family.

Exercise A: Multiple Choice Questions — tick the correct answer

What kind of society is Pakistan?

(a) One culture

(b) Two cultures

✓ (c) Multicultural

(d) No culture

Which is the first institution of socialization?

✓ (a) Family

(b) School

(c) Media

(d) Friends

Which language is spoken by the largest number of people in the world?

(a) English

✓ (b) Mandarin

(c) Urdu

(d) Hindi

Which are the two main groups of Sri Lanka?

✓ (a) Sinhalese and Tamils

(b) Punjabis and Sindhis

(c) Chinese and Japanese

(d) English and French

Which is the most populous country of the world?

(a) China

(b) India

(c) USA

(d) Pakistan

Exercise B: Answer the following questions

Question: Define the term "culture".

Answer: Culture is the ways of living which the people of a group build up and pass on from one generation to another. It includes dress, food, language, customs and traditions (marriage, religious practices), books, music, buildings and rules of behaviour. Culture also keeps changing slowly with time and with interaction with other groups.

Question: What things do all the groups in Pakistan share, and what are the advantages of a common culture?

Answer: All the groups in Pakistan speak and understand Urdu, eat vegetables and roti and wear shalwar kameez. Most of them are Muslims and celebrate the Eids and the national days (14 August, 23 March) together. The advantages of a common culture are: people understand each other easily, national unity is created, and in difficult times the whole nation stands united. Common things bind the different groups together into one nation.

Question: Describe the advantages and challenges of a multicultural society.

Answer: Advantages: by learning from different cultures, people become open-minded and respectful; new foods, arts and ideas are gained; if society is united, progress and prosperity come; the country becomes

strong against external threats. Challenges: if people do not respect each other, misunderstandings, quarrels and violence take place; sometimes, considering one's own language and customs better than others creates distance. Therefore, it is necessary to teach respect and tolerance.

Question: Compare the culture of Pakistan with the culture of one of the three countries given in the chapter. (Model: China)

Answer: Food: in Pakistan roti and vegetables are common; in China rice and noodles are common and food is eaten with chopsticks, while in Pakistan most people eat with their hands. Dress: the national dress of Pakistan is shalwar kameez; in China the traditional dresses are the Cheongsam and the Chinese Tunic Suit, but today modern clothes are common in both countries. Language: the national language of Pakistan is Urdu; of China, Mandarin. Festivals: in Pakistan the Eids and 14 August are celebrated; in China the Chinese New Year is the biggest festival. In both countries, respect for the family and the elders is an important value.

Question: In what ways does a child become part of a cultural group?

Answer: A child learns his culture through socialization. (1) Family: it is the first institution; the child learns the mother tongue, saying salaam to the elders, prayers and the manners of eating from home. (2) School: by coming on time, wearing a neat uniform, waiting in line and working together, he learns punctuality, cleanliness and teamwork. (3) Religious institutions: they teach the way to pray, the holy book and values; the ceremonies of birth, marriage and death are also connected with religion. In this way the child gradually adopts the way of life of his group.

Exercise C: Complete the table

Question: Make a table: which cultural characteristics are only in my friend, which are common to both of us, and which are only in me? (Model)

Answer: (Model) Only in my friend: he speaks Siraiki, Siraiki folk songs are sung in his home, he wears the Multani khussa. Common to both of us: we speak Urdu, wear shalwar kameez, play cricket, celebrate Eid together and respect the elders. Only in me: I speak Sindhi, I wear Ajrak and the Sindhi topi, rice-flour roti and fish are cooked in our home. This table shows that despite the differences, the common things between us are more. (Every student will make his or her own table by comparing with a friend.)

Exercise D: Practical work

Question: Practical work: Interview your parents about their way of life, write about your own way of life, compare the two and identify the change and its causes.

Answer: (Model) In their childhood my parents lived in a village; they went to school barefoot or in simple shoes, studied at night in the light of an oil lamp, and all the family sat together to eat food and talk. In my life there is electricity, a fan, television, a mobile phone and the internet; I go to school by bus or rickshaw. The causes of the change are: the progress of technology, the growth of cities, education becoming common and the coming of new inventions. Some good habits, such as eating together and respecting the elders, are still the same today.

Question: Practical work: How is technology changing how we live? (a) What devices did your parents use? (b) What devices are used daily today? (c) How has technology altered what we do, our behaviour and our relationships? (d) What changes has technology brought? (e) What changes can you predict for the future?

Answer: (a) In our parents' time the radio, the landline telephone, the black-and-white television and letter writing were common. (b) Today we use the mobile phone, the computer, the internet, the television and the

tablet daily. (c) Now a message reaches in a few seconds, studies and shopping can be done sitting at home, but face-to-face talking has decreased and even family members stay busy with their phones. (d) Technology made work fast and easy, joined the world together and made information easy for everyone. (e) In the future, robots, self-driving cars and more smart devices will come; we shall have to learn the correct use of technology so that its harms are reduced.

Exercise E: Extension activity

Question: Extension activity: Find out about a country of your choice and fill this table: Cultural Characteristics | Pakistan | Country ____ (Model: China)

Answer: (Model: China) Dress: Pakistan — shalwar kameez is the national dress, with regional embroidery; China — the Cheongsam and the Chinese Tunic Suit are traditional, today modern clothes are common. Food: Pakistan — roti, vegetables, pulses, meat; most people eat with their hands; China — rice, noodles, dumplings; eaten with chopsticks, herbal tea is common. Language: Pakistan — Urdu is the national language, regional languages are also spoken; China — Mandarin is the national language. Festivals: Pakistan — Eid-ul-Fitr, Eid-ul-Azha, 14 August; China — the Chinese New Year, the Lantern Festival, the Laba Festival. Arts: Pakistan — Ajrak, Rilli, calligraphy, folk music; China — embroidery, calligraphy, opera, paper-cutting, porcelain. (Every student will make such a table with a country of his or her choice.)

Goods and Services

Activities (given in the chapter)

Question: Activity: Name the things shown in the pictures and tell whether each is private or public: chocolate bar, police, notebook, army (national defence), pencil, street lights.

Answer: (1) Chocolate bar — Private: it is bought from a shop, and if one person eats it, another cannot eat it. (2) Police — Public: it protects all the citizens and is provided by the government. (3) Notebook — Private: it is bought with money and is used by one student. (4) Army (national defence) — Public: it defends the whole country. (5) Pencil — Private: it is bought for personal use. (6) Street lights — Public: all the people benefit from their light and no one can be stopped from using it.

Question: Activity: From the bar graphs in the chapter, find out the three largest exports and the three largest imports of Pakistan.

Answer: Exports (percentage of the total): Cotton Textiles 28%, Rice 16%, Sports Goods 14%, Surgical Instruments 12%, Others 10%, Carpets and rugs 9%, Chemicals 6%, Fruits 5%. The three largest exports are: Cotton Textiles, Rice and Sports Goods. Imports: Fuel 40%, Heavy Machinery 18%, Edible Oil 12%, Manufactured Goods 11%, Wheat 9%, Fertilizers 5%, Tea 3%, Others 2%. The three largest imports are: Fuel, Heavy Machinery and Edible Oil.

Question: Activity: Interview (a) your mother/father and (b) a businessperson: what role does the bank play in his/her life? (Have you been to a bank? Do you have an account? Why did you open it? How often do you go? Do you save money? Have you borrowed? Why?)

Answer: (Model answer) (a) Parents: My father has an account in a bank in which he deposits his salary and pays the bills. He saves money for future needs, for example the education of his children. He took a loan from the bank to buy a house, which he is repaying in instalments. (b) Businessperson: He keeps the income of his shop safe in the bank and takes a loan to buy machinery to expand his business. For both, the bank keeps money safe, helps in saving, and gives loans at the time of need.

Question: Activity: "The State Bank of Pakistan plays an important role in the economic development of our country." Do you agree? Give at least five points.

Answer: Yes, I agree. (1) The State Bank issues the currency notes, so the money system of the country keeps working. (2) It maintains the value of the Pakistani Rupee and controls the exchange rate. (3) It is the bank of the federal and provincial governments and helps in the payment of salaries and pensions. (4) It is the bank of all the commercial banks and gives them loans at the time of need. (5) It maintains relations with international financial institutions like the World Bank and the IMF and helps the government in development planning and poverty reduction. Besides this, it publishes reports about the economy of the country.

Question: Activity: Name two items whose prices are controlled by the government and two items whose prices are determined by demand and supply.

Answer: Prices controlled by the government: (1) wheat flour, (2) sugar — these are the basic needs of the people, so the government fixes their price limits so that everyone can buy them. Prices determined by demand and supply: (1) fruits, (2) clothes — when a thing comes in a large quantity it becomes cheap, and when it comes less it becomes expensive.

Exercise A: Multiple Choice Questions — tick the correct answer

Street lights, police and parks are examples of which goods?

(a) Private goods

✓ (b) Public goods

(c) Exports

(d) Imports

Which is the central bank of Pakistan?

✓ (a) State Bank

(b) Commercial bank

(c) Post office

(d) Treasury

What are the goods produced in one country and sold to other countries called?

✓ (a) Exports

(b) Imports

(c) Taxes

(d) Fees

Which banks accept deposits from the public, lend money and process payments?

(a) State Bank

✓ (b) Commercial banks

(c) Post office

(d) Big shops

What is the economic system of Pakistan?

(a) Fully government

(b) Fully private

✓ (c) Mixed economy

(d) None of these

Exercise B: Answer the following questions

Question: What are private goods and services? Give three examples.

Answer: Private goods and services are those which are produced by a person or a group of persons and sold to the consumers. They become the property of the buyer, and a person who does not pay cannot use them. Examples: (1) restaurant meals, (2) a car or a bicycle, (3) books and clothes. These things can be bought from a shop or a mall.

Question: What are public goods and services? Give three examples.

Answer: Public goods and services are those which are so important that they should be available to everyone; they are provided by the government. In them, neither can anyone be stopped from using them (no excludability), nor does one person's use reduce them for another (no rivalry). Examples: (1) street lights, (2) police protection, (3) parks and roads. The government meets their cost from taxes and fees.

Question: Classify the following into private or public and explain with rivalry and excludability: (i) a packet of chips (ii) a haircut from a barber shop (iii) traffic lights on the street (iv) building roads (v) a bicycle (vi) issuing postage stamps (vii) police protection (viii) a pen (ix) a zoo (x) clothes

Answer: (i) A packet of chips — Private: it has to be bought (excludable) and if one person eats it, it is not left for another (rival). (ii) A haircut — Private: a fee has to be paid and the barber can cut the hair of only one person at a time. (iii) Traffic lights — Public: all drivers see them, no one can be stopped, and one person's seeing does not reduce them for another. (iv) Building roads — Public: the government builds them and everyone uses them. (v) A bicycle — Private: it has to be bought and only one person can ride it. (vi) Issuing postage stamps — Public: it is a government service issued by a government department. (vii) Police

protection — Public: it is for all citizens. (viii) A pen — Private: it is personal property. (ix) A zoo — Public: it is provided by the government, like a park, for which an entrance fee may be charged. (x) Clothes — Private: they are bought and worn by one person.

Question: Why do common people borrow money from banks?

Answer: Common people borrow money from banks to buy high-priced things, because they do not have that much money at one time. For example, a loan is taken to buy a house, to get a car or for the higher education of children. The loan is repaid gradually in instalments. Usually the borrower has to repay more than the amount borrowed.

Question: Why do business persons borrow money from banks?

Answer: Business persons borrow money to set up or expand their business. With this money they buy machinery, raw material and other necessary things. As the business grows, the income increases and the loan is repaid easily. Banks help the economy of the country to grow by giving loans and other financial services for business.

Question: What are exports?

Answer: Exports are the goods and services which are produced in one country and sold to other countries. Pakistan exports rice, cotton and cotton textiles, leather and leather goods and sports goods. From exports the country earns money, with which it buys the things it needs, and the people get employment.

Question: What are imports?

Answer: Imports are the goods which are bought by the buyers in one country from the sellers in other countries. They are brought to meet the needs of the country. Pakistan imports heavy machines and equipment, tools, trucks and other electronic goods, because these are not made in the country in enough quantity.

Question: Why is international trade important for the development of Pakistan?

Answer: Through international trade, Pakistan sells its goods and earns money, and buys the things which it cannot make itself. By this the economy of the country grows, factories run and people get employment. Through trade, the people of different countries learn about each other's culture and life, and interdependence and friendship between countries increase. Therefore, international trade is very important for the development of Pakistan.

Exercise C: Complete the table

Question: Choose five items that Pakistan imports and make a table: Item | Why we import them | Country/Countries we import them from | Currency of that country.

Answer: 1. Fuel (petroleum) — it is needed for vehicles and machines and is not found enough in the country; Country: Saudi Arabia; Currency: Riyal. 2. Heavy machinery — our factories need it and we do not make enough ourselves; Country: China; Currency: Yuan. 3. Edible (palm) oil — the production in the country is less than the demand; Country: Malaysia; Currency: Ringgit. 4. Tea — the demand is higher than the local production; Country: Kenya; Currency: Shilling. 5. Cars and electronic goods — goods of modern technology come from abroad; Country: Japan; Currency: Yen.

Exercise D: Practical work

Question: Practical work: Become "detectives" and make a table of your neighbourhood: (a) five goods/services provided by private businesses (b) their cost (c) five goods/services provided by the government (d) how they are paid for. (Model)

Answer: (Model) (a) Private goods/services: bread (naan), milk, haircut, rickshaw ride, shoe repair. (b) Costs: naan Rs 20, milk Rs 220 per litre, haircut Rs 300, rickshaw ride Rs 100, shoe repair Rs 150 (prices can change with place and time). (c) Government goods/services: street lights, park, government school, police post, road repairs. (d) Payment: the government meets their cost from taxes; a fee is also charged for some services, for example the park entrance fee; sometimes the government also takes loans for these works.

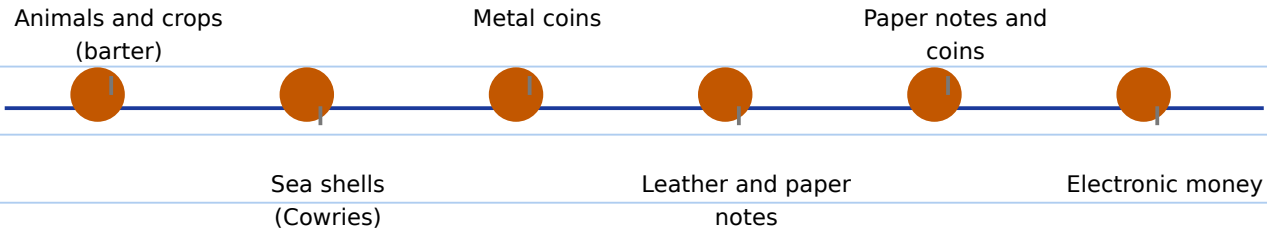

Money in our Lives

Activities (given in the chapter)

Question: Activity: Make a timeline of how money evolved.

Answer: 9000–6000 BC: farm animals were used as a unit of exchange. After that, with agriculture, crops (tea, tobacco), cattle and seeds were exchanged — this system is called the barter system. 1200 BC: sea shells — Cowries in Africa and Wampum in America. 1000 BC: in China, metal tools and metal circles/coins with holes in the middle. 500 BC: silver coins in Turkey imprinted with the faces of emperors and gods. 118 BC: in China, banknotes of leather (deerskin). 9th–14th century AD: the first paper money in China. Today: electronic trade with computers — no actual money changes hands, only the values of the accounts of the buyer and the seller change. The timeline figure is given below.

The Evolution of Money

Question: Activity: List the various ways in which income is generated.

Answer: There are two basic ways of generating income: (1) Making something that others will buy, which is called a "good", for example making and selling homemade biscuits, lemonade and jewellery. (2) Doing work that others will pay for, which is called a "service", for example

cutting hair, sewing clothes and mending shoes. Besides these, people also get a salary from a job, profit from a business and rent from property — all these are ways of generating income.

Exercise A: Multiple Choice Questions — tick the correct answer

What is the system of exchanging goods for goods called?

- ✓ (a) Barter
- (b) Income
- (c) Expenditure
- (d) Currency

What is the currency of the UK?

- (a) Dollar
- (b) Dirham
- ✓ (c) Pound
- (d) Rupee

What is the money that is earned called?

- (a) Expenditure
- ✓ (b) Income
- (c) Loan
- (d) Tax

Which country had paper money first?

- (a) Pakistan
- ✓ (b) China
- (c) Turkey
- (d) India

What is the money that is spent called?

- ✓ (a) Expenditure
- (b) Income

(c) Loan

(d) Saving

Exercise B: Answer the following questions

Question: In chronological order, list the way money evolved.

Answer: (1) 9000–6000 BC: animals were the unit of exchange. (2) After that, the barter system of crops, cattle and seeds continued. (3) 1200 BC: sea shells (Cowries, Wampum) became money. (4) 1000 BC: metal tools and metal coins with holes in China. (5) 500 BC: silver coins in Turkey, later bronze and gold coins. (6) 118 BC: leather banknotes in China. (7) 9th–14th century AD: paper money in China, then paper notes and coins all over the world. (8) Today: electronic trade through computers.

Question: List all the ways people generate income.

Answer: The ways of generating income are: (1) Making and selling goods — for example biscuits, lemonade, jewellery. (2) Providing services — for example cutting hair, sewing clothes, mending shoes. (3) Salary and wages from a job. (4) Profit from a business — whether a small shop or a big company. (5) Rent from property. A person who organizes and manages a business is called an entrepreneur, and he gets the profit.

Question: Give three reasons why people in different professions are paid different wages. Is this fair? Give two reasons.

Answer: Reasons: (1) Education and training: a doctor and an engineer need much education and training, so they are paid more. (2) Skill and experience: the work of a skilled and experienced person is more valuable. (3) The nature of the work and responsibility: some jobs are difficult, dangerous or carry great responsibility. Is this fair? In my view it is fair to some extent, because (a) more hard work and education should be rewarded, otherwise no one would try to learn difficult jobs; but (b) every

honest work should be respected and every worker should get enough wages to meet his basic needs.

Question: Name three goods sold and three services offered in your neighbourhood, write the cost of each, and find out from your parents what it cost when they were your age. (Model)

Answer: (Model) Goods: milk Rs 220 per litre, eggs Rs 360 per dozen, flour Rs 130 per kg. Services: haircut Rs 300, rickshaw ride Rs 100, shoe repair Rs 150. My parents told me that in their childhood milk was about Rs 20 per litre, eggs Rs 30 per dozen and a haircut Rs 20. This shows that prices have increased with time, so today's incomes and wages are also higher than before. (Prices can be different at every place and time; write the actual prices of your neighbourhood.)

Question: Interpret the wages graph given in the chapter (monthly earnings in rupees): Cobbler 6,000; Labourer 8,000; Fruit and Vegetable Seller 12,000; Mason 15,000; Driver 17,000; Bank Cashier 22,000; Teacher 30,000; Engineer 60,000; Doctor 70,000; Bank Manager 90,000. (i) Who earns the lowest? (ii) Who earns the highest? (iii) Who earns more than the engineer and less than the bank manager? (iv) Who earns more than the bank cashier and less than the engineer? (v) Why are these differences there?

Answer: (i) The lowest income is of the Cobbler — Rs 6,000 per month. (ii) The highest income is of the Bank Manager — Rs 90,000 per month. (iii) More than the Engineer (60,000) and less than the Bank Manager (90,000) is the Doctor — Rs 70,000. (iv) More than the Bank Cashier (22,000) and less than the Engineer (60,000) is the Teacher — Rs 30,000. (v) These differences are there because the education, skill, training and experience needed for every job are different; the job which needs more education and responsibility is paid more.

Exercise C: Complete the table

Question: Make a table of ten countries and their currencies.

Answer: 1. Pakistan — Rupee. 2. India — Rupee. 3. Bangladesh — Taka. 4. Afghanistan — Afghani. 5. Saudi Arabia — Riyal. 6. United Arab Emirates — Dirham. 7. USA — Dollar. 8. UK — Pound. 9. China — Yuan. 10. Japan — Yen. Every country has its own currency, and when we trade with other countries we have to see the value of their currency.

Exercise D: Practical work

Question: Practical work: Talk to a businessperson and find out: (i) Where did the idea of the business come from? (ii) How was it planned and started? (iii) Where are the things bought from? (iv) How many people work there? (v) What are the other costs? (vi) Are there partners? (vii) What is their share in the profit? (viii) Who buys the goods? (ix) How is the profit or loss calculated? (Model)

Answer: (Model: a pakora and samosa seller) (i) The idea came because there was no good tea hotel in the neighbourhood and he had the skill of cooking. (ii) From his savings he took a small shop on rent, bought utensils and a stove and took a licence. (iii) He buys flour, oil, potatoes and spices from the wholesale market. (iv) Two people work — he himself and one helper. (v) Other costs: the rent of the shop, gas and electricity bills, the helper's wages. (vi) He has no partner; the business is his alone. (vii) So the whole profit is also his and the loss too. (viii) The people of the neighbourhood, school children and passers-by buy. (ix) Profit = the amount left after deducting all the costs (raw material, rent, bills, wages) from the total sales; if the costs become more than the sales, there is a loss.

Exercise E: Extension activity

Question: Extension activity: Is it alright to acquire money through wrong means, for example stealing, overcharging, or taking money for work you are paid to do? Give three reasons.

Answer: No, it is not alright at all to acquire money through wrong means. (1) It is dishonesty and a sin; stealing and cheating are forbidden in every religion and law, and such a person snatches the rights of others. (2) It harms other people and society; for example, by overcharging, poor people cannot buy the things they need and trust is lost. (3) Money earned in a wrong way does not give peace; there is always the fear of punishment by law and of disgrace, and the person's own respect is also lost. Only money earned honestly gives respect and peace.

Means of Information

Activities (given in the chapter)

Question: Activity: In groups of four, make a class newspaper.

Answer: With your group, divide the newspaper into sections: school news, sports, stories and jokes, students' pictures and drawings. Every student writes the news and articles of one section. Then arrange all the pages and give the newspaper a name, for example "Our School". Display the newspaper on the board in the class so that everyone can read it. If the facility is available, the same newspaper can also be made online.

Question: Activity: Write three merits and three demerits of the radio.

Answer: Merits: (1) The radio is cheap and runs on a battery, so it can be listened to anywhere, even while travelling. (2) It reaches far-off areas and illiterate people can also listen to the news. (3) Along with news, it also gives education and entertainment. Demerits: (1) Pictures cannot be seen on the radio. (2) It is one-way communication; the listener cannot say his own point. (3) Programmes come at fixed times, so a favourite programme cannot be had at all times.

Question: Activity: Write three advantages and three disadvantages of television.

Answer: Advantages: (1) By watching news, documentaries and dramas on television, we get information, education and entertainment all together. (2) With the help of satellite, the events of the world can be watched live. (3) Special educational programmes come for children. Disadvantages: (1) Watching too much TV has a bad effect on the eyes and health. (2) The time for studies and games is reduced. (3) Some programmes also show

wrong or harmful things, so the guidance of parents is necessary.

Question: Activity: Look at some advertisements: what positive things are claimed in them? Also write at least three negative things about each product.

Answer: (Model) The advertisement of cooking oil claims that it is good for the heart and makes the food tasty. The advertisement of a soap claims that it will make the skin fair and lovely. Negative things: (1) Food with too much oil is harmful for health and increases diseases. (2) A soap only helps to stay clean; it cannot guarantee to make the colour fair. (3) Advertisements only tell the good things and hide the faults; they are biased. Therefore, one should shop thoughtfully after watching advertisements.

Question: Activity: Read about the same event in two different newspapers, compare their similarities and differences, and say why they differ.

Answer: Two newspapers can present the same event in different ways: one newspaper highlights one side of the event and the other shows the other side. For example, in the news of a flood, one newspaper shows the people who did not get help, while the other shows those who were assisted well. The reasons for this are: the viewpoint of the reporter, the choice of words and the policy of the newspaper. Therefore, we should not jump to conclusions about any news; we should find out more and decide with critical thinking.

Exercise A: Multiple Choice Questions — tick the correct answer

What is the process of sending and receiving messages called?

✓ (a) Communication

(b) Advertisement

(c) Television

(d) Radio

Newspapers are a form of which communication?

(a) Personal communication

✓ (b) Mass-Media

(c) Letter writing

(d) Telephone contact

At the time of independence, Pakistan had three radio stations. Which of the following was one of them?

(a) Karachi

✓ (b) Lahore

(c) Islamabad

(d) Quetta

In which year was the first television station of Pakistan established at Lahore?

(a) 1947

✓ (b) 1964

(c) 1970

(d) 1995

Which is the system of millions of interconnected computers around the world?

(a) Radio

✓ (b) Internet

(c) Newspaper

(d) Dish antenna

Exercise B: Answer the following questions

Question: List the various means of information.

Answer: The means of information are: (1) Newspapers — local, national and world news, articles, stories and advertisements; they are published in Urdu, English, Sindhi and other languages. (2) Radio — news, education and entertainment; invented by Guglielmo Marconi in 1895. (3) Television — news, documentaries and dramas; started in Pakistan in 1964. (4) Internet — the system of interconnected millions of computers, a huge storehouse of information on all subjects. All these means are mass media.

Question: Describe the importance of the means of information.

Answer: The means of information keep the people informed of the events in the country and the world. Newspapers, radio, television and the internet also give education and entertainment. Through them, the policies of the government, the weather news, information about elections and advertisements of new products reach the people. Because of the media, people can form their own opinions and attention can be drawn to wrongdoings. In the modern age, life cannot be imagined without these means.

Question: Differentiate between mass-media and non mass-media.

Answer: Mass media is the communication which reaches a large number of people at the same time, for example newspapers, radio, television and the internet. Non mass-media (personal communication) is with a few people, for example talking on the telephone, writing letters, SMS and e-mail to family and friends. The purpose of mass media is to inform the general public, while personal communication is for talking to specific people.

Question: What is the purpose of advertisements?

Answer: The purpose of advertisements is to draw the attention of the people to the products and services for sale, so that people buy them. Through advertisements, information about job vacancies and admissions

in educational institutions is also given. Advertisements are the main source of income for newspapers, radio, television and the internet. Remember that advertisements are usually biased: they only tell the good things about the product.

Question: What is the role of the media in the political process?

Answer: In a democracy, the free flow of information, ideas and opinions is critical, and the media does this work. The media gives correct and unbiased information about political persons, events and institutions and creates healthy debate through the exchange of ideas. At election time, the media tells who is standing, which is his party and what the past role and aims of his party are, and it facilitates communication between the candidates and the voters. The media acts as a "watchdog" on the three branches of government (legislature, executive, judiciary) and exposes corruption and the misuse and abuse of power.

Question: Which is the most important means of information today? Give three reasons.

Answer: Today the most important means of information is the Internet. Reasons: (1) Through it, the news of any event in the world is received in a few seconds. (2) Newspapers, radio and television are all available on the internet; information on every subject is found at one place. (3) It is two-way communication — a person can not only read the news but also give his opinion and ask questions. However, care is necessary, because on the internet there is also the danger of fake information and hacking.

Exercise C: Complete the table

Question: In a table, write two advantages and two disadvantages of each means of information: Newspaper, Radio, Television, Internet.

Answer: Newspaper — Advantages: it is cheap, detailed news and articles

can be read and a record remains; Disadvantages: the news is received a day late, an illiterate person cannot read it. Radio — Advantages: it is cheap and can be listened to anywhere on a battery, illiterate people can also benefit; Disadvantages: pictures cannot be seen, programmes come at fixed times. Television — Advantages: pictures and live events can be seen along with sound, both education and entertainment are received; Disadvantages: watching too much spoils the eyes and health and studies are affected. Internet — Advantages: instant information on every subject, two-way communication; Disadvantages: fake information, hacking and loss of time by excessive use.

Exercise D: Practical work

Question: Practical work: Choose an advertisement and answer these questions: What is the name of the product? Describe the advertisement (people, ages, dress, written text). Who do the advertisers want to sell to? How was it made appealing? Is both positive and negative information given? Is what the advertisers say true? What information would make it true? (Model: a soap advertisement)

Answer: (Model) Product: a beauty soap. Advertisement: a famous actress is seen wearing neat and clean clothes and it is written "Fair colour in just seven days". The advertisers want to sell this soap to women and girls. To make it appealing, a famous actress was shown so that people want to become like her. Only positive information is given in the advertisement, not negative. What the advertisers say is not fully true, because a soap only helps to stay clean; making the colour fair is not its work. To make it true, the advertisement should say that this soap only cleans the skin and keeps the face fresh; giving only positive or only negative information is biased.

Question: Practical work: Read two newspaper articles or watch the TV news and identify the point of view presented in each.

Answer: While reading the news, notice: Which words have been used? The views of which people have been given and of which people not? For example, in the news of a protest, one channel calls the protesters "peaceful citizens" and another calls them "rioters" — this is a difference of viewpoint. Write the main words of both news reports in your notebook and tell which side each news report is on. A good reader reads the news of both sides and then forms his own opinion.

Question: Practical work: Read about the same event in an Urdu newspaper and an English newspaper and identify the point of view in each.

Answer: The readers of Urdu and English newspapers are different, so the details and the emphasis of the same event can be different. Read both news reports and note the sentences in which an opinion is given, for example words like "unfortunately" or "fortunately". Then write which newspaper showed which side more and why. Also see where the reporter has mixed his own opinion in the news, because a good news report should contain only facts.

Question: Practical work: In small groups, create a public service message on environmental pollution for radio, TV or the internet and share it.

Answer: (Model message) "Listen, listen! Our city, our responsibility. Do not throw trash on the road; put it in the dustbin. A dirty environment spreads diseases and spoils the water and the air. Use fewer plastic bags, plant trees and save water. If we all take care of cleanliness from today, our city will become clean, green and healthy. Cleanliness is half of faith!" Read this message aloud in the class and also put it on the school board.

Question: Practical work: Prepare a questionnaire: what is the most

popular and the least popular TV programme in your school? Conduct the survey and present the data as a table or a graph.

Answer: Put these questions in the questionnaire: Which TV programme do you watch the most? Why? Which programme do you watch the least? Why? Then take answers from at least 30 students. The programme named by the most students is the most popular, and the one named by the fewest is the least popular. Write the data in a table and make a bar graph and present it to the class. From the survey it will be known that children like sports and cartoon programmes more.

Exercise E: Extension activity

Question: Extension activity: Divide the class into eight groups — half design positive advertisements and half negative ones (Eating Burgers, Visiting the Zoo, Cleaning the school as good citizens, Soap). Then combine pairs of groups to make a fair advertisement.

Answer: For example, for burgers: the positive group will say that burgers are tasty and are available quickly; the negative group will say that eating too many burgers spoils the health and home food is cheaper and better. When both groups combine, the fair advertisement will be like this: "Eat a burger sometimes and enjoy it, but do not eat it daily; balanced food is the best for health." In the same way, make fair advertisements for the zoo, cleaning the school and soap too, in which both sides are given, because showing only one side is biased.

Question: Extension activity: Visit a nearby radio or television station to see how it operates.

Answer: With the permission and guidance of your teacher, visit a radio or TV station. See there: how the news is collected, how recording is done in the studio, how a programme is broadcast from the control room, and how

many people together make one programme. Ask questions from the staff and make notes. On returning, tell the class what you saw and learnt. From this visit you will know that behind every news report and programme that reaches us, there is the hard work of many people.

Our Values, Our Behaviour

Activities (given in the chapter)

Question: Activity: List three values that all your family members share and three values that you and your friends have in common.

Answer: (Model) Values shared in the family: (1) Honesty — never telling a lie; (2) Respect for the elders — saying salaam and listening to them; (3) Punctuality — doing every work on time. Values shared with friends: (1) Truthfulness — speaking the truth to each other; (2) Helping each other — not leaving anyone alone in difficulty; (3) Fair play — not cheating in a game. These values make our behaviour good.

Question: Activity: From the given values (Achievement, Care for the environment, Cleanliness, Education, Fairness, Family, Forgiveness, Health, Honesty, Perseverance, Respect for others), identify seven values important to you and say who influenced each; then tell: Who had the most influence on your values? Whose advice do you follow most — parents, teachers or friends? Why?

Answer: (Model) My seven important values: Honesty (family and religion), Respect for others (family and school), Cleanliness (school and family), Education (teachers and parents), Fairness (religion and school), Perseverance (parents), Care for the environment (school and media). My family had the most influence on my values, because I have lived with them since birth and I learn by watching them. I follow the advice of my parents the most, because they want my betterment and they have the experience of life; the advice of teachers is also important about education.

Exercise A: Answer the following questions

Question: What are the factors that influence our values? Give examples of how family and school influence them.

Answer: The factors that influence our values are: family, school, friends, religion, society and media. Influence of family: the family influences the most; it teaches us right and wrong, and from birth our role models are the family members. For example, if respect for others is taught at home, the child will also respect others, and if conflicts at home are solved by arguing and fighting, the child may think that is alright. Influence of school: coming to school on time, staying neat and clean, waiting for your turn and doing work well create the values of punctuality, cleanliness, respect for others and hard work; group work gives collaboration and competitions give the spirit of competition.

Question: List five values that are important to you, and for one of them identify three behaviours that show it.

Answer: My five important values: Honesty, Respect for others, Punctuality, Cleanliness and Helping others. Value: Honesty — three behaviours: (1) If the shopkeeper gives me extra change by mistake, I return it. (2) In tests and classwork I do my own work; I do not copy. (3) If I make a mistake, I admit it and do not tell a lie. In this way, our behaviours show what our values are.

Question: For the following statements write Fair or Not Fair, and rewrite the Not Fair ones to make them fair: (a) Everyone passes the football around but not to the weakest player. (b) You allow someone to cut in line in front of you. (c) You wash the dishes and your brother or sister dries them. (d) Your brother shares his toys with you and then you make him pick them up all by himself. (e) You change the rules in the middle of the game because your team is losing. (f) You find some money in class; you

ask whose it is and give it to him/her. (g) You can't find your pencil and your classmate has an extra one that looks just like yours, so you take it.

Answer: (a) Not Fair — Fair statement: Everyone passes the ball to all the players, including the weakest player, so that everyone gets a fair chance to play. (b) Not Fair — Fair statement: Everyone waits for his/her turn in the line; no one is allowed to cut in. (c) Fair — the work is shared: one washes and the other dries. (d) Not Fair — Fair statement: You help your brother pick up the toys that you both played with. (e) Not Fair — Fair statement: The rules fixed at the start are followed by both teams till the end of the game. (f) Fair — returning the money to its owner is honesty and fairness. (g) Not Fair — Fair statement: You ask your classmate's permission before taking the extra pencil, or you ask the teacher for a pencil.

Question: Saleem is very good at cricket but makes negative comments about the other children, so the children voted for Ali as captain and the teacher explained that he is not showing respect for others' feelings. For each statement write Respectful or Disrespectful: 1. "Can't you figure out how to hold the bat?" 2. "Would you like my help? I can show you a good way to hold the bat." 3. "What's taking you so long to hit the ball?" 4. "That's the dumbest move I ever saw." 5. "Maybe I can show you how to help your partner." 6. "Would you mind if I made a suggestion?" 7. "Can't you remember anything I teach you?"

Answer: 1. Disrespectful — it makes fun of the partner. 2. Respectful — help is offered politely. 3. Disrespectful — it is a taunt and embarrasses the partner. 4. Disrespectful — it insults the partner's effort. 5. Respectful — it offers help for improvement. 6. Respectful — taking permission before giving a suggestion is respect. 7. Disrespectful — it is scolding and taunting. Lesson: a good player is one who respects his partners and encourages them, and does not show them as low.

Exercise B: Complete the table

Question: Make a table: three values learnt in school and three behaviours for each value.

Answer: 1. Punctuality — Behaviours: reaching school on time; submitting homework on time; reaching the playground at the fixed time. 2. Cleanliness — Behaviours: keeping the uniform neat and clean; throwing litter in the dustbin; washing hands before eating. 3. Hard Work — Behaviours: preparing lessons daily; revising before tests; completing tasks myself without copying. The school teaches us all three values through daily habits.

Exercise C: Practical work

Question: Practical work: Write the ways to show the value "care for the environment" and demonstrate it by doing one of them.

Answer: Ways: (1) Plant a tree and look after it. (2) Keep the school and classroom clean and throw litter in the dustbin. (3) Do not waste water and electricity; turn off the tap and the bulb when not needed. (4) Reuse paper and old things. Practical work (Model): I planted a sapling in my school garden, I water it daily and I also asked my friends to plant trees. In this way the value did not remain only a thought, but became a behaviour.

Exercise D: Extension activity

Question: Extension activity: If people did not have values, what differences would be visible in day-to-day life?

Answer: If people did not have values, life would become difficult and unsafe: without honesty there would be cheating and stealing everywhere and no one would trust anyone. Without respect there would be quarrels on every matter and the elders and teachers would have no honour. Without punctuality and cleanliness there would be disorder and dirt

everywhere. Without fairness the strong would snatch the rights of the weak. Therefore, values alone make society peaceful, safe and worth living in.

The System of Government in Pakistan

Activities (given in the chapter)

Question: Activity: What are the legislative bodies called in the USA, England and India?

Answer: In the USA the legislative body is called the Congress. In England it is called the Parliament. In India it is called the Parliament or Sansad. In Pakistan too the law-making body is the Parliament, which has two houses: the National Assembly (Lower House) and the Senate (Upper House).

Question: Activity: With the help of the table in the book, complete the table of the seats of the National Assembly.

Answer: Province — General seats, Women seats, Total: Punjab — 148, 35, 183; Sindh — 61, 14, 75; Khyber Pakhtunkhwa — 35, 8, 43; Balochistan — 14, 3, 17; FATA — 12, 0, 12; Islamabad — 2, 0, 2. Total general seats 272, women seats 60, total 332; minorities seats 10; grand total 342. In this way the National Assembly has 342 members (MNAs) in total.

Question: Activity: Conduct a mock session in the class of passing a bill into law.

Answer: In the class, some students become MNAs, one becomes the Speaker and one the Prime Minister. One student presents a bill, for example the "Planting Trees in Schools Bill". The Speaker conducts the debate: some students speak in favour of the bill and some against it. Then voting is held; if the majority is in favour, the bill is passed and the "President" signs it, and it becomes a law. From this activity you will learn how a law is made in the real Parliament.

Question: Activity: Find out the names of the Chairman and the Deputy

Chairman of the Senate.

Answer: These offices can change after the time of the writing of the book, so always check from a current newspaper. (As of 2026) the Chairman of the Senate is Syed Yousaf Raza Gilani and the Deputy Chairman is Syedaal Khan Nasar. The Chairman conducts the proceedings of the Senate, and in his absence the Deputy Chairman does this work.

Question: Activity: Write a paragraph on why it is important for justice to be blind.

Answer: Justice is called blind because the courts do not see a person's wealth, power or status; they see only the facts and the law. If a judge favours a rich or powerful person, the poor will not get justice and the people will lose their trust in the courts. Blind justice means equal treatment for everyone — punishment for the guilty and protection for the innocent, without any fear or greed. Only through such justice does peace remain in society.

Exercise A: Multiple Choice Questions — tick the correct answer

How many branches of government are there?

(a) Two

✓ (b) Three

(c) Four

(d) Five

What is another name for the Senate?

(a) Lower House

✓ (b) Upper House

(c) Cabinet

(d) High Court

What is the minimum age to become a parliamentarian?

✓ (a) 25 years

(b) 18 years

(c) 21 years

(d) 30 years

How many High Courts are there in Pakistan?

(a) Four

✓ (b) Five

(c) Three

(d) Six

What is the function of the National Assembly?

(a) To enforce the laws

(b) To interpret the laws

✓ (c) Make the laws

(d) To collect taxes

Exercise B: Answer the following questions

Question: What is a constitution? Why is it important for a country?

Answer: The Constitution is the most important law of the country. It outlines the structure of the government, defines the powers and limits of each branch, defines the relationship between the federal and provincial governments and lists the rights and duties of the citizens and protects the rights of all citizens. It is important because without it the government could act as it pleased and the rights of the people could not remain safe. The present Constitution of Pakistan is of 1973.

Question: Describe the main features of a federal system of government.

Answer: In a federal system, power is shared between the federal and provincial governments. The federal government has powers like foreign policy, defence and finance, while the provincial governments have

powers like education, health, law and order and development. The federal government prepares the annual budget and development programs. If there is a dispute between the federation and the provinces, the Supreme Court decides by interpreting the law. The benefit of this system is that the unity of the country is maintained and the provinces can solve their local problems themselves.

Question: Name three political parties and their current leaders.

Answer: (These names can change with time; check from a current newspaper.) (1) Pakistan Muslim League (N) — leader Mian Muhammad Nawaz Sharif. (2) Pakistan Peoples Party — Chairman Bilawal Bhutto Zardari. (3) Pakistan Tehreek-e-Insaf — leader/founder Imran Khan. Political parties encourage citizens to join them and choose candidates from their members to stand for elections.

Question: What is the role of political parties in a democratic country?

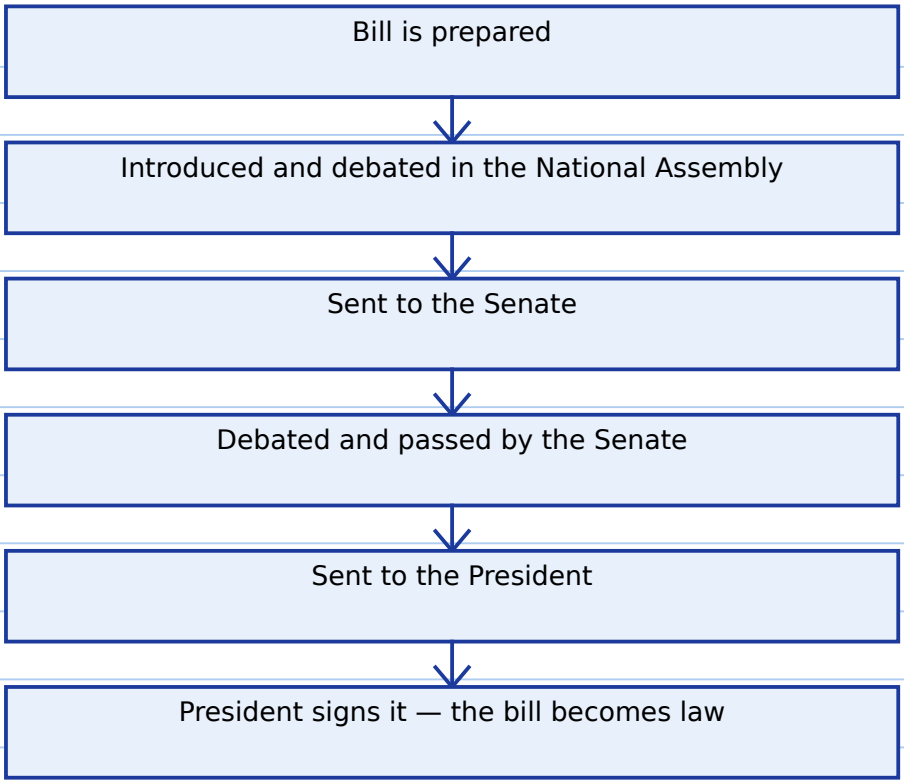

Answer: Political parties are organized groups of people who want to do something for the welfare of the country. Their functions are: (1) To speak on behalf of and do things for the people they serve. (2) To educate the people and mobilize public opinion towards the solutions of their problems. (3) In opposition, to keep a close watch on the ruling party that it follows right policies and actions. (4) To help in public management at the time of a crisis, for example a war. (5) To promote national integrity — bringing together people of different regions, ethnicities, religions and gender on a common platform.

Question: Describe the steps in the law-making process in Pakistan.

Answer: (1) The bill is prepared. (2) The bill is introduced in the National Assembly. (3) It is reviewed by the rules committee. (4) It is examined by a standing committee. (5) It is debated on the floor of the National Assembly. (6) The bill is voted on; if it passes, (7) it is sent to the Senate.

(8) It is examined by a standing committee of the Senate. (9) It is debated on the floor of the Senate. (10) The bill is voted on; if it passes, (11) it is sent to the President. (12) If the President signs it, the bill becomes law. The flow diagram is given below.

How a Bill Becomes a Law

Question: What is the relationship between the federal and provincial governments?

Answer: The Constitution calls for the sharing of power between the federal and provincial governments. The federal government looks after foreign policy, defence and finance and prepares the annual budget; the provincial governments look after education, health and law and order. In shared areas the federal government can make national policies, but it interferes less in the administration of the provinces. Both governments work together for the good of the country. If there is a dispute, the Supreme Court decides by interpreting the Constitution, which is binding

on all.

Question: What is the authority of the Supreme Court over the High Courts?

Answer: The Supreme Court is the highest court of the country and its decision is final, which is binding on all courts and institutions. Appeals against the decisions of the High Courts are heard in the Supreme Court, and it can uphold or change those decisions. Special benches of the Supreme Court also sit at all the provincial headquarters. It also settles disputes between the federation and the provinces. In this way the High Courts are under the Supreme Court and it is necessary for them to obey its decisions.

Question: What is the law and order situation in Pakistan? Give three suggestions to improve it.

Answer: In some areas of Pakistan the law and order situation is not good: incidents of theft, robbery and sometimes violence take place, due to which people feel unsafe. Suggestions: (1) The police should be made honest, trained and equipped with modern facilities so that criminals are caught quickly. (2) Cases in the courts should be decided quickly, because delayed justice is also injustice. (3) Education and employment for the youth should be increased so that they do not turn to crime; along with this, citizens should also obey the law and report crimes to the police.

Question: Name the three branches of the federal government, give the work of each, and compare them with the provincial government.

Answer: The three branches of the federal government are: (1) The legislative (Parliament): makes and changes laws and passes the budget. (2) The executive (President, Prime Minister, cabinet and civil service): enforces the laws and runs the administration of the country. (3) The judiciary (Supreme Court and High Courts): interprets the laws and

provides justice. At the provincial level there are the same three branches: the Provincial Assembly makes laws, the Governor, Chief Minister and provincial cabinet run the administration, and the High Court provides justice. The only difference is that the federation works for the whole country and the provinces work for their own province.

Question: How are MNAs elected?

Answer: Political parties nominate candidates to stand in different constituencies. On the election day, the citizens of every constituency vote for the candidate of their choice. The candidate who gets the largest number of votes is elected as the MNA from that constituency. The term of an MNA is five years. The party whose most MNAs are elected forms the government and its leader becomes the Prime Minister; the other parties form the opposition.

Question: What is the role of citizens in a democracy?

Answer: In a democracy, the citizens are the real power. Their role is: to elect good and honest representatives by voting in the elections; to obey the laws of the country and pay taxes; to keep an eye on the work of the government and raise their voice peacefully against wrongdoing; to take part in improving their community. If the citizens play their role honestly, democracy becomes strong and the country becomes developed.

Question: What are Human Rights? How do they differ from legal rights?

Answer: Legal rights are the rights which are guaranteed in the law of a country and are upheld by the judiciary; they can differ from country to country and can change as the laws change. Human rights are the rights held by all people, all over the world, at all times; they are universal. Even if a human right is not your legal right, you still have it. Human rights are defined in the Universal Declaration of Human Rights 1948 and the Convention on the Rights of the Child 1989.

Question: Identify a current issue and find out what the government is doing to solve it. (Model: illiteracy)

Answer: (Model) Issue: many children do not go to school and there is a large number of illiterate people. To solve it the government is: (1) building new government schools and repairing the old ones; (2) giving free textbooks and hiring new teachers; (3) running enrolment campaigns and giving awareness to parents; (4) in some areas, special schools and scholarships are given for girls. Citizens should also send their children to school regularly.

Exercise C: Complete the table

Question: Make a table: Five rights from the Constitution that you think are important | Why they are important | What would happen if citizens did not get this right.

Answer: 1. Right to life and liberty — it is important because without it no other right has any meaning; if not given, people would live in fear and anyone could be harmed unjustly. 2. Freedom to speak and express opinion — it is important so that people can tell their problems; if not given, wrongdoings would remain hidden and the government would not know its mistakes. 3. Equality before the law — it is important so that the rich and the poor are all treated alike; if not given, the powerful would oppress the weak. 4. Freedom of religion — it is important so that everyone can practise his religion; if not given, religious quarrels would increase. 5. Right to property — it is important so that people can work hard and keep their property safe; if not given, no one would be ready to work hard and invest.

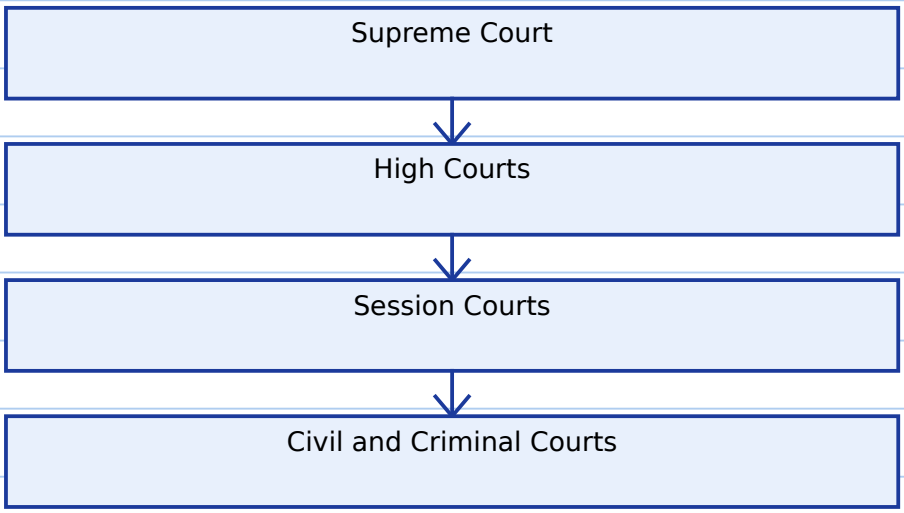

Exercise D: Practical work

Question: Practical work: Make a chart showing the work of each court and

the relationship between the different courts.

Answer: The order of the courts is like this: at the top is the Supreme Court, which is for the whole country and whose decision is final; its work is: to settle disputes between the federation and the provinces, to hear appeals against the decisions of the lower courts and to take notice of cases important to the citizens. Below it are the five High Courts, which hear appeals (review) against the decisions of the district courts. Below them are the district and session courts, which hear civil cases (property, marriage disputes) and criminal cases (murder, armed robbery); in practice, work is done in the civil and criminal courts below the session courts. People first go to the lower court and, if they do not agree with the decision, they appeal to the higher court. The flow diagram is given below.

The Hierarchy of Courts

Question: Practical work: Identify a problem that children face, tell which right they are deprived of, what the government is doing, and write a letter to your MPA. (Model: children out of school)

Answer: (Model) Problem: many children work as labourers or stay at home instead of going to school. Right: the right to education and the right of protection of children, which are given in the Constitution and the

Convention on the Rights of the Child 1989. Work of the government: giving free textbooks, building new schools and running enrolment campaigns; some NGOs and CBOs also teach poor children. Letter (Model): "Respected MPA Sahib, Assalam-o-Alaikum. I am a student of Class 5. In our area many children do not go to school and some children work as labourers at shops. Kindly build one more school in our area and give awareness to the parents, so that every child can get education. Your grateful, (Name, Class 5)."

Question: Practical work: Make a booklet "My Country": on a map outline the federating units with names and capitals, draw and colour the flag, a man, woman and child in national dress, three famous buildings with two sentences each, a ten-rupee note and the drawings on it, two important rights with two responsibilities, and what you like best about being a citizen of Pakistan.

Answer: (Model) Federating units and their capitals: Punjab — Lahore; Sindh — Karachi; Khyber Pakhtunkhwa — Peshawar; Balochistan — Quetta; Islamabad (Federal Capital Territory); Gilgit-Baltistan — Gilgit. Flag: green and white, with a crescent and star in the centre — the green colour shows the Muslim majority and the white shows the minorities. Three famous buildings: (1) Badshahi Mosque, Lahore — built by the Mughal emperor Aurangzeb, it is very large and beautiful. (2) Mazar-e-Quaid, Karachi — it is the tomb of Quaid-i-Azam Muhammad Ali Jinnah. (3) Faisal Mosque, Islamabad — it is one of the largest mosques of Pakistan and its shape is like a tent. Ten-rupee note: on the front is the portrait of the Quaid-i-Azam and on the back is the picture of the Khyber Pass, which shows the historic route. Two important rights and responsibilities: freedom of speech — responsibility: not to hurt anyone's feelings and not to spread lies; right to property — responsibility: not to damage the property of others. What I

like best about being a citizen of Pakistan is that we are free and can love our religion and culture.

Question: Practical work: Make a scrapbook of pictures and articles from newspapers of citizens working to solve people's problems; identify what you can do in your community, do at least one thing, and encourage your classmates to work with you.

Answer: Cut news items from newspapers in which people are helping others, for example a group of young people is cleaning a park, someone is teaching poor children free of cost, or the neighbours together are solving the water problem. Write below each news item what we should learn from it. What I can do for my community: keep my street clean, plant trees, and help the younger children of the neighbourhood in their studies. (Model work) With my friends, I cleaned the trash from the empty plot of our street and planted three saplings there, and encouraged my classmates to do such work too.

Explorers and Explorations

Activities (given in the chapter)

Question: Activity: What motivated explorers in the past? What motivates explorers today?

Answer: In the past, explorers were motivated by these things: (1) Trade — finding new trade partners, routes and goods; (2) Gold — the search for riches and treasure; (3) Science — learning more about nature, new species of animals and plants; (4) Land — claiming new lands in the name of their country; (5) Challenge — the desire to be the first, for example to the Poles and the top of Mount Everest. Today, explorers are motivated by science and knowledge, challenge, and finding new resources and places in space and in the oceans. Exploration continues today.

Question: Activity: Using the map of Marco Polo's travels and a modern world map, name all the places he visited.

Answer: Marco Polo set out from Venice (Italy) in 1271 with his father and uncle. On the way he visited Jerusalem, Persia, the Hindukush mountains and the Gobi Desert, and after three years reached the court of Kublai Khan in China. In China he spent many years, learned the language and travelled throughout China as a messenger and spy for Kublai Khan; he also went far south to where Myanmar and Vietnam are today. After about twenty years, in 1295, he returned to Venice by sea, passing by India.

Question: Activity: On a world map, mark all the places visited by Ibn-e-Battuta.

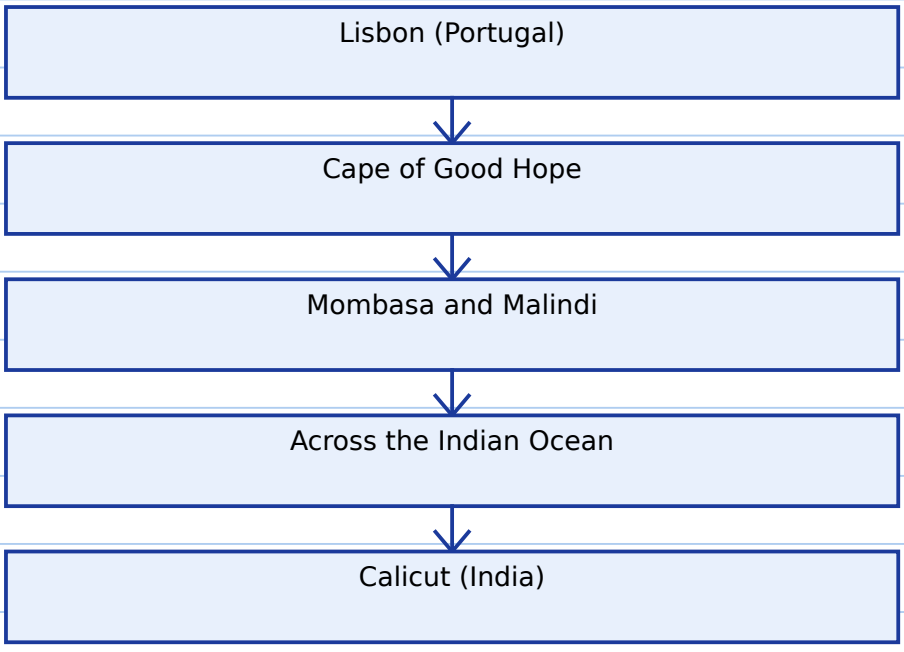

Answer: Ibn-e-Battuta set off from Tangier (Morocco) in 1325 at the age of 21 to perform Hajj. Travelling along the North African coast through Algiers

and Tunis, he reached Egypt, then Syria, Medina and Makkah. After Hajj he continued his journey for 25 years: he visited Persia, Central Asia (Samarkand, Bukhara), Delhi (India), where King Muhammad Tughlaq appointed him a Qadhi (Judge), the Maldives, Southeast Asia and China (Quanzhou). He travelled more than 75,000 miles in total, which was a wonder in those times.

Question: Activity: What was the impact of Vasco da Gama finding a sea route from Europe to India on (a) Europe (b) India?

Answer: (a) Impact on Europe: Europe got a direct sea route for trade with India, so spices and other goods became cheaper and easily available. Portugal became rich and powerful, and later other European countries also followed this route and built huge empires. (b) Impact on India: India's trade with Europe increased, but gradually the European powers began to increase their influence and control in India, which harmed the local rulers and traders with time. The flow figure of his route is given below.

The Route of Vasco da Gama

Exercise A: Multiple Choice Questions — tick the correct answer

Where was Christopher Columbus born?

(a) Portugal

(b) Spain

✓ (c) Italy

(d) France

From Tangier, where did Ibn-e-Battuta want to go?

(a) Delhi

(b) Cairo

✓ (c) Makkah

(d) Baghdad

With whom did Marco Polo travel?

(a) Father only

(b) Uncle only

✓ (c) Father and Uncle

(d) His brothers

Which ocean did Columbus cross?

(a) Pacific

✓ (b) Atlantic

(c) Indian

(d) Arctic

How many voyages did Vasco da Gama make to India?

(a) One

(b) Two

✓ (c) Three

(d) Four

Exercise B: Answer the following questions

Question: Name three explorers and explain the reason for their explorations.

Answer: (1) Marco Polo — Reason: his father and uncle were merchants; he went with them to bring goods directly from China and to see the new world. (2) Christopher Columbus — Reason: he thought that by crossing the Atlantic he would find a shorter route to the riches of China and East Asia; trade and wealth were his aims. (3) Vasco da Gama — Reason: the King of Portugal sent him to find a sea trade route to India around Africa, because the overland route for spices was long and expensive.

Question: What were the effects of Columbus's voyages to the Americas?

Answer: Columbus's voyages started the age of European exploration and colonization of the Americas. New foods, plants and animals were exchanged between Europe and America; for example, Columbus took turkeys and pineapples to Europe. Spain became rich and powerful and got gold and silver. But the original inhabitants of America (Native Americans) suffered greatly: their lands were taken, they were treated cruelly, and many died from diseases brought from Europe. Columbus himself kept thinking till the end that he had discovered a route to Asia.

Question: What will be the future areas of exploration and what changes would result from them?

Answer: The future areas of exploration are: (1) Space — the Moon, Mars and beyond, the search for new planets; (2) The deep oceans — their depths and the creatures living in them; (3) Exploration of the poles and difficult regions; (4) Sources of new energy and medicines. Possible changes: new technology will come, people may start living on the Moon or Mars, new resources will be found and our knowledge about the Earth and the universe will increase greatly. In this way the process of exploration never stops.

Question: Select any explorer and explain his/her successes and challenges. (Model: Vasco da Gama)

Answer: (Model) Successes: Vasco da Gama was the first European to find a sea route from Europe to India around Africa. He left Lisbon on 8 July 1497 with 170 men and 4 ships, rounded the Cape of Good Hope on 22 November, passed Mombasa and Malindi, and with the help of a local navigator and a monsoon wind crossed the Indian Ocean and arrived in Calicut (India) in less than a month. On returning home he was given a hero's welcome. Challenges: many people doubted whether the Indian Ocean was connected with the Atlantic; the voyage was long and dangerous; on the way back about half the crew died of scurvy. Despite these challenges, he succeeded in his aim.

Exercise C: Complete the table

Question: Complete the table for the following explorers: Country they belonged to | What work they did | What motivated them | What challenges they faced | Result of their exploration — Marco Polo, Ibn-e-Battuta, Christopher Columbus, Vasco da Gama, Neil Armstrong.

Answer: Marco Polo — Country: Italy (Venice); Work: merchant and traveller; Motivation: trade and the desire to see the new world; Challenges: a long and difficult journey over land, and he also had to spend time in prison at the end; Result: his book "The Travels of Marco Polo" gave Europe information about China. Ibn-e-Battuta — Country: Morocco; Work: traveller and a jurist of Islamic Fiqh (Qadhi); Motivation: Hajj, knowledge and the desire to see the world; Challenges: long and dangerous journeys of 25 years; Result: he travelled more than 75,000 miles and left a great account of the world of his times. Christopher Columbus — Country: Italy, voyage financed by Spain; Work: sailor and

explorer; Motivation: a shorter route to China and wealth; Challenges: a long sea voyage and the danger of mutiny by the crew; Result: he reached America and the age of its exploration and colonization began. Vasco da Gama — Country: Portugal; Work: commander of ships and explorer; Motivation: finding a sea trade route to India; Challenges: unknown seas and the disease of scurvy; Result: the age of direct trade between Europe and India began. Neil Armstrong — Country: USA; Work: astronaut; Motivation: science, challenge and service to the country; Challenges: harsh training and the dangers of space; Result: on 21 July 1969 he became the first person to walk on the Moon.

Exercise D: Practical work

Question: Practical work: Trace the route of one explorer on a world map. (Model: Vasco da Gama)

Answer: (Model) Draw the route of Vasco da Gama on the map in this order: start from Lisbon (Portugal), go down along the west coast of Africa, round the Cape of Good Hope, then go up along the east coast to Mombasa and Malindi, and from there cross the Indian Ocean to reach Calicut (India). Write the name of each place and show the direction of the journey with arrows. This route is also given in flow form in the activities of this chapter.

Question: Practical work: Imagine you are a reporter: write the story of any explorer — his/her adventures, difficulties and successes. (Model: Samina Khayal Baig)

Answer: (Model news story) "The brave daughter of Hunza steps on the roof of the world — Samina Khayal Baig has become the first Pakistani woman to climb Mount Everest (8,848 metres), the highest peak of the Himalayas. She was born on 19 September 1990 in Shimshal Village

(Gilgit-Baltistan) and began climbing at the age of 4; from the age of 15 she was trained by her brother Mirza Ali. In 2010 she was the first to climb the peak Chashkin Sar (above 6,000 metres), which was later renamed Samina Peak after her. On 1 April 2013 she started climbing the south face of Mount Everest, and after 48 days of hard work, snowstorms and cold, she reached the summit on 19 May 2013. After this she also climbed the highest mountains of all the seven continents (the Seven Summits). Her success is a message of courage and hope for every girl of Pakistan."

Exercise E: Extension activity

Question: Extension activity: Find out about an explorer of your choice and write an article on him/her to share with your class. (Model: Sir Edmund Hillary)

Answer: (Model article) Sir Edmund Hillary was a famous mountain climber of New Zealand, born on 20 July 1919 in Auckland. He became interested in climbing at the age of 16 and climbed his first major mountain at 20. In 1953 the British team received approval to attempt Mount Everest; the team had over 400 members and they climbed in stages to higher camps. The first team (Bourdillon and Evans) turned back just 300 feet from the top. Then Hillary and his Sherpa partner Tenzing Norgay made their attempt; crossing a 40-foot rock wall, now called "Hillary's Step", they reached the highest peak of the world in 1953 — becoming the first persons to do so. Due to the thin air they stayed there for only a few minutes. His courage proves that with hard work and determination any great aim can be achieved.
