Grade 9 Pakistan Studies

Solved Exercises - English Medium - Balochistan Textbook Board (BTBB)

Complete book: all 9 chapters, every Assessment (multiple choice, brief and detailed questions) plus the chapter Skills activities.

Chapter 1: Ideological Basis of Pakistan

Chapter 2: Establishment of Pakistan

Chapter 3: Land of Pakistan

Chapter 4: The Natural Topography and Vegetation of Pakistan

Chapter 5: Climate of Pakistan and Environmental Hazards

Chapter 6: Water Resources

Chapter 7: Population Structure and Growth

Chapter 8: Agriculture, Livestock and Fisheries

Chapter 9: Transport And Trade

Source: BTBB Grade 9 Pakistan Studies textbook (National Curriculum 2022-23, Pilot Edition 2026), 143 pages. Medium confirmed from the book itself: cover, Table of Contents and all chapters are in English (the garbled Urdu characters in an early text extraction came from front-matter ornaments, not from the lessons). Assessments were read from rendered pages: Ch.1 book pp.14-15, Ch.2 pp.35-36, Ch.3 pp.44-45, Ch.4 pp.61-62, Ch.5 pp.81-82, Ch.6 pp.94-95, Ch.7 pp.108-109, Ch.8 pp.124-125, Ch.9 pp.139-140. Questions are reproduced from each chapter Assessment; answers are written in medium length. Skills activities are activity prompts, so each carries a short approach note rather than a single factual answer.

Chapter 1: Ideological Basis of Pakistan

Assessment 1

A. Multiple choice questions. (Correct option marked with a green tick.)

(1) The ideology of Pakistan is based on:

(a) Asian values

(b) Islamic values ✓

(c) socialism

(d) nationalism

(2) During the British rule, the Muslims encountered hardships because of:

(a) their leaders

(b) lack of Islamic knowledge

(c) colonial policies ✓

(d) Hindus and Sikhs

(3) The educational policies of the British administration discouraged:

(a) Urdu

(b) English

(c) Urdu and English, Arabic and Persian ✓

(d) cultural problem

(4) About the minorities, Quaid-e-Azam believed that they would:

(a) follow all the tenets of Islam

(b) live their life as a second grade citizen

(c) spend their lives as per their own beliefs ✓

(d) be asked to leave the country

(5) The idea of a Separate State was presented by Allama Muhammad Iqbal in his address at:

(a) Lucknow

(b) Lahore

(c) Allahabad ✓

(d) Dhaka

(6) Allama Muhammad Iqbal believed that more than economic problem, the bigger problem for the Muslims of India was:

(a) education problem

(b) language problem

(c) jobs problem

(d) cultural problem ✓

(7) The system of governance and control that the British established over

various territories and countries is called:

(a) communalism

(b) colonialism ✓

(c) regionalism

(d) unionism

(8) The primary goal of colonialism was:

(a) to encourage self-determination among the colonized population

(b) to promote cultural diversity and tolerance in colonized territories

(c) to control and profit from the resources of the colonized region ✓

(d) to improve the economic and social conditions of the colonized people

(9) The aim of the Muhammadan Anglo-Oriental College was:

(a) focus on education related to skills and professions

(b) integration of Western educational principles with Islamic studies ✓

(c) integration of eastern educational principles with Islamic studies

(d) amalgamation of science & technology and local art and culture

(10) The concept of Muslims as a distinct political and cultural entity became the base for:

(a) Two Nations Theory ✓

(b) suppression of the Muslims

(c) Indian National Congress

(d) Quaid's joining Muslim League

B. Answer the following questions briefly.

(i) Define ideology.

Ideology is a set of beliefs, values and ideas that guides a group of people in their social, political and economic life. It gives them a common identity and a common aim, and it shapes the laws and institutions of their state.

(ii) What is the relation between the ideology of Pakistan and economic and social deprivation of Muslims of India?

The Muslims of India were backward in education, jobs and trade under British rule, while the Hindus advanced faster. This economic and social deprivation convinced Muslim leaders that Muslims needed a separate state where their rights, culture and economic interests would be protected.

(iii) What do you think was the role of Allama Muhammad Iqbal in formation of the ideology of Pakistan?

Iqbal gave the ideology of Pakistan its philosophical base by presenting the idea of a separate Muslim state in his Allahabad address of 1930. He argued that Islam is a complete way of life, so Muslims needed a state where they could live according to Islam.

(iv) Enumerate the negative effects of the British colonialism on India.

British colonialism drained India's wealth, ruined local industries and crafts, and made the economy dependent on Britain. It created communal divisions, spread English education that neglected local languages, and left the Muslims of India educationally and economically backward.

(v) Why was the Muhammadan Anglo Oriental College formed?

Sir Syed Ahmed Khan founded the college at Aligarh in 1875 so that Muslims could get modern Western education along with Islamic learning. He believed that only modern education could remove Muslim backwardness and help them compete for jobs and progress.

C. Answer the following questions in detail.

(i) Relate the basis for Ideology of Pakistan to the basic values of Islam.

The ideology of Pakistan rests on the Islamic values of Tauheed, justice, equality, brotherhood and the rule of law. Islam gives a complete code of life, covering worship, morality, economy and government, so a state founded on it must protect these values. That is why Pakistan was demanded as a homeland where Muslims could live by Islamic principles, with equal rights and dignity for all citizens.

(ii) Assess Pakistan's ideology with reference to the statements of Quaid Azam.

Quaid-e-Azam repeatedly said that Pakistan was created for Muslims to live according to Islam, but that minorities would be free to follow their own religions. His address of 11 August 1947 promised equal citizenship and protection of life, property and worship for every Pakistani. His statements therefore present Pakistan's ideology as Islamic in its values and democratic and just in its treatment of all citizens.

(iii) What is the role of Islam in Pakistan's identity and governance?

Islam gives Pakistan its identity, because the country was created in the name of Islam and its people share Islamic faith, culture and values. In governance, Islam provides the principles of justice, consultation, equality and accountability that the Constitution reflects. At the same time, the state protects the rights of non-Muslim citizens to practise their own faiths.

(iv) How did British colonialism impact various aspects of life in the Indo-Pakistan subcontinent?

Colonialism changed the economy by destroying local industries, imposing heavy taxes and turning India into a supplier of raw materials. It changed society by spreading Western education and new laws, while creating communal rivalry through policies such as separate electorates. Politically it united Indians in a freedom struggle, but it also left poverty, illiteracy and communal division behind.

(v) Evaluate the role of Aligarh Movement in the success of the Pakistan Movement.

The Aligarh Movement, led by Sir Syed Ahmed Khan, awakened the Muslims of India

through modern education at Aligarh and through political awareness. It taught Muslims to compete in the modern world without giving up Islam, and it produced educated leaders who later led the Pakistan Movement. By demanding separate electorates and safeguards for Muslims, it laid the political groundwork for the demand for Pakistan.

D. Skills / extension activities (activity prompts with an approach note).

(i) History Skills: Find the primary and secondary sources to learn more about Quaid's vision of the ideology of Pakistan.

Approach: use primary sources such as Quaid-e-Azam's speeches and the Lahore Resolution, and secondary sources such as reliable history books and articles, then compare what both say about his vision.

(ii) Investigating: Undertake internet research and find out how can the ideology of Pakistan be made a cornerstone of all the policies of Pakistan.

Approach: research how Islamic values of justice, equality and welfare can be reflected in education, economic and foreign policies, and note examples from the Constitution and national policy documents.

(iii) Change and Continuity: How has the ideology of Pakistan been preserved and what changes occurred in the last few decades? Write an article to show your understanding.

Approach: write an article showing that the Islamic identity and the Two-Nation Theory remain the basis of the state, while democratic practice, media and economic policy have changed with time.

Chapter 2: Establishment of Pakistan

Assessment 2

A. Multiple choice questions. (Correct option marked with a green tick.)

(1) Simla Deputation was a group of Muslim leaders, that convened a meeting with:

(a) Lord Birkenhead

(b) Lord Minto ✓

(c) Lord Wavell

(d) Sir Stafford Cripps

(2) Morley-Minto Reforms are formally known as:

(a) Simla Act

(b) Simon Act

(c) Independence Act

(d) Indian Councils Act ✓

(3) The Swadeshi Movement of the Hindus originated as a protest against:

(a) partition of Bengal ✓

(b) annulment of partition of Bengal

(c) Khilafat movement

(d) Lucknow Pact

(4) An important moment of Hindu-Muslim unity during the Pakistan Movement was:

(a) Khilafat Movement ✓

(b) Swadeshi Movement

(c) Direct Action Day

(d) Civil Disobedience

(5) The Congress accepted the separate electorates for Muslims and one-third representation of the Muslims in the central council in:

(a) Rowlatt Act

(b) Simon Commission Report

(c) Nehru Report

(d) Lucknow Pact ✓

(6) Jallianwala Bagh massacre happened on April 13, 1919, in:

(a) Jalandhar

(b) Amritsar ✓

(c) Delhi

(d) Sialkot

(7) The fourteen points of Quaid-e-Azam were presented as a response to:

(a) Simon Commission Report

(b) Nehru Report ✓

(c) Lucknow Pact

(d) Khilafat Movement

(8) The Civil Disobedience Movement was started by Congress in response to:

(a) Lucknow Pact

(b) Quaid's 14 points

(c) Simon Commission Report ✓

(d) Rowlatt Act

(9) Muslims observed the Day of Deliverance (Youm-e-Nijat) on December 22, 1939 when:

(a) Congress Ministries resigned ✓

(b) 1935 Act enacted

(c) Lucknow Pact was signed

(d) Lahore Resolution was passed

(10) In 1945-46 elections, out of 30 Muslim reserved seats, the Muslim League won:

(a) 20 seats

(b) 25 seats

(c) 30 seats ✓

(d) 35 seats

B. Answer the following questions briefly.

(i) Describe the three most significant demands of the Simla deputation.

The Simla Deputation of 1906 demanded separate electorates for Muslims, so that Muslims could elect their own representatives. It demanded representation in government services and councils in proportion to Muslim importance, and safeguards for Muslim rights in education and employment.

(ii) What was the most important provision of the Minto-Morley Reforms?

The most important provision of the Minto-Morley Reforms of 1909 was the grant of separate electorates to Muslims. For the first time, Muslims voted separately for their own candidates, which recognised them as a separate political community in India.

(iii) Analyse the Importance of Quaid-e-Azam's Fourteen (14) Points.

The Fourteen Points of 1929 protected Muslim rights by demanding separate electorates, one-third Muslim representation in the central legislature, and provincial autonomy. They became the Muslim League's charter and the basis of all later negotiations, because they clearly stated the minimum Muslim demands.

(iv) Why was Allama Muhammad Iqbal's Allahabad address of 1930 a milestone in

Pakistan Movement?

In his Allahabad address, Iqbal clearly proposed a separate state for the Muslims of north-western India. This turned the idea of Muslim nationhood into a definite political goal and gave the Pakistan Movement its direction and destination.

(v) Why the elections 1945-46 were very important?

The 1945-46 elections were important because the Muslim League won almost all Muslim seats, proving that it alone represented the Muslims of India. This victory gave the League the mandate to demand Pakistan and forced the British and Congress to accept the demand.

(vi) Enumerate the salient features of Indian Independence Act.

The Indian Independence Act of 1947 ended British rule and created two independent dominions, Pakistan and India, on 14 and 15 August 1947. It gave both states the right to frame their own constitutions, divided the armed forces and assets, and ended British paramountcy over the princely states.

(vii) Name some important leaders who belonged to minorities.

Important minority leaders in the Pakistan Movement included Jogendra Nath Mandal, a scheduled-caste leader who supported Pakistan, and leaders of the Christian, Parsi and Hindu communities who worked for the new state. After independence, minorities continued to serve Pakistan in politics, the armed forces, education and other fields.

C. Answer the following questions in detail.

(i) What was the significance of the formation of the All India Muslim League?

The formation of the Muslim League in Dhaka in 1906 gave the Muslims of India their own political party and voice. It protected Muslim political rights, demanded separate electorates and safeguards, and later, under Quaid-e-Azam, became the party that achieved Pakistan.

(ii) Discuss the annulment of the partition of Bengal. Why were Hindu leaders against this partition?

The British partitioned Bengal in 1905 for administrative reasons, but Hindu leaders opposed it because it divided the Hindu majority and weakened their political power in Bengal. After strong agitation and the Swadeshi Movement, the British annulled the partition in 1911, which disappointed the Muslims, who had welcomed the separate Muslim-majority province of East Bengal.

(iii) Evaluate the importance of the Khilafat Movement.

The Khilafat Movement of 1919-1924 united Hindus and Muslims in a common struggle, because Gandhi joined it with the Non-Cooperation Movement. It gave the Muslims political experience and mass organisation, but it failed when Turkey itself abolished the Khilafat. Its failure taught the Muslims to rely on their own separate political organisation.

(iv) Analyse the importance of the Lahore Resolution.

The Lahore Resolution of 23 March 1940 demanded independent states for the Muslims in the north-western and eastern zones of India. It was the first formal demand for Pakistan and became the goal of the Muslim League. Every later negotiation, including the elections of 1945-46, was judged by this resolution.

(v) Describe 3rd June Plan 1947 in detail.

The 3rd June Plan of 1947, announced by Lord Mountbatten, provided for the partition of India into Pakistan and India, with the Muslim-majority provinces forming Pakistan. It gave the provincial assemblies the right to vote for Pakistan or India, provided for referendums in the North-West Frontier Province and Sylhet, and set 15 August 1947 as the date of independence.

D. Skills / extension activities (activity prompts with an approach note).

(i) History Skills: Find the text of the 1940 resolution and analyze its important parts.

Approach: read the Lahore Resolution text and note its demand for independent Muslim states, the safeguards for minorities, and its place as the League's goal.

(ii) Investigating: Undertake an internet research and find out how can the ideology of Pakistan be made cornerstone of all the policies of Pakistan.

Approach: research how the ideology is reflected in the Constitution and in education, welfare and foreign policy, and give examples of each.

(iii) Change and Continuity: The constitution of Pakistan guarantees Minority Rights. Find different Articles of the Constitution 1973.

Approach: look up the 1973 Constitution, especially the articles on freedom of religion, protection of minorities and equality before law, and list them with their numbers.

Chapter 3: Land of Pakistan

Assessment 3

A. Multiple choice questions. (Correct option marked with a green tick.)

(1) What is the total area of Pakistan?

(a) 796,096 square kilometers

(b) 307,375 sq miles

(c) Both A and B ✓

(d) 756,096 square kilometers

(2) Which of the following is the capital of Pakistan?

(a) Islamabad ✓

(b) Karachi

(c) Lahore

(d) Rawalpindi

(3) How many provinces are there in Pakistan?

(a) four ✓

(b) five

(c) six

(d) three

(4) Which of the following countries shares the longest border with Pakistan?

(a) India

(b) China

(c) Afghanistan ✓

(d) Iran

(5) Which of the following is NOT a key advantage of Pakistan's geostrategic location?

(a) Access to global markets and energy resources

(b) Transit trade route to Afghanistan and Central Asia

(c) Increasing trade with China ✓

(d) Central location between South Asia, Central Asia, and the Middle East

(6) Which of the following is a major challenge to Pakistan's geostrategic importance?

(a) Political instability

(b) Economic underdevelopment

(c) Lack of infrastructure

(d) All of the above ✓

(7) Which of the following is a way that Pakistan can capitalize on its

geostrategic importance?

(a) Invest in infrastructure and transportation

(b) Improve trade relations with neighbouring countries

(c) Promote tourism

(d) All of the above ✓

(8) Which of the following cities is NOT in the Punjab province of Pakistan?

(a) Lahore

(b) Rawalpindi

(c) Faisalabad

(d) Peshawar ✓

(9) Which of the following cities is known as the "Fruit Garden of Pakistan"?

(a) Quetta ✓

(b) Multan

(c) Peshawar

(d) Faisalabad

(10) Which of the following cities is a major tourist destination due to its natural beauty?

(a) Gilgit-Baltistan ✓

(b) Multan

(c) Rawalpindi

(d) Faisalabad

B. Answer the following questions briefly.

(i) What is meant by land locked countries?

Landlocked countries are countries that have no coastline or seaport of their own. They depend on neighbouring countries for access to the sea and for their foreign trade, which makes their trade costly and difficult.

(ii) What is CPEC?

CPEC is the China-Pakistan Economic Corridor, a collection of infrastructure, energy and transport projects linking Gwadar Port with western China. It is part of China's Belt and Road Initiative and aims to improve Pakistan's roads, railways, energy supply and trade.

(iii) What are the natural resources of the Arabian Sea?

The Arabian Sea provides Pakistan with fish and other marine life, and its coast supports ports, shipping and trade. Its seabed and coastal areas also hold oil, gas and mineral prospects, while its beaches and mangroves support tourism and the local fishing economy.

(iv) Why is Jinnah Terminal Karachi an important international airport?

Jinnah International Airport at Karachi is Pakistan's busiest airport and the main gateway for international passengers and cargo. It connects Pakistan with the Middle East, Europe and Asia, and it supports trade, tourism and the large number of Pakistanis working abroad.

(v) What is the significance of Rawalpindi for Pakistan's economy?

Rawalpindi is significant because it is a major commercial, military and transport centre next to the capital, Islamabad. Its markets, industries and the nearby Islamabad airport and highways link the northern areas with the rest of the country and support trade and employment.

(vi) Why is Quetta known as the 'Fruit Garden of Pakistan'?

Quetta is called the Fruit Garden of Pakistan because its cool climate and fertile valleys produce apples, grapes, cherries, apricots and other fruits in large quantities. These fruits are sold all over Pakistan and exported, giving Quetta its special place in the country's fruit trade.

(vii) What is the 'Tropic of Cancer'?

The Tropic of Cancer is the latitude 23.5 degrees north of the Equator, marking the northernmost point where the sun shines directly overhead. It passes to the south of Pakistan, so Pakistan lies in the northern temperate zone, just above this line.

C. Answer the following questions in detail.

(i) How does Pakistan's location affect its economic and industrial development?

Pakistan's location between South Asia, Central Asia and the Middle East makes it a natural trade route and gives it access to the Arabian Sea through Karachi and Gwadar. This helps trade, ports and the China-Pakistan Economic Corridor, but the same location also brings security pressures and dependence on neighbours for transit. Industrial development therefore grows fastest near ports, highways and border crossings, while remote areas lag behind.

(ii) What makes Gilgit-Baltistan important to Pakistan?

Gilgit-Baltistan is important because it holds the Karakoram mountains, the K2 peak, glaciers and the Indus River's sources, which feed Pakistan's water supply. It is the gateway of CPEC through the Khunjerab Pass to China, and its mountains, lakes and valleys make it a major tourist region with great hydroelectric potential.

(iii) How do the following cities of Pakistan contribute to the country's development in different ways? a. Faisalabad b. Lahore c. Karachi.

Faisalabad is Pakistan's textile hub, with mills and markets that provide jobs and exports. Lahore is the cultural and educational capital of Punjab, with universities, services and industry that drive the provincial economy. Karachi is the country's largest city, port and financial centre, handling most of Pakistan's foreign trade and industry.

(iv) How can Pakistan leverage its geo strategic location and the economic potential of Balochistan and Gwadar to promote regional cooperation and economic integration?

Pakistan can use Gwadar Port and Balochistan's minerals, coastline and land routes to offer Central Asia and Afghanistan the shortest route to the sea. By building roads, railways and

energy projects under CPEC and by signing trade agreements, Pakistan can turn its location into transit income, jobs and regional cooperation with China, Central Asia and the Gulf states.

(v) How can Quetta leverage its strategic location and natural resources to promote sustainable development for its residents and the region?

Quetta can use its position on trade routes to Afghanistan and Iran, together with its fruit orchards, minerals and cool climate, to grow trade, fruit processing and tourism. Careful use of water, investment in cold storage and transport, and training for local people can turn these resources into steady jobs without damaging the environment.

D. Skills / extension activities (activity prompts with an approach note).

(i) Geographical Skills: 1. Identify the longitudes 64 degrees E, 70 degrees E, and 76 degrees E on the map of Pakistan. 2. Identify the latitudes Tropic of Cancer 23.5 degrees N, latitudes 30 degrees N, 36 degrees N on the map of Pakistan. 3. Locate and label the neighboring countries including (India, China, Afghanistan and Iran) on the map of Pakistan.

Approach: on a map of Pakistan, mark the given longitudes and latitudes with a ruler and label India, China, Afghanistan and Iran on the correct borders.

(ii) Investigating: Undertake an internet research and find out how can Pakistan's cities be made more sustainable by addressing poverty, inequality, climate change, and environmental degradation?

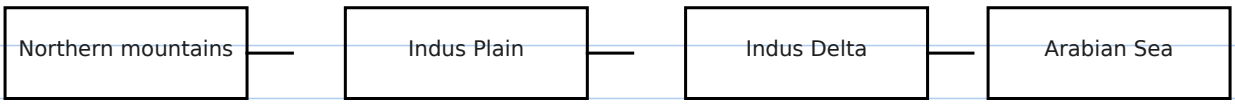

Approach: research planned housing, clean water, public transport and green spaces, and note how each measure reduces poverty and pollution in Pakistani cities.

(iii) Change and Continuity: How have Pakistani cities changed over time in terms of transport, industry and tourism? Write an essay to put forward your views.

Approach: write an essay comparing older transport, small industry and limited tourism with today's motorways, industrial zones and growing tourism, giving city examples.

Chapter 4: The Natural Topography and Vegetation of Pakistan

Diagram: The Indus River System (Chapters 4 and 6)

Tributaries Jhelum, Chenab, Ravi, Beas and Sutlej join the Indus in the plain.

Assessment 4

A. Multiple choice questions. (Correct option marked with a green tick.)

(1) What is the average elevation of the Waziristan Hills?

(a) 1,500 to 2,500 meters ✓

(b) 2,500 to 3,500 meters

(c) 3,500 to 4,500 meters

(d) 4,500 to 5,500 meters

(2) What type of vegetation is adapted to the Waziristan Hills' arid climate?

(a) Evergreen oaks and pines

(b) Deciduous trees and shrubs ✓

(c) Grasslands and wildflowers

(d) All of the above

(3) What is the average elevation of the Karakoram Mountains?

(a) 4000 meters

(b) 5000 meters

(c) 6000 meters ✓

(d) 7000 meters

(4) What is the name of the pass that provides vital links to China through the Karakoram Highway?

(a) Bolan

(b) Tochi

(c) Khunjerab ✓

(d) Khyber

(5) What is the name of the national park located in the Deosai Plateau, known for its alpine meadows and wildlife?

(a) Deosai National Park ✓

(b) Swat Valley

(c) Hindu Kush Mountains

(d) Karakoram Mountains

(6) What is the name of the mountain range located south of the Hindu Kush Mountains, characterized by sub-parallel ranges separated by rivers?

(a) Deosai Plateau

(b) Kohistan, Swat, and Dir Ranges ✓

(c) Karakoram Mountains

(d) Himalayas

(7) What is the name of the delta formed by the Indus River as it branches into distributaries near Thatta in Sindh?

(a) Kirana Bar

(b) Sandal Bar

(c) Ganji Bar

(d) Indus Delta ✓

(8) What is the name of the desert located to the southeast of Pakistan, renowned for its unique flora and home to the Nara Desert?

(a) Thal Desert

(b) Kharan Desert

(c) Thar Desert ✓

(d) Cholistan Desert

(9) What is the name of the flood plain located farther from the active flood plains and experiences periodic flooding due to heavy mountain rains?

(a) Active Flood Plain

(b) Old Flood Plain ✓

(c) Piedmont Plain

(d) Bar Uplands

(10) What is the name of the province that encompasses the Kharan Desert, located in the southwestern Balochistan province?

(a) Punjab

(b) Sindh

(c) Khyber Pakhtunkhwa

(d) Balochistan ✓

B. Answer the following questions briefly.

(i) What is Hamun?

A Hamun is a shallow seasonal lake or wetland in a desert basin, formed when rivers or rainwater collect in a low area. In Pakistan, the Hamuns of Balochistan, such as Hamun-e-Mashkel, fill in wet years and dry up in dry years.

(ii) With name examples, explain the importance of passes for the economy of

Pakistan.

Passes such as Khyber, Bolan, Khunjerab and Tochi connect Pakistan with Afghanistan, Iran and China through the mountains. They carry trade, transport and tourism, and the Khunjerab Pass on the Karakoram Highway is vital for CPEC trade with China.

(iii) Explain the significance of salt range.

The Salt Range in Punjab is significant because it holds large deposits of rock salt, coal, gypsum and other minerals. Its mines, such as Khewra, provide employment and exports, while its hills also protect the Potwar Plateau and shape the local climate.

(iv) Explain the economic and environmental importance of northern mountains for Pakistan.

The northern mountains store snow and glaciers that feed the Indus River, giving Pakistan water for farming and hydroelectric power. They also provide forests, minerals and tourism, and they protect the country from cold northern winds, shaping its climate.

(v) Explain the important features of the western mountains of Pakistan. Also explain the significance of the western mountains to the economy of Pakistan.

The western mountains, including the Sulaiman, Kirthar and Toba Kakar ranges, are dry, rugged and lower than the northern mountains, with passes such as Bolan and Khojak. They are important because they hold minerals, support livestock grazing, and carry trade routes to Afghanistan and Iran.

(vi) What is meant by Inland drainage? Give examples.

Inland drainage means that rivers and streams do not reach the sea but end in inland lakes, marshes or deserts. Examples in Pakistan are the streams of Balochistan that drain into Hamun-e-Mashkel and other inland basins, instead of joining the Indus.

(vii) Write short notes on the following: a. livestock in Balochistan. b. Natural disasters in northern mountains

a. Livestock in Balochistan: sheep, goats and camels are the main livestock, kept by nomadic and semi-nomadic people on dry pastures. They provide meat, milk, wool and income, but water shortage and drought often threaten them. b. Natural disasters in northern mountains: earthquakes, landslides, avalanches and glacial lake floods are common because of steep slopes and active fault lines. They damage roads, homes and crops, so early warning and safe building are essential.

C. Answer the following questions in detail.

(i) Describe the main features of the deserts of Pakistan and how the available resources exploited to improve the lives of the local people.

Pakistan's main deserts are Thar in Sindh, Cholistan in Punjab, and Thal and Kharan in Balochistan and Punjab. They are dry, sandy areas with low rainfall, where people keep livestock and grow crops only where irrigation water is available. Their resources, such as minerals, salt, coal in Thar, and desert tourism, are used to give local people jobs, while

irrigation from canals, as in parts of Thar, turns barren land into farmland.

(ii) Explain the economic potential of Pothwar plateau and Salt ranges to the economy of Pakistan. Also give examples.

The Potwar Plateau has oil, gas and coal reserves, fertile rain-fed farming, and industries around Rawalpindi and Islamabad. The Salt Range adds rock salt from Khewra, gypsum and limestone for cement, which are mined and exported. Together they give Pakistan minerals, energy, employment and revenue.

(iii) Compare and contrast the relief features of Balochistan and Pothwar Plateau.

Balochistan Plateau is a large, dry, high plateau with mountain ranges, deserts and a long coastline, and it is sparsely populated. The Potwar Plateau is smaller, lower and more fertile, with dissected hills, ravines and rain-fed farming near Rawalpindi. Both are plateaus with mineral wealth, but Balochistan is drier, larger and richer in minerals, while Potwar is wetter and more closely settled.

(iv) Describe the differences between the Northern mountains and Western Mountains.

The northern mountains, the Karakoram, Himalayas and Hindu Kush, are very high, snow-covered and young, with peaks above 7,000 metres and large glaciers. The western mountains, the Sulaiman and Kirthar ranges, are lower, drier and more rugged, with few glaciers and sparse vegetation. The north gives Pakistan its great rivers and tourism, while the west gives minerals, passes and grazing land.

(v) Explain the features of Indus plain and their importance for the agro-based economy of Pakistan.

The Indus Plain is a flat, fertile plain formed by the Indus and its tributaries, divided into the upper and lower plains and the delta. Its rich alluvial soil, canal irrigation and warm climate make it Pakistan's main farming region, growing wheat, cotton, rice and sugarcane. Most of Pakistan's population, industry and food supply depend on this plain.

D. Skills / extension activities (activity prompts with an approach note).

(i) Geographical Skills: Identify and label the following landforms on the map of Pakistan: 1. The Pothwar Plateau 2. The Salt Range 3. The Sulaiman Mountains 4. The Kirthar Range 5. The Indus River 6. The Hingol Desert 7. The lesser Himalayas 8. The Karakoram Mountains 9. The Balochistan Plateau 10. Quetta

Approach: on a map of Pakistan, locate and label each plateau, range, river, desert and city in its correct region.

(ii) Inquiry Question: The Thar Desert is a unique and challenging ecosystem, home to a variety of plants and animals that have adapted to the harsh conditions. What are some of the ways in which the Thar Desert's flora and fauna have adapted to their environment?

Approach: describe adaptations such as deep roots, small leaves, water-storing plants,

nocturnal animals and drought-resistant livestock, with examples from the Thar.

Chapter 5: Climate of Pakistan and Environmental Hazards

Assessment 5

A. Multiple choice questions. (Correct option marked with a green tick.)

(1) Which of the following is NOT a characteristic of the highland climate zone in Pakistan?

(a) prolonged, frigid winters

(b) short, temperate summers

(c) abundant rainfall throughout the year ✓

(d) clear correlation between altitude and rainfall distribution

(2) Which of the following is a major challenge faced by farmers in the climatic highland zone due to climate change?

(a) declining water availability

(b) deforestation leading to reduced fodder availability

(c) increased frequency and intensity of extreme weather events

(d) all of the above ✓

(3) Which of the following is a major economic activity in the Indus plains of Punjab and Sindh?

(a) cultivation of crops like cotton, millet, wheat, and sugarcane ✓

(b) nomadic lifestyles and transhumance

(c) livestock rearing and handicrafts production

(d) tourism in the Cholistan Desert

(4) Which of the following is a unique feature of the arid climate zone in Pakistan?

(a) the presence of the Karez irrigation system ✓

(b) the prevalence of sea breezes throughout the year

(c) the occurrence of heavy rainfall during the monsoon season

(d) the distinct seasonal contrast between hot summers and cool winters

(5) Which of the following is NOT a human factor contributing to river floods in Pakistan?

(a) building settlements on floodplains

(b) deforestation leading to increased surface runoff

(c) reduced capacity of dams to store floodwater

(d) torrential rainfall caused by a hurricane ✓

(6) Which of the following is a permanent form of drought in Pakistan?

(a) seasonal drought in the Barani regions

(b) invisible drought caused by deforestation

(c) unpredictable drought due to climate change

(d) permanent drought in desert areas ✓

(7) Which of the following government measures is NOT aimed at preventing river floods?

(a) early warning systems for farmers

(b) flood insurance for financial recovery ✓

(c) afforestation and reafforestation

(d) urban planning to reduce impervious surfaces

(8) Which non coastal city in Pakistan is vulnerable to tropical cyclones?

(A) Karachi

(B) Thatta

(C) Badin

(D) Peshawar ✓

(9) Which of the following statements is NOT true about the monsoon winds in Pakistan?

(a) The monsoon winds blow from the Arabian Sea towards the land surface during the summer months.

(b) The monsoon winds bring warm, moist air to Pakistan during the summer months.

(c) The monsoon winds cause heavy rainfall in Pakistan during the summer months.

(d) The monsoon winds blow from the land surface towards the Arabian Sea during the winter months. ✓

(10) Which of the following regions in Pakistan does NOT receive enough rainfall for crop production?

(a) arid regions of Balochistan ✓

(b) humid regions of the Himalayas

(c) Potwar Plateau

(d) Indus Plain

B. Answer the following questions briefly.

(i) What are the main climatic characteristics of Highland zone of Pakistan?

The highland zone has long, cold winters with snowfall and short, cool summers. Rainfall and snowfall increase with altitude, and temperatures fall as height rises, so farming is limited and livestock grazing is common.

(ii) Describe temperature inversion layer?

A temperature inversion layer is a layer of the atmosphere in which temperature increases with height, instead of falling as usual. It traps cold air, smoke and fog below it, which causes fog, smog and poor air quality in winter, especially in cities and valleys.

(iii) Explain some important measures to prevent floods in Pakistan.

Floods can be prevented by building and maintaining dams, barrages, embankments and drainage channels, and by planting trees on hillsides to reduce runoff. Early warning systems, flood forecasting and avoiding construction on floodplains also protect lives and property.

(iv) Why do many rivers flood in Pakistan in summer? What can be done to reduce the risk of flooding?

Rivers flood in summer because of heavy monsoon rains and melting snow and glaciers in the northern mountains, which raise river levels sharply. The risk can be reduced by storing water in dams, strengthening embankments, clearing channels, planting forests and giving early flood warnings.

(v) How does the yearly distribution of rainfall and temperature vary between Karachi and Lahore?

Karachi has a mild coastal climate, with moderate temperatures all year and very little rainfall, mostly in the summer monsoon. Lahore has hot summers, cool winters and more rainfall, from both the summer monsoon and winter western depressions, so its seasonal temperature range is much larger.

(vi) Explain the development of Monsoon winds in Arabian sea.

In summer, the land of South Asia heats up faster than the Arabian Sea, creating low pressure over land and high pressure over the sea. Moist winds therefore blow from the sea towards the land, bringing monsoon rain to Pakistan, while in winter the pattern reverses.

(vii) Describe the effectiveness of winter rainfall for water management and crops cultivation.

Winter rainfall from western depressions is very useful because it comes slowly and soaks into the soil, recharging groundwater and filling dams. It supports the Rabi crops, especially wheat, at a time when the summer monsoon water has run out, so it is vital for food production.

C. Answer the following questions in detail.

(i) Why is Monsoon rainfall less effective in Pakistan? Discuss the key challenges and opportunities particularly in Indus plain.

Monsoon rainfall is less effective in Pakistan because it is uneven, short and often very heavy, so much water runs off or causes floods instead of soaking into fields. In the Indus Plain, this creates both water shortage and flood damage, but better storage in dams, rainwater harvesting and efficient irrigation could turn monsoon water into a reliable resource for farming.

(ii) Discuss the factors responsible for temperature variations in Pakistan.

Temperature in Pakistan varies with latitude, altitude, distance from the sea and the seasons. Northern highlands stay cold, southern plains become very hot in summer, and

coastal Karachi stays moderate because of sea breezes, while deserts show large day-night differences.

(iii) Explain the sources of rainfall in Pakistan and how they vary seasonally. Give examples to substantiate your answer.

Pakistan gets rainfall from three main sources: the summer monsoon from the Arabian Sea and the Bay of Bengal, winter western depressions from the Mediterranean, and local convectional rain in summer. The monsoon brings most rain to Punjab and Sindh in July to September, western depressions bring winter rain and snow to the north and west, and convectional showers occur in hot months.

(iv) Differentiate between the lifestyle of people living in coastal, Lowland and Arid zone of Pakistan.

Coastal people in Karachi and Gwadar depend on fishing, ports and trade, and live in a humid, moderate climate. Lowland people in the Indus Plain farm irrigated crops and live in villages and towns with hot summers. Arid-zone people in Balochistan and Cholistan keep livestock, depend on scarce water, and often migrate seasonally in search of pasture.

(v) Write short notes on the following topics: 1. Government Efforts to Reduce the Effects of Drought 2. Advantages and Disadvantages of Floods in Pakistan

1. Government Efforts to Reduce the Effects of Drought: the government builds small dams, promotes water conservation, drip irrigation and drought-resistant crops, and gives relief, loans and food support in drought-hit areas. 2. Advantages and Disadvantages of Floods: floods deposit fertile silt on fields and recharge groundwater, but they also destroy crops, homes and roads, spread disease and displace large numbers of people.

D. Skills / extension activities (activity prompts with an approach note).

(i) Forming opinions: Do you think that the proposed seasonal canal from Sukkhar Barrage to the Thar Desert is a good idea? Why or why not?

Approach: weigh the benefits of irrigation water for Thar against the cost, water loss and environmental effects, and give a reasoned opinion with examples.

Chapter 6: Water Resources

Assessment 6

A. Multiple choice questions. (Correct option marked with a green tick.)

(1) One of the world's largest earth-filled dams is:

(a) Diamer-Bhasha Dams

(b) Tarbela Dam ✓

(c) Mangla Dam

(d) Rawal Dam

(2) Jhelum, Chenab, and Ravi are the tributaries of:

(a) Balochistan Basin Aquifer

(b) Sutlej River System

(c) Indus River System ✓

(d) Kirthar Ford Belt Aquifer

(3) The monsoon season in Pakistan normally lasts from:

(a) March to May

(b) July to September ✓

(c) September to November

(d) November to January

(4) An important time for farmers when they prepare for planting and cultivation is:

(a) winter

(b) spring ✓

(c) summer

(d) autumn

(5) The season when water flow increases but water quality decreases is:

(a) winter

(b) spring

(c) summer ✓

(d) autumn

(6) Excessive groundwater extraction for irrigation results in:

(a) decreasing water tables ✓

(b) increasing salination

(c) water logging

(d) irregular water flow

(7) Poor drainage and excessive watering can result in:

(a) water logging ✓

(b) poor crops

(c) regional differences

(d) decreasing water tables

(8) Water-efficient crops need:

(a) salt water

(b) no water

(c) more water

(d) less water ✓

B. Answer the following questions briefly.

(i) Which sectors are benefited from surface water resources?

Agriculture benefits most from surface water, because rivers and canals irrigate crops across the Indus Plain. Industry, hydropower generation, fishing, domestic water supply and transport also depend on surface water from rivers, lakes and reservoirs.

(ii) Name important tributaries of the Indus River System.

The important tributaries of the Indus are the Jhelum, Chenab, Ravi, Beas and Sutlej in the east, and the Kabul, Swat and Kurram in the west. These rivers join the Indus in Punjab and carry water for farming, power and daily use.

(iii) What are some important canals of Pakistan?

Important canals of Pakistan include the Upper and Lower Bari Doab canals, the Sidhnai, the Rohri and Nara canals in Sindh, and the canals from the Sukkur, Guddu and Kotri barrages. They distribute Indus water to millions of acres of farmland.

(iv) Why water quality suffers during the Monsoon season?

Water quality suffers in the monsoon because heavy rain washes soil, waste, fertilisers and sewage into rivers and canals, making the water muddy and polluted. High flows also stir up silt, so the water becomes unsafe for drinking without treatment.

(v) Analyse the important advantages of extensive irrigation in Pakistan.

Extensive irrigation turns dry land into farmland, allows two crops a year, and supports Pakistan's food supply and exports of cotton, wheat and rice. It also provides jobs, supports livestock and industry, and reduces dependence on uncertain rainfall.

C. Answer the following questions in detail.

(i) Suggest some sustainable solutions to water resources management.

Sustainable water management needs new storage dams, repair of leaking canals, and efficient methods such as drip and sprinkler irrigation. It also needs pricing that discourages waste, treatment and reuse of wastewater, and public awareness about saving water.

(ii) Describe seasonal fluctuations in the flow and quality of water in Pakistan.

River flow is low in winter, rises with snowmelt in spring, and peaks in the summer monsoon, when floods are common. Water quality is best in winter and worst in summer, when floods carry silt and pollution, while in dry months the flow falls and salts increase.

(iii) What are some disadvantages of the extensive irrigation system in Pakistan?

Extensive irrigation causes waterlogging and salinity, which damage soil and reduce crop yields in many canal areas. It also wastes large amounts of water through seepage, creates disputes over water sharing, and depends on rivers that are under pressure from climate change.

(iv) Analyse the vital role dams, barrages, canals, and water reservoirs offer towards sustainable solutions.

Dams and barrages store monsoon water, control floods and generate hydropower, while canals distribute water fairly to farms. Reservoirs save water for dry months, recharge groundwater and support fishing and recreation, so together they make Pakistan's water supply more secure and sustainable.

(v) What is the impact of dams, barrages, canals, and water reservoirs on agriculture, environment, industry, and human activities?

Dams and canals have expanded farming, increased food production and supported industry and hydropower across Pakistan. On the other hand, they displace people, change river ecosystems, cause waterlogging and salinity, and alter fishing and community life, so their benefits must be balanced with environmental care.

D. Skills / extension activities (activity prompts with an approach note).

(i) History Skills: Using different sources find out historical data of irrigation in Pakistan during different decades.

Approach: compare irrigation area, canal building and crop production in different decades using textbooks, government reports and reliable online sources.

(ii) Investigating: Investigate causes of shortage of water in different parts of the country.

Approach: research population growth, climate change, poor storage, water wastage and unequal distribution as causes of shortage, with regional examples.

(iii) Change and Continuity: Pakistan faces catastrophic floods every year. Suggest some steps through which this phenomenon could be controlled.

Approach: suggest dams, embankments, reforestation, early warnings, planned settlements and better drainage, explaining how each step reduces flood damage.

Chapter 7: Population Structure and Growth

Assessment 7

A. Multiple choice questions. (Correct option marked with a green tick.)

(1) According to the census of 2017, the density of population of Pakistan was:

(a) 287.93 people/sq. km

(b) 250.5 people/sq.km

(c) 260.88 people/sq.km ✓

(d) 270.4 people/sq. km

(2) According to the census of 2017, the urban population of Pakistan was:

(a) 84.69 million

(b) 75.67 million ✓

(c) 65.4 million

(d) 90.00 million

(3) Karakoram mountains are in the Part of Pakistan:

(a) western

(b) eastern

(c) northern ✓

(d) southern

(4) Balochistan is a populated province of Pakistan:

(a) Scarcely ✓

(b) Densely

(c) Evenly

(d) Unevenly

(5) The capital of Punjab is:

(a) Karachi

(b) Peshawar

(c) Quetta

(d) Lahore ✓

(6) Transhumance is the migration of people:

(a) In the northern mountains ✓

(b) In the desert areas

(c) In the Indus plain

(d) In the coastal areas

(7) Most farmers in rural areas practise:

(a) Subsistence farming ✓

(b) Intensive farming

(c) Extensive farming

(d) Commercial farming

B. Answer the following questions briefly.

(i) Examine the factors that contribute to the variations in population density across different regions of Pakistan.

Population density varies because of climate, water, fertile land, jobs and transport. Punjab and Sindh are densely populated because of irrigation, farming and industry, while Balochistan is sparsely populated because of deserts, mountains and scarce water.

(ii) Analyse the influence of push and pull factors on rural-urban migration.

Push factors such as low farm income, unemployment and lack of schools and hospitals drive people out of villages. Pull factors such as jobs, better wages, education and health facilities in cities attract them, so rural-urban migration grows steadily.

(iii) Explore the reasons behind the population growth in Pakistan.

Pakistan's population grows fast because of high birth rates, falling death rates due to better health care, and early marriages. Low literacy, especially among women, and limited family planning also contribute to rapid growth.

(iv) Assess the detrimental effects of rural-urban migration on economy of Pakistan.

Rural-urban migration creates overcrowded cities, slums, unemployment and pressure on housing, water, transport and health services. It also leaves villages short of young workers, which harms farming and rural development.

(v) Propose strategies to mitigate rural-urban migration in Pakistan.

Rural-urban migration can be reduced by creating jobs, industries and better schools and hospitals in villages and small towns. Improved roads, electricity, irrigation and rural credit would make village life more attractive and reduce the need to move to cities.

(vi) What is census? Also explain its importance for the development of Pakistan.

A census is the official counting of a country's population, recording age, sex, education, occupation and housing. It is important because governments use census data to plan schools, hospitals, jobs, elections and development funds fairly across provinces.

(vii) Describe the population pyramid of Pakistan.

Pakistan's population pyramid has a very wide base, showing a large number of children and young people, and it narrows quickly towards the top. This shape shows high birth rates, a young population and a small proportion of old people, which means great demand for education and jobs.

C. Answer the following questions in detail.

(i) Assess the relevance of the demographic transition model in understanding the varying phases of population growth.

The demographic transition model is relevant because it explains how countries move from

high birth and death rates to low birth and death rates as they develop. Pakistan is in the middle stage, with falling death rates but still high birth rates, which explains its rapid population growth.

(ii) Evaluate the prospects for achieving sustainable population growth in Pakistan.

Sustainable population growth is possible if Pakistan improves female education, health services and family planning, and creates jobs for its young population. With these steps, birth rates can fall gradually, but without them the population will keep growing fast and strain resources.

(iii) Explain the importance of urbanisation in development journey of Pakistan.

Urbanisation is important because cities provide industry, trade, education, health and services that drive economic growth. Karachi, Lahore and Faisalabad generate most of Pakistan's industry and tax revenue, but unplanned urban growth also creates slums and pollution.

(iv) Describe the types of migration in rural areas of Pakistan.

Rural migration in Pakistan includes seasonal migration, when workers move for harvests, and permanent migration to cities for jobs. It also includes transhumance, the seasonal movement of herders between high and low pastures, and migration caused by floods, droughts and poverty.

(v) Explain the problems caused by urbanisation. Discuss with reference to Karachi, Lahore and Peshawar.

Urbanisation causes overcrowding, traffic congestion, water shortage, pollution and slums in Karachi, Lahore and Peshawar. Karachi faces severe water and transport problems, Lahore suffers from smog and housing pressure, and Peshawar faces rapid growth with limited services and infrastructure.

D. Skills / extension activities (activity prompts with an approach note).

(i) Extension Activities: I. Have students research and present on specific examples of rural-urban migration and seasonal migration in Pakistan. ii. Ask students to analyse population pyramids of different countries and identify their stage in the demographic transition model. iii. Engage students in a discussion on the challenges and opportunities associated with population growth and urbanisation in Pakistan.

Approach: present real migration examples, compare population pyramids of countries at different stages, and discuss both the problems and the opportunities of growth and urbanisation.

Chapter 8: Agriculture, Livestock and Fisheries

Assessment 8

A. Multiple choice questions. (Correct option marked with a green tick.)

(1) What is the approximate number of people employed by the fishing sector in Pakistan?

(a) 2 million ✓

(b) 12 million

(c) 22 million

(d) 100 million

(2) What is one of the biggest challenges facing the fishing sector in Pakistan?

(a) overfishing

(b) fishing of endangered species

(c) water Pollution

(d) all of the above ✓

(3) What is the most cultivated cash crop in Pakistan?

(a) wheat

(b) rice

(c) cotton ✓

(d) tobacco

(4) What are three of the benefits of cash farming in Pakistan?

(a) It provides income for farmers ✓

(b) provides food security

(c) It creates jobs in the industrial sector

(d) It is for farmer and his family use only

(5) Which of the following is a method of cultivation of rice?

(a) broadcasting

(b) transplanting

(c) both a and b ✓

(d) none of the above

(6) Which of the following is a method of cultivation of sugarcane?

(a) stalk cutting ✓

(b) ratooning

(c) trench planting

(d) transplanting

(7) Which of the following is a key difference between nomadic and transhumance herding?

(a) Nomadic herders move in search of pasture, while transhumant herders follow a regular seasonal migration pattern. ✓

(b) Nomadic herders typically have permanent homes, while transhumant herders do not.

(c) Nomadic herders raise a variety of livestock, while transhumant herders typically specialize in one or two types of livestock.

(d) Nomadic herding is practiced in all parts of the world, while transhumance is only practiced in certain regions.

(8) What is one of the benefits of nomadic and transhumance herding?

(a) It allows herders to access a wider range of grazing resources.

(b) It helps to reduce the risk of overgrazing in any one area.

(c) It allows herders to avoid conflict with other herders or farmers.

(d) all of the above ✓

(9) Which of the following is a difference between inland fish farming and aquaculture farming?

(a) Inland fish farming is practiced in freshwater bodies, while aquaculture farming can be practiced in both freshwater and saltwater bodies. ✓

(b) Inland fish farming typically involves smaller-scale operations, while aquaculture farming can involve both small-scale and large-scale operations.

(c) Inland fish farming is typically practiced in developing countries, while aquaculture farming is typically practiced in developed countries.

(d) Inland fish farming is a newer practice, while aquaculture farming has been practiced for centuries.

(10) Which of the following is a similarity between inland fish farming and aquaculture farming?

(a) Both practices involve the farming of aquatic organisms.

(b) Both practices can be used to produce food for human consumption.

(c) Both practices can provide income and employment opportunities for people.

(d) all of the above. ✓

B. Answer the following questions briefly.

(i) Contrast the inputs, processes, and outputs of cash crop farms and small-scale subsistence farms.

Cash crop farms use large inputs of seeds, fertilisers, machinery and irrigation, and produce crops such as cotton and sugarcane for sale and export. Subsistence farms use family labour and few inputs, and produce mainly wheat, vegetables and fodder for the family's own use, with little surplus for sale.

(ii) List the fishing ports located along the Sindh and Makran coasts.

Fishing ports along the Sindh coast include Karachi Fish Harbour, Ibrahim Hyderi and Keti

Bunder. Along the Makran coast of Balochistan are Gwadar, Pasni, Ormara and Jiwani, which serve the deep-sea fishing fleets.

(iii) Describe the physical characteristics of rice and wheat crops.

Rice is a Kharif crop that needs standing water, warm temperatures and fertile clay soils, and it grows in flooded fields. Wheat is a Rabi crop that needs cool weather, moderate rainfall and well-drained loamy soil, and it is the staple food crop of Pakistan.

(iv) Explain the differences in temperature, rainfall, and soil requirements for sugarcane and cotton cultivation.

Sugarcane needs high temperatures, heavy rainfall or irrigation, and deep fertile soils, and it grows for almost a year. Cotton needs warm, dry weather, moderate rainfall and light loamy soil, and it is damaged by heavy rain at picking time, so the two crops suit different areas and seasons.

(v) Identify three common challenges that hinder the growth of cash crops in Pakistan.

Cash crops are hindered by water shortage, pests and diseases, and low-quality seeds, which reduce yields. Farmers also face high input prices, poor storage and transport, and unstable market prices, which lower their income.

(vi) Suggest sustainable agriculture practices for Pakistan.

Sustainable practices include crop rotation, use of organic manure, drip irrigation, and growing drought-resistant varieties. Protecting soil with trees, reducing chemical use, and using modern weather advice can raise yields without damaging land and water.

(vii) Compare the contributions of cotton, rice, fisheries, and livestock to Pakistan's employment sector.

Cotton provides jobs in farming, ginning and textiles, and rice provides jobs in farming, milling and export trade. Fisheries employ fishermen, processors and traders along the coasts, while livestock employs the largest number of rural families in rearing, dairy and wool work.

C. Answer the following questions in detail.

(i) What are the important strategies for the sustainable growth of cash crops in Pakistan? Explain with reference to rice, cotton, sugar cane and wheat.

Sustainable growth needs better seeds, efficient irrigation and balanced fertiliser use for rice, cotton, sugarcane and wheat. Crop rotation, pest management, timely sowing and fair prices would raise yields, protect soil and water, and increase farmers' income across all four crops.

(ii) Explain the importance of maize, tobacco and other crops for the economy of Pakistan.

Maize is important as food, animal feed and industrial raw material, while tobacco provides government revenue and jobs in farming and factories. Other crops such as pulses, oilseeds

and vegetables add to food security, employment and exports, reducing dependence on a few major crops.

(iii) To what extent livestock farming is important for the economic development of Pakistan?

Livestock farming is very important, contributing a large share of agricultural income and providing milk, meat, wool and leather. It employs millions of rural families, supports the dairy and leather industries, and earns foreign exchange, making it a backbone of the rural economy.

(iv) Describe the method of rice, tobacco and wheat cultivation.

Rice is grown by transplanting seedlings into flooded fields or by broadcasting seed, then harvested when the grain ripens. Tobacco is raised in nurseries, transplanted to fields, and its leaves are picked and cured, while wheat is sown by drill or broadcasting in winter and harvested in spring.

(v) Describe the fishing methods used by marine and Inland fishing in Pakistan.

Marine fishing uses trawlers, gill nets and long lines from boats along the Sindh and Makran coasts, catching fish in the Arabian Sea. Inland fishing uses nets, ponds and fish farms in rivers, lakes and dams, where fish such as rohu and catla are raised and caught.

(vi) Suggest measures to protect and develop the fishing industry in Pakistan.

The fishing industry can be protected by controlling overfishing, banning harmful nets, and protecting fish breeding grounds and mangroves. Cold storage, modern boats, training and fair prices would raise fishermen's income and develop exports.

(vii) Compare the environmental and economic impact of different crop types and farming practices.

Cash crops such as cotton and sugarcane earn more money but use much water and chemicals, which can damage soil and water. Food crops and sustainable practices such as rotation and organic farming earn less per acre but protect the environment, so a balance between income and sustainability is needed.

D. Skills / extension activities (activity prompts with an approach note).

(i) Forming Opinions: Developing fish farms in the Indus plain using abandoned river channels or canal water can help reduce the burden on crops and livestock. Explain whether you might agree or disagree.

Approach: argue for or against fish farming in old channels, weighing extra income and protein against water use, flooding risk and effects on farming land.

(ii) Project: Research different small-scale farming practices, such as organic farming, permaculture, and agroforestry. Design and implement a small-scale farm plan that considers factors such as crop rotation, companion planting, and soil conservation. Develop a marketing plan to sell small-scale farm products directly to consumers or through local markets.

Approach: research the three practices, draw a farm plan using rotation and companion planting, and write a simple plan for selling produce directly or in local markets.

Chapter 9: Transport And Trade

Assessment 9

A. Multiple choice questions. (Correct option marked with a green tick.)

(1) The most common mode of travel in Pakistan is:

(a) air transport

(b) train transport

(c) road transport ✓

(d) maritime transport

(2) The highway that carries 65% of traffic load in the country:

(a) N-5 ✓

(b) N-10

(c) N-15

(d) N-25

(3) The transport that has more concerns of security and safety is:

(a) train transport

(b) maritime transport

(c) air transport

(d) road transport ✓

(4) The deep seaport in Pakistan is:

(a) Gwadar Port ✓

(b) Karachi Port

(c) Bin Qasim Port

(d) Pasni Port

(5) The border that facilitates trade between Pakistan and India is:

(a) Taftan

(b) Chaman

(c) Wagah ✓

(d) Torkham

(6) Taftan-Mirjavah Border Crossing between Pakistan and:

(a) Afghanistan

(b) India

(c) China

(d) Iran ✓

(7) The European Union (EU) has given Pakistan:

(a) MFN status

(b) GSP+ status ✓

(c) GSP - status

(d) MFN + status

(8) Bilateral trade agreement between Pakistan and China is called:

(a) CPFTA ✓

(b) SAFTA

(c) WTO

(d) CPTP

B. Answer the following questions briefly.

(i) How do the regional differences affect the mode of transport in Pakistan?

Regional differences affect transport because mountains, deserts and plains need different modes: roads serve most areas, railways serve the plains, and air transport serves remote northern areas. Coastal regions use ports and shipping, while landlocked and hilly areas depend on roads and small airfields.

(ii) What do you think are the three most important advantages of air transport?

The three most important advantages of air transport are speed, comfort and access to remote or distant places. It is best for urgent travel, perishable goods and international business, although it is expensive and carries limited cargo.

(iii) How do the dry ports streamline the transport of goods for export?

Dry ports streamline exports by allowing customs clearance, packing and loading far from the seaports, near production areas. Goods are then sent by road or rail to Karachi or Gwadar in sealed containers, which saves time, reduces congestion at ports and lowers costs.

(iv) Which are the most important dry ports of Pakistan? Write any three advantages of dry ports.

Important dry ports of Pakistan are Lahore, Rawalpindi, Faisalabad, Sialkot, Multan and Peshawar dry ports. Their advantages are faster customs clearance, lower transport costs, and reduced pressure on seaports, which helps exporters in inland cities.

(v) How do corruption and political instability affect the trade of a country?

Corruption raises the cost of trade through bribes, delays and red tape, and it discourages foreign investors. Political instability creates uncertainty, disrupts transport and production, and reduces exports, so both factors damage a country's trade and economic growth.

C. Answer the following questions in detail.

(i) Compare the advantages and disadvantages of road and train transport.

Road transport is flexible, reaches door to door, and suits short distances and small loads, but it is costly, causes accidents and pollution, and is slow for bulk goods. Rail transport is cheaper and safer for bulk goods over long distances, but it is less flexible, needs fixed tracks and stations, and is slower for door-to-door delivery.

(ii) Assess the influence of Pakistan's trade routes on trade with different

countries.

Pakistan's trade routes through Karachi and Gwadar ports, the Karakoram Highway to China, and border crossings at Wagah, Torkham, Chaman and Taftan shape its trade. They give access to China, Central Asia, Afghanistan, Iran and the Gulf, but political tensions and poor infrastructure limit their full use.

(iii) Analyze the role of trade in Pakistan's economy.

Trade is vital for Pakistan's economy because exports of textiles, rice and other goods earn foreign exchange and provide millions of jobs. Imports of machinery, oil and raw materials support industry, while trade deficits, when imports exceed exports, put pressure on reserves and the rupee.

(iv) What are the key factors that impact international trade?

International trade is affected by prices, exchange rates, transport costs, tariffs and trade agreements. Political relations, product quality, technology, and global demand also matter, as does a country's ability to produce goods competitively for world markets.

(v) Analyze the internal challenges that Pakistan faces in increasing its share of trade with other nations.

Pakistan faces internal challenges such as energy shortage, high production costs, poor infrastructure, political instability and corruption. Low product quality, limited diversification beyond textiles, and weak marketing also reduce its share of world trade.

D. Skills / extension activities (activity prompts with an approach note).

(i) History Skills: Find out details of different trade agreements of Pakistan since 1947. What were the benefits of these agreements for Pakistan?

Approach: list Pakistan's trade agreements since 1947, such as SAFTA and the China-Pakistan Free Trade Agreement, and note the market access and export benefits of each.

(ii) Investigating: Investigate the causes of the decline of exports in Pakistan during the last two decades.

Approach: research energy crises, high costs, security problems, loss of competitiveness and policy changes as causes of export decline.

(iii) Change and Continuity: Make a list of the motorways in Pakistan and collect data about their construction date, connectivity, and cost incurred on construction.

Approach: list Pakistan's motorways with their routes, opening dates and construction costs from reliable sources.
