Social Studies

Class 7 (English Medium)

Solved Exercises — Sindh Textbook Board

24 lessons — 258 questions

Unit 1, Ch 1: The Ancient World: India

1. (i) Chandragupta Maurya founded the Maurya Empire in _____ BCE.

Answer: founding year explicitly; this is the generally accepted historical year).

1. (ii) The grandson of Chandragupta Maurya was _____ Chandragupta). .

1. (iii) The Maurya Empire lasted for about _____ years.

Answer: 140 years (from 321 BCE to about 185 BCE; the book does not state the duration, this is the generally accepted historical estimate).

1. (iv) Ashoka became king in about _____ 269 BCE.

1. (v) Ashoka's empire included a large part of _____ India.

Answer: northern India (some part of the southern peninsula was not a complete part of the empire).

Question: 2. (i) Make a list of the social, political, economic and administrative factors which affected the progress of the Maurya Empire, and write the effect of each: Factor | Effects on the progress of the Maurya Empire.

Answer: Social factor — society was divided into seven classes (philosophers, farmers, soldiers, herdsmen, craftsmen, officials, councillors); city life and temple-building progressed; effect: an organised society and urban culture arose. Political factor — central government and laws according to the Arthashastra; effect: a strong and stable empire was established. Economic factor — peace was established, agriculture and trade were encouraged, coins were used; effect: prosperity and wealth increased. Administrative factor — the empire was divided into four

provinces with a royal governor in each; effect: control and order over the large empire were maintained.

Question: 2. (ii) Using a map, draw an outline of Alexander the Great's military campaign in northern India.

Answer: Show the route on the map like this: Alexander set out from Macedonia, passed through Persia, crossed the Hindu Kush and entered north-western India (the area of today's Pakistan), fought Raja Porus at the river Jhelum, and then, when his army refused to advance further, he turned back. (The book does not give details of this campaign; it only briefly mentions the conquests of Alexander the Great.)

Question: 2. (iii) Identify the important events and personalities in the Maurya Empire.

Answer: Chandragupta Maurya — founder of the empire, who ended the Nanda Raja and established the empire. Chanakya (Kautilya) — Chandragupta's adviser, author of the Arthashastra. Bindusara — ruler after Chandragupta (298 to 272 BCE). Ashoka — the most famous ruler (272 to 232 BCE); after the Kalinga war he adopted Buddhism and preached Dhamma. The conquests of Alexander the Great — which affected India.

Question: 2. (iv) Highlight the important distinguishing features and qualities of the Gupta Empire.

Answer: In the Gupta Empire period people lived in peace and prosperity; people turned towards Hinduism but other religions had freedom; there was great progress in knowledge, art, science and culture; trade grew and gold coins were used. After the death of Chandragupta II the decline of the empire began: regions slowly separated, the later rulers were not capable of governing, and the empire was destroyed by local and foreign attacks.

Question: 2. (v) State the scientific, cultural and mathematical progress

that took place in the Gupta Empire period.

Answer: In the Gupta period, centrality was achieved in knowledge, art, science, technology, astronomy and mathematics; there was splendid progress in art and literature; that is why the Gupta period is called the golden age of the history of India.

Question: B. Use your research skills. Choose another empire between 500 BCE and 500 CE and research it — get information about its civilisation, government, religion, architecture, art, crafts, geographical conditions and food, and prepare a presentation.

Answer: This is a research activity; it has no single fixed answer. Complete it like this: choose one empire (for example the Roman Empire); collect information on each of the above points from a book, encyclopaedia or the internet; write one or two sentences on each point; finally give the presentation in class.

Question: C. Cooperate with others. Four students work together, collect information about the Maurya Empire and the Gupta Empire, and share their views with other students on what they learnt from the historical events of these two empires.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: the group members collect the important events and personalities of both empires from the chapter of the book; each member tells what lesson they learnt (for example: a strong and just government keeps an empire established, weak rulers destroy an empire); in the end tell the joint conclusion to the class.

Unit 1, Ch 2: Iran (500 BCE to 500 CE)

1. (i) The foundation of the Iranian Empire was laid in the year _____ _____.

Answer: 550 BCE (by, Cyrus the Great).

1. (ii) The famous road which Darius had built is famous by the name of _____.

Answer: went from Susa in Iran to Sardis in Anatolia and its length was 1677 miles).

1. (iii) The religion which gave people answers to the questions about their problems was the religion of _____.

Answer: world and every person should support goodness).

1. (iv) The human tribal people were under another Iranian ruler whose name was _____.

Answer: — the sentence in the book means the Median rule; the book does not state the literal answer to this sentence clearly).

Question: 2. (i) Make a list of the wars which were fought between the Iranians and the Greeks from 490 BCE to 479 BCE and identify who won those wars.

Answer: Battle of Marathon, 490 BCE — the Greeks won. Battle of Thermopylae, 480 BCE — the Iranians won. Naval Battle of Salamis, 480 BCE — the Greeks won. Battle of Plataea, 479 BCE — the Greeks won. Battle of Mycale, 479 BCE — the Greeks won. (The text of the book does not mention these wars; the exercise itself says to search an encyclopaedia or the internet, and this list comes from research as directed.)

Question: 2. (ii) How did Cyrus treat the people whom he conquered?

Answer: Cyrus treated the conquered people with tolerance and respect: he respected their local customs and religions, rebuilt their temples and places of worship, in 538 BCE allowed the Jews to return to their own country, did not allow slavery in his empire, and allowed the people of the conquered regions to keep their own laws and rulers.

Question: 2. (iii) Which methods and means did Darius use to keep his empire united and to strengthen his power?

Answer: Darius divided the empire into 20 provinces (satrapies) and appointed a governor (satrap) in each province; he appointed a separate military commander and tax collector in each province; he appointed spies who were called "the eyes and ears of the king"; he built the Royal Road and a system of roads; and he introduced uniform coins throughout the empire.

Question: B. 1. Get information about the daily life of the Iranian Empire period from the library, newspaper, encyclopaedia or internet, prepare a 3-D poster and present it in your school library.

Answer: This is a research activity; it has no single fixed answer. Complete it like this: collect information about the daily life of the Iranian Empire (food, dress, houses, work, religion) from the above sources; show it in a 3-D model/poster; present it in the class or library.

Question: B. 2. State the effects on the social, political, cultural and religious life of the people of the Iranian Empire.

Answer: Social effect — people of different nations and tribes began living together in one large empire. Political effect — organised administration of the large empire was established through the satrapy system and the Royal Road. Cultural effect — there was progress in architecture, carving and the art of coins. Religious effect — because of the tolerance of the rulers, different religions lived together and Zoroastrianism spread.

Question: B. 3. How did the Iranian Empire progress after the death of Alexander the Great?

Answer: The book does not give details of this. After Alexander's conquest the Iranian (Achaemenid) Empire came to an end; after Alexander's death his large empire was divided among his generals and the region of Iran came into the hands of the Seleucid rulers. (This answer comes from research as directed by the exercise, not from the text of the book.)

Question: B. 4. How was Iranian civilisation affected by Greek civilisation?

Answer: The book does not give details of this. After Alexander's conquest the Greek and Iranian civilisations blended: Greek art, coins, language and administrative methods reached Iran, and Iranian art and customs spread into the Greek world. (This answer comes from research as directed by the exercise, not from the text of the book.)

Question: C. Cooperate with others. Working together in a group of four students, research another civilisation (Egyptian, Roman, Greek, Chinese) and present that information in the form of a booklet.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: choose one civilisation; the group members divide and collect information about its government, religion, art, building and daily life; write all the information in a booklet and present it in class.

Unit 1, Ch 3: Transition to the Modern World

1. (i) The medieval period of history in Europe continued from the year _____ to _____.

Answer: From 400 CE, 1500 CE.

1. (ii) The dark age of history is attributed to _____.

Answer: To the Middle Ages (the medieval period).

1. (iii) The meaning of the Crusades was _____.

Answer: Cross (of the Christians) — wars fought by the Christians to take back the Holy Land (Jerusalem).

1. (iv) The feudal system refers to _____.

Answer: based on it — which included kings, nobles, farmers and labourers.

1. (v) Plague is the disease which spread _____ in Europe.

Answer: millions of people died.

Question: 2. (i) Make a list of the wars fought between the Muslims and the Christians under the Crusades.

Answer: First Crusade, 1096–1099 CE — the Christians captured Jerusalem. Second Crusade, 1147–1149 CE — the Muslims remained successful. Third Crusade, 1189–1192 CE — under the leadership of Salahuddin Ayyubi the Muslims took back Jerusalem, then peace was made. Fourth Crusade, 1202–1204 CE — the Christians attacked Constantinople. (The book does not give a list of the individual Crusades; the exercise itself says to search an encyclopaedia or the internet, and this list comes from research as directed.)

Question: 2. (ii) How did the Umayyad rulers spread Islam?

Answer: The Umayyad rulers (661 to 750 CE) spread Islam through

conquests — the Islamic empire grew from Spain to Central Asia; through strong government and administration; and through trade and contacts Islam reached different countries.

Question: 2. (iii) Which factors caused the end of the government of the Abbasid dynasty?

Answer: The opposition of the non-Arab Muslims — they were treated as second-class citizens and more tax was taken from them; their revolt in 747 CE and the movement under the leadership of Abu al-Abbas; and the Mongol attack in 1258 CE, in which Baghdad was destroyed and the Abbasid government came to an end.

Question: 2. (iv) Which factors helped the Ottoman Empire to develop, to spread wars and to spread into half of Europe?

Answer: The Ghazis — brave horsemen who carried light weapons; the Janissaries — the best-trained army made from slaves obtained from conquered countries; a strong army and weapons; and the conquest of Constantinople in 1453 CE, after which the Ottoman Empire became a great power.

Question: B. Search in the library or on the internet and get information about the important events between Europe, Africa, Asia and America in the fifteenth century, and prepare a small chart.

Answer: This is a research activity; it has no single fixed answer. Complete it like this: write 2-3 important events for each continent (for example Europe: the conquest of Constantinople in 1453 CE; Asia: the Ottoman and Mongol empires; Africa: trade contacts; America: discovery of new regions); write them in a chart and present it in the library.

Question: C. 1. Working together in a group of four students, research the progress and contribution in art, architecture, literature, fine arts and science in the countries of fifteenth-century Europe, Africa, Asia and

America, and exchange information with the members of the group.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: the group members divide and collect information about the art, architecture, literature and science of each continent; then discuss together what effect the progress of Muslim science and art had on Europe.

Question: C. 2. Working together in a group of four students, research the progress of two other empires in the world, prepare a 3-D model of their progress, set up a temporary gallery in the school, and discuss their political, social, administrative, economic and military aspects and find the similarities and differences between them.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: choose two empires (for example Roman and Iranian); collect information on the five aspects (political, social, administrative, economic, military) of each empire; make a 3-D model and present it in the gallery; in the end discuss which things were the same and which were different in the two.

Unit 1 End Exercises

Question: 1. Make a timeline from the ancient world to the modern world highlighting the important events from Chapter 1 to Chapter 3 — from BCE to CE.

Answer: This is a practical activity; it has no single fixed answer. Make the timeline like this: 550 BCE — beginning of the Iranian Empire; 321 BCE — establishment of the Maurya Empire; 269 BCE — Ashoka became king; 320 CE — beginning of the Gupta Empire; 632 CE — beginning of Islam; 661–750 CE — Umayyad government; 750–1258 CE — Abbasid government; 1096 CE — beginning of the Crusades; 1258 CE — fall of Baghdad; 1453 CE — conquest of Constantinople.

Question: 2. Give reasons why you think the Royal Road helped Darius to maintain power over his people.

Answer: This is an opinion/reasoning activity; it has no single fixed answer. Give reasons like this: through the Royal Road, Darius's orders and army could quickly reach distant provinces; taxes and information could arrive quickly; trade grew and people's contact with the government became strong; therefore control over the large empire was maintained.

Question: 3. State reasons why you think the Iranian Empire was destroyed because of incapable rulers. Can you think of the government of another dynasty whose government was destroyed because of the incapability of its rulers?

Answer: This is an opinion/reasoning activity; it has no single fixed answer. Write reasons like this: in the period of weak and incapable rulers the governors began to revolt, taxes decreased, economic problems grew, and Alexander's attack ended the empire. Another example: the Gupta Empire

— after the death of Chandragupta II incapable rulers came, regions began to separate and the empire was destroyed.

Question: 4. Why do you think Zoroastrianism appeared in Iran as a religion? What were its true teachings?

Answer: This is an opinion/reasoning activity; it has no single fixed answer. Write the answer like this: people had questions about good and evil, suffering and problems in the world, and Zoroaster gave answers to those questions. True teachings: faith in one God, Ahura Mazda; a war between the spirits of good and evil is going on in the world and every person should support goodness; one should adopt good thoughts, good words and good deeds.

Question: 5. Show the battles fought during the Crusades on a timeline.

Answer: This is a practical activity; it has no single fixed answer. Make the timeline like this: 1096–1099 CE First Crusade; 1147–1149 CE Second Crusade; 1189–1192 CE Third Crusade (Salahuddin Ayyubi); 1202–1204 CE Fourth Crusade. (The book does not give a list of the individual Crusades; this list comes from research as directed by the exercise.)

Question: 6. On a map, describe the core of the Ottoman Empire and its spread from the fourteenth to the sixteenth centuries in the Middle East, North Africa and Europe.

Answer: Show the spread on the map like this: in 1326 CE a small empire began under a Turkish chief, Osman; in 1350 CE the Turks attacked Europe; in 1389 CE the Battle of Kosovo; in 1453 CE the conquest of Constantinople; then the empire spread to the Middle East (Syria, Iraq, Hijaz), North Africa (Egypt) and Eastern Europe (up to Hungary). (The book gives a map of the Ottoman Empire; this description comes from the book's material.)

Question: 7. Imagine that you are one of the people affected by the

Crusades; what will you do to obtain mutual agreement between the two sides?

Answer: This is an imaginative/opinion activity; it has no single fixed answer. For example: I would try to arrange talks between the leaders of both sides; I would stress respecting each other's religion and holy places; I would find a path to peace through trade and contacts; and I would support peace for the protection of the life and property of ordinary people.

Question: 8. Search in the library or on the internet and get information about the causes and factors as a result of which the Muslims declined in the fifteenth century, prepare a poster of these factors and exchange views with your friends.

Answer: This is a research activity; it has no single fixed answer. Make the poster like this: internal differences and weak governments; the Mongol attacks and the fall of Baghdad (1258 CE); change in trade routes; new scientific and military progress in Europe. The book mentions some of these causes (Mongol attacks, internal differences); the rest come from research.

Unit 2, Ch 1: The Constitution

1. (i) The basic, necessary and fundamental law of the state is _____.

Answer: are stated).

1. (ii) A representative government consists of three institutions, that is the executive, _____ and _____.

Answer: judiciary.

1. (iii) Sovereignty means _____.

Answer: Supreme authority (the sovereign is one who does not share his authority with anyone and whose orders cannot be objected to).

1. (iv) The Constitution of Pakistan consists of _____ articles.

Answer: 280 articles (it includes 12 parts and 6 schedules, and 23 amendments have been made in it so far).

Question: 2. I. Explain the rule of law in detail.

Answer: The rule of law means that no person is above the law: all citizens are equal before the law and all have equal protection of the law. According to the concept of Dicey, the world expert on law, the government too is bound by the law and no one can use authority according to his own will.

Question: 2. II. State the merits and demerits of an unwritten constitution.

Answer: Merits — an unwritten constitution is flexible and can change gradually according to the need of the time; it is based on customs, traditions and court decisions. Demerits — it is not written in one book, so the common man does not know about it; the government can use it according to its own will; and the protection of rights remains weak.

Question: 2. III. What is sovereignty?

Answer: Sovereignty means the supreme authority of the state. According

to the Constitution of 1973, Pakistan is a sovereign state; its authority is used through the elected representatives of the people and it has three institutions: the executive, the law-making body and the judiciary.

Question: 2. IV. Identify how the constitution protects fundamental rights including the freedom of citizens? State a suitable and relevant article to support your answer.

Answer: The constitution gives the citizens of Pakistan fundamental rights: equality before the law, freedom of thought, belief, faith and worship, and freedom to form associations. The condition is that these freedoms are not used against the rights of others and the law. (The book does not give specific article numbers for these rights, except Article 25-A which is in Chapter 2.)

Question: C. Cooperate with others. Work together in groups and prepare a booklet of rules and regulations for running the school council.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: the group members together write the rules of the council — how the members of the council will be chosen, when meetings will be held, how decisions will be made, what the duties of each member will be; write them in a booklet.

Question: B. Use your research skills. Keeping your past study in view, identify the powers and duties of the Supreme Court and the Parliament against the Constitution of 1973 and make a list of them: Supreme Court | Parliament.

Answer: Supreme Court — interprets and protects the constitution; protects the fundamental rights of the citizens; maintains the rule of law.

Parliament — makes laws for the country; it includes the National Assembly and the Senate; keeps watch over the work of the government.

(The book does not give the detailed powers of the Supreme Court; this

list follows the general material of the book and the direction of the exercise.)

Unit 2, Ch 2: Citizens' Rights and Responsibilities

1. (i) Civil rights are especially shared with a citizen's life and life.

1. (ii) According to Article 25-A of the Constitution, providing _____ to all children from the age of five (5) to sixteen (16) years has been declared the responsibility of the state.

Answer: Providing free and compulsory education.

1. (iii) Fundamental rights encourage and motivate a better life, _____ and _____.

Answer: equality (the book does not state, the literal answer to this sentence).

Question: 2. (i) What kinds of rights do citizens enjoy in a country?

Answer: Three kinds of rights: Civil rights — life, freedom, personal safety, property, freedom of expression and worship. Political rights — voting, forming associations, taking part in elections and becoming a candidate for public office. Economic and social rights — work, fair wages, education, health, housing and a decent standard of living.

Question: 2. (ii) What are the responsibilities of a citizen?

Answer: Supporting and defending the constitution; keeping informed about and being aware of matters affecting society; participating in the democratic process; respecting and obeying the laws; respecting the rights, beliefs and views of other people; participating in the local community; paying income and other taxes on time; respecting the state and local institutions; and defending the country when needed.

Question: 2. (iii) Why are there limits and restrictions on rights?

Answer: So that one person's right does not go against another person's

right and balance is maintained in society. For example, freedom of expression does not mean harming someone's honour; along with the use of every right, respecting the rights of others is also necessary.

Question: 2. (iv) State the reasons for contacting the elected representatives of your area.

Answer: To tell them what work they have done; to ask them to play a role in some activity; and to tell them one's views about education, crime, achievements and other problems of one's area. Ways of contact: writing a letter, going to meet them, phoning, or speaking in a gathering.

Question: 2. (v) State the procedure for promoting the strategy of legal consultation and advocacy.

Answer: The strategy of legal consultation and advocacy has nine steps: 1. Objective — what is to be achieved? 2. Audience — to whom is the message to be given? 3. Message — what will the message be for reaching the audience? 4. Messenger — who will deliver the message? 5. Delivery — what is the best way to deliver the message (insider or outsider strategy)? 6. Resources — which resources are needed? 7. Differences and concerns — which differences will have to be faced? 8. Beginning — how to start the work? 9. Assessment and evaluation — how is the work going and how to review it?

Question: 2. (vi) Identify two strategies of legal consultation and advocacy which you know and give examples of how they are used.

Answer: Insider strategy — direct contact with decision-makers: for example meeting one's representative and talking about the school's problem, or writing him a letter. Outsider strategy — through public pressure: for example taking out a peaceful rally, writing an article in a newspaper, or running a public campaign.

Question: B. Use your research skills. Find the rights enjoyed by the

citizens of the following countries: America | Britain | China.

Answer: This is a research activity; the book does not give a list of the rights of the citizens of these countries. Examples from research as directed: America — freedom of expression, religion and vote; Britain — freedom of expression, right to a fair trial, right to vote; China — right to education, work and vote (according to its constitution).

Unit 2, Ch 3: Role of Civil Society Organisations and Active Citizenship

1. (i) The person who works for an organisation without payment of any compensation is called _____.

Answer: A volunteer.

1. (ii) The basic role of a civil society organisation is to limit and regulate the authority of _____.

Answer: the state).

1. (iii) A volunteer plays an important role in the field of _____.

global economy).

1. (iv) A civil society organisation can provide a development field for future political _____.

Answer: leaders.

Question: 2. (i) Identify the roles and duties of civil society organisations.

Answer: Consultation and advocacy — their activities include running election campaigns, paving the way, direct action, media and public education. Charity and donations — giving financial aid to other organisations in support of democratic arrangements. Legal aid — providing legal help to individuals and organisations. Networking — establishing a system of contacts and exchange between people and organisations. Policy — taking part in making the policies of the organisations' aims and methods. Research — encouraging research on particular matters. Technical support — giving consultation and technical help for solving different problems. Training — giving training for the

development of people's special knowledge and skills.

Question: 2. (ii) Identify the motivations because of which people join civil society organisations and work together for the same purpose.

Answer: The book does not give a separate list of motivations; from the general material of the book the motivations are: the spirit of serving one's community and its welfare; the desire to protect rights; the desire to promote democracy and justice; and the desire to solve the problems of one's area together.

Question: 2. (iii) Explain the role of civil society organisations in participation for the welfare of the public.

Answer: Civil society organisations create awareness among the people about their rights and problems; they work as a link between the government and the people; they help poor and needy people; they take part in education, health and other services; and they press the government for solving public problems. That is why they play an important role in the welfare of the public.

Question: 2. (iv) Identify the three things which can be put into action for promoting volunteer activity in Pakistan.

Answer: This is a suggestions activity; the book does not give a fixed list of three things. For example: (1) starting volunteer programmes in schools and colleges; (2) running awareness campaigns and appreciating and rewarding the work of volunteers; (3) increasing contact and cooperation between volunteer organisations and the government.

Question: C. Cooperate with others. Work together in groups — some groups work on part "A", other groups on part "B", and then exchange information. "A" Write the names of civil society organisations (Scouts, Girl Guides, Youth Assembly in Pakistan). "B" Make a list of the works done by civil society organisations for promoting democratic values and awareness

in Pakistan: Name of organisation | Services/Work.

Answer: This is a group activity; it has no single fixed answer; the book does not give a list of the specific works of these organisations. The table can be filled like this: Scouts — training of youth, creating discipline and the spirit of service. Girl Guides — training of girls, self-confidence and service of the community. Youth Assembly in Pakistan — creating awareness of democratic values, leadership and public problems among the youth.

Question: B. Use your research skills. Research a civil society organisation, identify its aims and objectives, mark its aims and objectives in its activities, and assess its effects and exchange information with your friends.

Answer: This is a research activity; it has no single fixed answer. Complete it like this: choose one organisation (for example a welfare organisation of your area); write its aims (for example education of poor children); write its activities and see how they match the aims; in the end assess its effects (for example how many children benefited) and share with friends.

Unit 3, Ch 1: The Land of Asia

1. (i) The land area of Asia is _____.

Answer: 17,212,000 square miles.

1. (ii) The coastal area of Asia is _____ long.

Answer: about 62,800 kilometres

1. (iii) Ural is the name of a _____.

Answer: mountain range, which lies in the northern area between Russia and Kazakhstan.

1. (iv) The Arabian Peninsula is situated between _____ and _____.

Answer: the Red Sea, the Persian Gulf.

1. (v) The Karakoram mountain range is situated in _____ and _____.

Answer: Pakistan, China.

Question: 2. (i) Make a list of the mountains, plateaus and deserts of Asia.

Answer: Mountains — Altai, Tien Shan, Ghats, Ural, Zagros, Kunlun, Karakoram, Himalayas. Plateaus — Iranian Plateau, Deccan Plateau, Tibetan Plateau. Deserts — Gobi, Arabian, Thar, Karakum.

Question: 2. (ii) If you had to live in a coastal area, which country would you prefer between Britain and Bangladesh, and why?

Answer: This is an opinion question; it has no single fixed answer. Model answer: I would prefer Britain, because in Bangladesh there are heavy monsoon rains, floods and cyclones every year, and the rise in sea level causes great damage to its low-lying areas; Britain is also affected by the rise in sea level, but its damage is less than that of Bangladesh.

Question: 2. (iii) Explain the following terms: (a) plain and low-lying area (b) contour-line map (c) summer monsoon (d) aerial photograph.

Answer: (a) Plain and low-lying area: flat and low land, such as the plains along rivers and the low-lying areas along the sea (most of Bangladesh is like this). (b) Contour-line map: the map in which lines (contour lines) show the different heights of an area. (c) Summer monsoon: winds blowing from the sea towards the land in summer, which cause heavy rain. (d) Aerial photograph: a photograph taken from an aeroplane, which shows the shape of the land and buildings in greater detail.

Question: 2. (iv) The Arabian Desert and the Gobi Desert came into being in different ways — explain those ways.

Answer: The Gobi Desert is very far from the sea, so the sea winds cannot reach there; desert winds blow the sand about and the dryness increases every year. The Arabian Desert lies between the Equator and the Tropic of Cancer, where the sun's rays fall directly, so there is extreme heat there; there are small water stores there which cannot produce cool winds, so the land stays hot.

Carry out research. With the help of the internet, find the types of desert plants in Asia: (i) _____ (ii) _____ (iii) _____

Answer: Date palm tree, Cactus, Thorny bushes and grasses (such as lana and babul).

Question: Cooperate with others. Brazil is situated in South America — its dense forests are in danger. In a group of four students, search in newspapers or magazines about the efforts to protect these forests and share your information with the class.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: the group members search in newspapers and magazines for efforts to save the forests of Brazil (Amazon) — such as a ban on cutting forests, planting new trees, enforcing laws and protecting wildlife — and tell them to the class.

Unit 3, Ch 2: Interaction Between People and Countries

1. (i) The two most populous countries of the world, China and _____, are situated in Asia.

Answer: India is

1. (ii) The important agricultural crop in Bangladesh is _____ rice. .

1. (iii) Borneo is situated in _____.

Answer: South-East Asia (its area is divided between Malaysia, Indonesia and Brunei).

1. (iv) The capital city of Malaysia is _____ Kuala Lumpur. .

1. (v) _____ is a practical method of removing salt and minerals from salty water.

Answer: It

Question: 2. (i) Suggest ways to protect forests from cutting.

Answer: Stop the cutting of trees; plant new trees (carry out tree plantation); make laws for the protection of forests and enforce them; protect against forest fires; use other material instead of wood; keep the habitats of animals safe.

Question: 2. (ii) Write a statement on the economic activities of the Asian people living in the Arabian Desert.

Answer: The people living in the Arabian Desert rear camels, goats and sheep, and cultivate dates and other agricultural crops. The Bedouin tribes

travel for fodder and trade in far-off areas. In the modern age, the discovery of oil, means of transport, work in urban areas and the construction of buildings are also their important activities.

Question: 2. (iii) What do you know about climate change and its effects on the people of Asia?

Answer: Because of climate change the sea level is rising, which has increased the danger of coastal areas sinking and of floods; in some places there is heavy rain and floods, while in others there is drought; deserts are expanding; crops are destroyed, there is a shortage of water, and people's health is badly affected — low-lying countries like Bangladesh are affected the most.

Question: 2. (iv) In deserts water is scarce — what methods do the local people of deserts adopt to store water?

Answer: According to the book, the biggest natural source of the Arabian Desert is underground water. People take water from wells and oases, use water carefully and store it in pots/tanks; they collect rain water, and the method of making salty water sweet (desalination) is also used. (The book does not list separate storage methods, so this is a model answer based on the book's material.)

Question: 2. (v) If you were given the chance to settle in a place of your choice, where would you prefer to live and why? Exchange reasons.

Answer: This is an opinion question; it has no single fixed answer. Model answer: I would prefer to live in a coastal area with moderate weather, because there water, food and job opportunities are available, the weather is not too harsh, and facilities like schools and hospitals are nearby — but it is necessary to choose a safe place to be protected from floods and storms.

Question: Use your research skills. Complete the following table — analyse

the relations between people, places and environments: Physical features | Profession | Importance for local people | Role of government | Causes of rain at that particular place.

Answer: Desert — Profession: rearing animals and growing dates; Importance: animals and dates provide livelihood; Role of government: help in digging wells and supplying water; Causes of rain: being far from the sea and dry winds, so rain is very scarce. Forest — Profession: wood work and collecting forest produce; Importance: wood, fruit and medicines are obtained from the forest; Role of government: ban on cutting forests and protection; Causes of rain: many trees and humidity, so rain is plentiful. Coastal land — Profession: fishing and trade; Importance: fish and employment are obtained from the sea; Role of government: management of ports and coastal protection; Causes of rain: moist winds coming from the sea, so rain occurs. (This is a model filled table based on the book's material.)

Question: Cooperate with others. Imagine that you live in a dense forest — in what kind of forest would you prefer to live? What would be the economic activities of the people living there? Make a chart in a group and in it classify the natural things of the forest (land features, plants, animals and climate) and the human environments (cities, agricultural cultivation areas).

Answer: This is a group/imagination activity; it has no single fixed answer. Model answer: I would prefer to live in a dense forest with moderate weather, where water and wood are available; the people there do wood work, collect fruit and forest produce, and do a little farming. Chart: Natural things — flat/mountainous land, dense trees, wild animals, humid climate; Human environments — small villages, agricultural land, wooden houses, roads leading to the city.

Unit 3, Ch 3: Agricultural Water Uses and Effects

1. (i) The process in which water changes into vapour is called _____.

Answer: evaporation.

1. (ii) The process in which water flows over the surface of the earth is known as _____.

Answer: surface flow (surface runoff).

1. (iii) The three important sources of water in Pakistan are rain water, _____ and river water.

Answer: It is underground

1. (iv) _____ is the means of supplying water to the land by human hands for the growth of plants and farming.

Answer: It

1. (v) _____ is a process of facing bad weather conditions in which _____.

Answer: Weathering, rocks and minerals break up and scatter.

Question: I. Describe the process of the water cycle in your own words with examples.

Answer: The water cycle is the system in which water is always in motion. With the heat of the sun, the water of seas, rivers and lakes becomes vapour and rises up; in the cold air above, the vapour becomes clouds; from the clouds water falls on the land as rain or snow; some water flows over the surface of the land into rivers, some is absorbed into the land and becomes underground water, and in the end the water reaches back to the sea. Examples: vapour rising from the sea, rainfall, the flowing of a river, and water being absorbed into the land.

Question: II. How do floods occur? Suggest ways that can be adopted to

reduce the intensity of floods.

Answer: A flood occurs when water becomes too much on the land and cannot be contained in rivers or drains — heavy rain, extra water coming into rivers, cutting of forests and increase in urban population are its causes. Ways to reduce intensity: stop cutting forests and plant trees; repair and clean embankments and rivers; legal ban on construction in flood areas; a good drainage system for rain water; timely warning and safety preparation.

Question: III. How do people use water and make it dirty?

Answer: People use water for drinking, bathing, washing clothes, irrigation, industry, making electricity and recreation. Water becomes dirty when dirty water from homes, factory waste, rubbish, chemical substances and animal waste are thrown into rivers, lakes and seas — this is called water pollution.

Question: IV. Explain the following terms: (a) erosion (b) transportation (c) deposition.

Answer: (a) Erosion: the process in which water, wind or ice breaks rock and land and carries it from one place to another. (b) Transportation: the process of carrying broken rock and soil from one place to another through water or wind. (c) Deposition: when the flow of water becomes slow, the carried material collects at another place — for example soil collecting at the bank of a river and forming a delta.

Question: V. Compare the following: Upper course | Middle course | Lower course.

Answer: Upper course — in high mountain areas, water flows fast, the valley is narrow and V-shaped, waterfalls form. Middle course — the flow becomes gentle, the valley becomes wide, flood plains and bends of the river form, soil starts collecting. Lower course — the flow becomes very

slow, the river becomes wide and deep, much soil collects, deltas and lakes form.

Question: Use your research skills. On the internet, trace those countries in Asia which are affected by the following natural disasters: Serial number | Flood | Cyclone.

Answer: This is a research activity; it has no single fixed answer. Model filled table based on the book's material: 1. Flood — Pakistan (the great flood of 2010); Cyclone — Bangladesh (storms and floods of the Bay of Bengal). 2. Flood — China (floods in rivers); Cyclone — India (storms in coastal areas).

Unit 3, Ch 4: People on the Move - Migration and Settlements

Question: i. Briefly explain the differences between voluntary and forced migration.

Answer: In voluntary migration people move from one place to another of their own will — for example for better employment, education or a better standard of living. In forced migration people leave home under compulsion — for example because of war, natural disaster, oppression or pressure from the government.

Question: ii. What is the difference between forced migration and a refugee?

Answer: Forced migration is the process in which people leave their home under compulsion (inside the country or outside it). A refugee is that person who leaves his own country because of war, oppression or fear and takes shelter in another country — every refugee is a forced migrant, but every forced migrant is not a refugee (some people become homeless inside their own country).

Question: iii. Discuss in detail why refugees are forced to leave their homes?

Answer: Refugees are forced to leave their homes because: (1) war and fighting become a danger to their lives; (2) they have to face oppression and fear because of their race, religion or political views; (3) the government or armed groups force them to leave home; (4) sometimes natural disasters (floods, drought) also force them to leave home.

Examples: the migration between Pakistan and India in 1947, and the migration of millions of people to Pakistan and Iran because of the war in Afghanistan.

Fill in the blanks with suitable words. (i) _____ is the change from village life towards city life.

(a) Globalisation

✓ (b) Urbanisation

(c) Education

(d) Desertification.

Fill in the blanks with suitable words. (ii) A single urban centre which attracts people, resources and wealth towards itself is a _____.

(a) Megalopolis

✓ (b) Growth pole

(c) Ancient city

(d) Scattered town.

Fill in the blanks with suitable words. (iii) In East Asia, population is found in _____.

✓ (a) River valleys and coastal plains

(b) Mountain ranges

(c) Plateaus

(d) Deserts.

Question: Use your research skills. Interview a person who has migrated from one place to another (for example from one country to another country, or from a rural area to an urban area) — collect information by forming a series of questions, including the pull and push factors, and present a written report.

Answer: This is a research/interview activity; it has no single fixed answer. Complete it like this: choose a person who has migrated; ask him — (1)

From where to where did you migrate? (2) What was the reason for migrating? (3) What difficulties did you face on reaching the new place? (4) What facilities did you get at the new place? Then arrange the answers and write a short report, and tell which were the pull factors (jobs, facilities) and which were the push factors (poverty, war, disaster).

Question: Using the map of Sindh, find one city, two towns and three villages. Write the names of the settlements in the following table and also write the names of the facilities provided in each settlement: Name of city | Facilities provided; Names of towns | Facilities provided; Names of villages | Facilities provided.

Answer: This is a map activity; its answers will depend on the student's own map and area. Model filled table: Name of city — Karachi; Facilities provided — schools, hospitals, electricity, water, roads, market, seaport. Names of towns — (1) Hyderabad (2) Sukkur; Facilities provided — schools, hospital, electricity, water, bazaar, roads. Names of villages — choose three villages from your own map (for example villages of your own taluka); Facilities provided — primary school, mosque, well/water, unpaved/paved roads, agricultural land.

Unit 4, Ch 1: Demand (Consumer-Focused View)

1. (i) When the price increases, the quantity demanded falls). .

1. (ii) The two basic types of demand are _____ and market demand. .

1. (iii) The diagrammatic presentation of a demand schedule is called _____.

Answer: curve.

Question: 2. Make a table with three columns. In column A write a list of goods/services. With each good/service, write its complementary good in column B and its substitute good in column C. | A: Goods/Services | B: Complementary | C: Substitute |

Answer: This is a model completion; it has no single fixed answer. The table can be filled like this: Tea — complementary: sugar, milk; substitute: coffee. Mobile phone — complementary: SIM, charger; substitute: landline phone. Pen — complementary: ink/copy; substitute: pencil. Car — complementary: petrol; substitute: motorcycle/bus. Shoe — complementary: socks/polish; substitute: slippers.

Question: 3. (i) Explain the term "consumer demand" and give three examples.

Answer: Consumer demand describes a consumer's desire to buy a particular good or service at a particular price, together with the ability to pay for it and the intention to pay. Examples: Asif buying a pen for 10 rupees; a household's demand for sugar; students' demand for books.

Question: 3. (ii) Explain the term "income" with examples.

Answer: Income is the amount of money a person receives on a regular

basis as payment for their work. Examples: the wage a factory worker receives at the end of the month; a shopkeeper's profit; a farmer's money from selling the crop.

Question: 3. (iii) Explain the term "complementary goods". When the price of a good falls, what happens to the demand for its complementary good?

Answer: Complementary goods are goods that are used together with each other. When the price of one good falls, the demand for the other (complementary) good also increases. Example: if the price of tea falls, people buy more tea, and the demand for sugar for the tea also rises, even though the price of sugar has not changed.

Question: 3. (iv) Explain the term "substitute goods". When the price of a good rises, what happens to the demand for its substitute good?

Answer: Substitute goods are goods that consumers can use in place of each other for the same purpose. When the price of one good rises, the demand for its substitute good increases. Example: if the price of butter rises, people buy margarine instead, because margarine is cheaper than butter; if the price of tea rises, the demand for coffee rises.

Question: 3. (v) Identify five non-price factors that affect demand.

Answer: (1) Change in population; (2) Change in tastes and preferences; (3) Change in income; (4) Change in the price of substitute goods; (5) Season and weather conditions. (The book also gives other factors: expected price, fear of shortage, change in fashion, prestige-value goods.)

Question: 4. Ask five students how they will spend their pocket money on their favourite food (drink) which they buy daily, if there is a sudden increase in its price? Ask them to tell you what they will do if there is a sudden increase in the price of their favourite item. Afterwards, write a short paragraph to describe their response to the estimate of the price in their answers.

Answer: This is a survey activity; it has no single fixed answer. Complete it like this: ask five students about their favourite daily food and its price; ask whether, if the price rises, they will buy less, buy a substitute, or buy the same amount; write their answers and in the end write a short paragraph saying that when the price rises most students reduce demand or move to a substitute (in line with the law of demand).

Question: 5. (i) At the time of buying her monthly household goods, Manzha notices that the price of coffee has fallen. Therefore she decides to buy two bottles of coffee instead of buying two packets of tea. Why did Manzha do this?

Answer: Because tea and coffee are substitute goods. When the price of coffee fell, Manzha switched to the cheaper item (coffee) and increased her demand for coffee instead of tea.

Question: 5. (ii) At the time of buying a special brand of powdered milk (which his daughter drinks), the shopkeeper informs Asad that a shortage of that powdered milk is expected in the near future. Asad becomes a little worried because that milk is not cheap. What will he do? Will its quantity demanded increase, remain the same or decrease? Why?

Answer: Asad will buy more milk; his quantity demanded will increase.

Reason: fear of shortage — he fears that the milk will not be available in the coming time, so he buys more in advance, even though its price is high. (This is the case where expected shortage increases demand.)

Question: 5. (iii) There is a sudden increase in the demand for butter, although no change has occurred in its price. Three different people are showing their reasons. A student can ask about one demand and can ask each one about the reasons for buying more butter. Can you tell another reason?

Answer: Yes. Apart from the three possible reasons given in the book,

other reasons are also possible: (1) one person can say that since my income has increased, now I can afford to buy butter; (2) the second person's reason can be that the price of margarine has increased and now butter, which is a substitute for margarine, has become cheaper; (3) a third person's reason can be that the price of butter is expected to increase in the near future, so he is buying more butter now. Another possible reason: a change in people's taste/preference, or a change of season/fashion.

Question: Activity: From the given price and quantity demanded data, make a demand schedule, then draw an individual demand curve from it. Data: a consumer buys 1 packet of biscuits at Rs. 7, 2 at Rs. 6, 4 at Rs. 5, 7 at Rs. 4, 11 at Rs. 3, 16 at Rs. 2 and 23 at Re. 1.

Answer: This is a practical activity; it has no single fixed answer. Make the demand schedule like this: | Price (Rs.) | Quantity demanded (packets) | 7 | 1, 6 | 2, 5 | 4, 4 | 7, 3 | 11, 2 | 16, 1 | 23. Then draw the demand curve: put quantity demanded on the X-axis and price on the Y-axis, join the seven points above — the curve slopes down from left to right, because as the price falls the quantity demanded rises. (This confirms the law of demand.)

Question: Activity: Think of a few more examples of complementary goods. Write at least three more pairs and discuss them with your friends.

Answer: This is an opinion activity; it has no single fixed answer. Three model pairs can be written like this: (1) Tea and sugar — without tea the demand for sugar falls; (2) Pen and ink — ink is needed along with the pen; (3) Motorcycle and petrol — a motorcycle does not run without petrol. Discuss with friends what effect a rise in the price of one has on the demand for the other.

Question: Activity: Think of a few more examples of substitute goods.

Write at least three more pairs and discuss them with your friends.

Answer: This is an opinion activity; it has no single fixed answer. Three model pairs can be written like this: (1) Tea and coffee — a rise in the price of one increases the demand for the other; (2) Butter and margarine — both serve the same purpose; (3) Bus and rickshaw — for travel, one can be used instead of the other. Discuss with friends what effect a rise in the price of one has on the demand for the other.

Unit 4, Ch 2: Supply (Producer-Focused View)

1. (i) The person who produces economic value or goods and services is called _____.

Answer: A producer.

1. (ii) If there is progress in the technology of production of goods, there will be _____ in its supply.

Answer: increase).

1. (iii) A _____ presents the relation between the price of a good or service and the quantity supplied for the stated time through a schedule.

Answer: supply

Question: 2. Make a table/graph. The following table presents a supply schedule for a DVD: Price (in rupees) 50, 100, 150, 200, 250 | Quantity supplied 1, 5, 9, 13, 17. Form a supply curve from this material for an individual producer.

Answer: In the table, as the price rises the quantity supplied also rises (1 at 50 rupees, 17 at 250 rupees) — this is a direct relation between price and supply. Draw the supply curve like this: put quantity supplied on the X-axis (horizontal) and price on the Y-axis (vertical); mark the five points (1, 50), (5, 100), (9, 150), (13, 200), (17, 250) and join them — an upward-sloping supply curve going from below upwards is formed.

Question: 3. (i) Explain the term "producer" and give three examples.

Answer: A producer is the person who produces and provides goods or services, and sells them to consumers, governments or other firms.

Examples: a farmer growing wheat; a factory making cloth; a firm making shoes. (The government is also a producer of services, such as police, defence and government schools.)

Question: 3. (ii) Explain the term "incentive" with examples.

Answer: An incentive is something that moves a person to perform an action or encourages them. In economics it is understood as a payment or incentive concession for greater production or greater investment. Examples: awards given to employees, bonuses, increase in salary, certificates and praise.

Question: 3. (iii) Explain the term "supply". When the price of a good falls, what happens to its supply?

Answer: Supply is a basic economic concept which describes the total quantity of a particular good or service that is available to consumers. When the price falls, supply also falls — producers offer a smaller quantity, because at a lower price the profit is also less.

Question: 3. (iv) Explain the terms "revenue" and "profit". Explain the distinction between the two.

Answer: Revenue = unit price × quantity sold (number of units/quantity sold). Profit is the reward a producer gets for taking a risk — it is obtained when the revenue from selling the stated quantity of production exceeds the total cost of those goods/services. Difference: Total profit = Total revenue − Total expenses. That is, revenue is the total income, and profit is the amount left after deducting expenses from it.

Question: 3. (v) Identify three non-price factors that affect supply.

Answer: (1) Cost of production/production expenses; (2) Price of related goods; (3) Productive capacity. (The book also gives other factors: technology, the seller's expectations.)

Question: 3. (vi) There is a relation between the price of production and the quantity supplied (that is, an increase in the price of a good in the market increases the quantity supplied). Depending on this state of relations (other things remaining the same), make a list of any three

conditions.

Answer: (1) There is no change in the price of related goods; (2) There is no change in the factors of production; (3) There is no change in technology. (The book also gives other conditions: there is no change in government policy; there is no change in the seller's expectations about future prices.)

Question: 4. Ask five students how a producer of a good X will react to changes in the price of the good (and why), which he himself produces. That is, if there is a sudden increase in the price of X or a decrease in it? Write your answers and exchange them with the classmates.

Answer: This is a survey activity; it has no single fixed answer. Complete it like this: ask five students what they would do if they made a good (for example a DVD) and its price rose — most will say they would produce more, because at a higher price more profit is earned; if the price falls they would produce less. Write the answers and exchange them in the class.

Question: Activity: Were you ever given a positive incentive (reward) to encourage a particular activity?

Answer: This is a personal-experience activity; it has no single fixed answer. It can be written like this as a model: Yes, when I got good marks in the examination, the teacher praised me and my family gave me a book as a gift; that reward encouraged me to work harder. Every student should write his or her own true experience.

Question: Activity: Were you ever given a negative incentive (punishment) to discourage a particular activity?

Answer: This is a personal-experience activity; it has no single fixed answer. It can be written like this as a model: Yes, once I did not do my homework, so the teacher made me stand in the class and I felt ashamed;

after that punishment I started doing my homework on time. Every student should write his or her own true experience.

Question: Activity: Ask at least five classmates the following questions and write your answers in a table like the one below. | What was the incentive? | Who gave you that incentive? (Your mother, father, teacher, etc.) | What was the activity which that person wanted to encourage? | Did the incentive work (did that person succeed in changing your behaviour?)

Answer: This is a survey activity; it has no single fixed answer. The table can be filled like this: (1) Incentive: a new bag for good marks; giver: mother; activity: hard work in studies; result: yes, I worked harder. (2) Incentive: stopping play; giver: father; activity: doing homework on time; result: yes, I did the work on time. (3) Incentive: praise and a star; giver: teacher; activity: silence in class; result: yes, I kept quiet. (4) Incentive: promise of sweets; giver: grandmother; activity: helping the younger brother; result: yes. (5) Incentive: not allowed to watch TV; giver: mother; activity: sleeping on time; result: yes. Take true answers from five classmates and fill the table.

Question: Activity: Using the data on the price and quantity supplied of good (A) given in the supply schedule below, draw a supply curve for an individual producer. | Price of good (A) (Rs. per kg) | Quantity supplied of good (A) | 50 | 35, 45 | 31, 40 | 27, 35 | 23, 30 | 19, 25 | 15

Answer: This is a practical activity; it has no single fixed answer. Draw the supply curve like this: put quantity supplied on the X-axis and price on the Y-axis; plot the points (15, 25), (19, 30), (23, 35), (27, 40), (31, 45), (35, 50) and join them — the curve rises from left to right, because as the price rises the quantity supplied also rises. (This confirms the law of supply.)

Question: Activity: Can you name any other factor(s) that can affect supply?

Answer: This is an opinion activity; it has no single fixed answer. Apart from the five factors given in the book, other factors can be written like this: (1) Weather and natural disasters — good rain increases the crop, flood or drought reduces supply; (2) Taxes and subsidy — a rise in tax makes production costly and reduces supply, subsidy increases supply; (3) Workers' strike or law-and-order situation — factories closing reduces supply; (4) Availability of transport and electricity — shortage of electricity stops production.

Unit 5, Ch 1: Gaining Group Leadership and Practical

Exercise

1. (i) A democratic leader is a leader who _____ in the decision-making of the people.

Answer: Participates (includes others

1. (ii) Absolute leaders make decisions _____ without the _____ of people.

Answer: According to their own choice, advice

1. (iii) People are naturally divided into Leaders and followers. .

Question: 2. (I) Tell about the possible ways through which people can become leaders?

Answer: (1) Heredity — leadership passes in a family from one generation to another; (2) Power — a person gains leadership by using power (force); (3) Appointment — a leader is appointed for a particular purpose; (4) Elections — the people choose a leader through votes; (5) Voluntary action — people guide others of their own will for the good of others.

Question: 2. (II) How do the different models of leaders affect the members of the group?

Answer: An absolute leader makes decisions according to his own choice without the advice of others and keeps complete authority with himself. A democratic leader plays an active role in decision-making and also includes others in decisions, encourages them and gets them to express their ideas. A leader who gives freedom of choice and activity gives people

the freedom to work according to their own choice with the least interference.

Question: 2. (III) What should leaders do to prevent differences between and within groups?

Answer: (1) Remain silent and show honour and respect — look at others' point of view with respect; (2) Enforce reasonableness and become agreed — clarify the facts and bring the groups to a conclusion; (3) Think creatively and use authority or power — search for a better solution to the problem and use their authority when needed.

Question: 3. Use your research/investigation skills. Conduct a research about the causes of conflicts and differences which exist in the people living near you. In addition, search for the possible solutions of those conflicts/problems. | Serial No. | Conflict/Problem | Possible Solution |

Answer: This is a research activity; it has no single fixed answer. Complete it like this: choose two or three conflicts in your neighbourhood or class (for example: a quarrel over the playing place, a difference over the distribution of water, a difference over cleanliness); write the cause of each conflict; then, in the light of the book's three methods (remaining silent and respect, reasonableness and agreement, creative thinking), write a possible solution for each.

Question: 4. Cooperate with others. Work together in a group of 4-5 students and prepare a display advertisement about the importance of leadership in your society and present it before the class.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: the group members together write the points of the importance of leadership — leadership helps people to do the right work at the right time, leaders show the way, make a plan and take the group towards the destination; write these points on a chart/advertisement and present it in

the class.

Question: Activity: Can you think of the problems that could arise if there were no leader in a society? Think about the benefits of having a leader (monitor) in your class.

Answer: This is an opinion activity; it has no single fixed answer. It can be written like this: If there were no leader in a society, no decision would be taken, everyone would do as they pleased, quarrels would increase and work would stop. Benefits of having a monitor in the class: he or she keeps discipline in the class, manages the class in the teacher's absence, conveys the students' problems to the teacher and teaches everyone to work together.

Question: Activity: Identify the leadership style of your class monitor. In what way is his or her style affecting your classmates? In what way did he or she become the representative of your class? You can think of an idea from the tables above.

Answer: This is an opinion/observation activity; it has no single fixed answer. It can be written like this as a model: Our monitor is a democratic leader — he or she takes everyone's opinion and decides together; therefore classmates obey him or her and cooperation in the class has increased. He or she became the representative because he or she is responsible, honest and fair to everyone; the teacher and the students chose him or her.

Question: Activity: Work together in groups and find more ways to resolve conflicts and problems that leaders can adopt to remove differences between groups.

Answer: This is a group activity; it has no single fixed answer. Apart from the three ways given in the book, more ways can be written like this: (1) Listen to both sides separately and write down their complaints; (2) Make

peace through a mediator; (3) Make common rules on which everyone agrees; (4) Encourage admitting mistakes and asking for forgiveness; (5) Increase friendship through a joint game or joint work.

Unit 5, Ch 2: Organised Speech of Asian Peoples and Response to Crises

1. (i) Women have a role to play in every society as a _____ nation builder. .

1. (ii) Countries are producing educated youth in large numbers, but they lack basic skills and _____.

Answer: Practical training.

1. (iii) People start cutting trees and destroying forests to obtain _____ and to _____ for the people.

Answer: land, provide residential facilities

Question: 2. (I) State how groups and individual people can work together to cope with difficulties in Asian countries.

Answer: Through the problem-solving cycle: (1) Identifying — recognising the problem; (2) Gathering information and creating ideas; (3) Selecting the best idea; (4) Strengthening and testing the idea; (5) Evaluating the results and determining their value. In addition, groups, the government and civil organisations work together and help one another.

Question: 2. (II) Find the ways by which the shortage of water and the cutting of forests can be ended.

Answer: For the shortage of water: building dams and reservoirs, saving water, telling people about the proper use of water, keeping rivers, seas and fishermen clean. For the cutting of forests: protecting trees, planting trees, informing people about the importance of trees, and cooperating with the government in this work.

Question: 2. (III) Give reform suggestions to prevent the energy crisis in Sindh.

Answer: The book does not give specific solutions for the energy crisis of Sindh — this answer is a model based on the general points of the chapter of the book, not copied book material. Model suggestions: saving electricity and stopping its wastage; using new sources of electricity (solar energy, wind energy); stopping electricity theft; energy-saving habits in industry and homes; the government and the people working together.

Question: 3. Use your research/investigation skills. Search on the internet for information about the socio-economic, political, cultural and technical crises in the five regions of Asia.

Answer: This is a research activity; it has no single fixed answer. Complete it like this: choose the five regions of Asia (South-East Asia, South Asia, West Asia, Central Asia, East Asia); find information from the internet or newspapers about one or two crises of each region — for example lack of education and unemployment in South Asia, shortage of water in West Asia; write them and tell the class.

Question: 4. Cooperate with others. Work together and divide the regions of Asia among groups of 5-6 students. Each group should work on the solution of the difficulties and crises listed in each region of Asia. Each group should prepare an advertisement for display on the assigned work and present it before the class.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: divide the class into five groups, give one region to each group; each group writes two big problems of that region (for example shortage of water, unemployment, lack of education) and their solutions on a chart/advertisement; each group presents its advertisement in the class.

Question: Activity: Find the countries which are located in the continent of

Asia and exchange them with your classmates. You can also take help from the map on the previous page. | Names of countries located in the continent of Asia | South-East Asia | South Asia | West Asia | Central Asia | East Asia |

Answer: This is a research activity; it has no single fixed answer. The table can be filled like this: South-East Asia — Indonesia, Malaysia, Thailand, Vietnam, Philippines; South Asia — Pakistan, India, Bangladesh, Nepal, Sri Lanka, Afghanistan, Bhutan, Maldives; West Asia — Saudi Arabia, Iran, Iraq, Turkey, Syria, Jordan; Central Asia — Kazakhstan, Uzbekistan, Kyrgyzstan, Tajikistan, Turkmenistan; East Asia — China, Japan, Korea, Mongolia. Match with the map and exchange with classmates.

Question: Activity: Examine the diagram below. You see how people are trying to solve problems. Find the problems faced by individuals in your area and identify how people are trying to solve them. The diagram below will help you find problems and try to solve them. (Problem-solving cycle: 1. Identification, 2. Gathering information and researching ideas, 3. Selecting the best idea, 4. Strengthening the idea and testing it, 5. Evaluating results and determining value)

Answer: This is a research/observation activity; it has no single fixed answer. Complete it like this as a model: Problem — there are heaps of rubbish in our street. (1) Identification: the street is dirty and smells bad; (2) Information: people throw rubbish in the street, there is no dustbin; (3) Best idea: keep a dustbin in every house and a cleanliness campaign; (4) Testing: run a cleanliness campaign for one week; (5) Evaluation: if the street becomes clean, the method is successful. Write a true problem of your own area.

Question: Activity: Work together in groups of 4-5 students and identify the crises in your area and school, and find the groups which are responsible

for dealing with those crises. | Crisis | Group dealing with the crises |

Answer: This is a group/research activity; it has no single fixed answer. The table can be filled like this: Crisis: shortage of water in school — responsible group: school administration and municipal body. Crisis: rubbish and diseases in the street — responsible group: cleaning staff and health department. Crisis: load-shedding of electricity — responsible group: electricity company. Crisis: quarrels in school — responsible group: teachers and parents. Write the true crises of your own area.

Unit 5, Ch 3: Organisation of Asian Society: Rights and Responsibilities

1. (i) According to the international standard, a person whose age is _____ years has the right to cast his vote in elections.

Answer: 18 years.

1. (ii) When a child reaches the required age for going to school, he can exercise the right of _____.

Answer: education (educational rights).

1. (iii) In a society, a minority can be on the basis of nation, religion and _____.

Answer: race (ethnic basis).

1. (iv) Political parties identify the _____ of the people and express them again and again and present their manifesto in their context.

Answer: The interests.

Question: 2. (I) What are the different rights and responsibilities of people during different age periods?

Answer: Rights of children: education, protection, health, playing and receiving love; responsibilities of children: studying, obeying parents and teachers, following the rules of the school. Rights of adults: voting (at the age of 18), employment, expressing their own opinion; responsibilities: following the law, serving the country, respecting the rights of others. Rights of elderly citizens: respect, care and protection; responsibilities: guiding the youth.

Question: 2. (II) How can rights be implemented in a society?

Answer: Rights are implemented when people know about their rights and responsibilities, respect them and follow the law. The government and the organisations of civil society work together and make such policies that girls too, like boys, can get basic education without any discrimination. Every citizen should become aware of their rights, respect the rights of others and work for the betterment of the country.

Question: 2. (III) Which factors shape the responsibilities of people?

Answer: (1) Economic factors; (2) Cultural factors; (3) Factors related to age and status; (4) Religious factors. These factors determine what a person's responsibility will be and how he fulfils it.

Question: 2. (IV) Why do individuals and groups in some Asian countries hold different views about the organisation of society?

Answer: Because the people of Asian society are organised in different groups and have their own ideas, interests and aims. Among them there are clear cultural differences in language, dress, traditions and ethics. When individuals and groups put their own individual aims ahead of the collective aims of society, problems like intolerance, bribery, unbalanced economy and child labour arise in society.

Question: 3. Use your research/investigation skills. Compare any five rights and distinguish between them, which children and elderly citizens have in Sindh. | Rights of children | Rights of elderly citizens |

Answer: This is a research activity; it has no single fixed answer. Complete it like this: Rights of children — free and compulsory basic education, protection and care, health facilities, playing and rest, protection from exploitation. Rights of elderly citizens — honour and respect, family care and support, health facilities, economic protection (pension/help), participation in social life. Similarity in both: both have the right to honour, protection and health; difference: the special right of children is education,

while the special right of elderly citizens is care and economic support.

Question: 4. Cooperate with others. With the help of your classmates, teachers and family members, identify the following groups in your area or city. | Group | What do they want in society? | What new problems do they create in society? | How should they be organised in society? | (Rows: Social group, Groups with common interests, Political parties, Minority group, Community group)

Answer: This is a survey/group activity; it has no single fixed answer. The table can be filled like this: Social group — want: betterment of their area; problems: sometimes differences; organise: through joint discussion. Groups with common interests — want: the interests of their members; problems: clash with other groups; organise: through law and discussion. Political parties — want: the authority of government and implementing their manifesto; problems: political clash; organise: through elections and the constitution. Minority group — want: equal rights and protection; problems: feeling of discrimination; organise: through equal rights and respect. Community group — want: the identity and interest of their community; problems: community bias; organise: through equality and brotherhood.

Question: Activity: In the table below, classify the rights and responsibilities of children, adults and elderly citizens, and prepare a list. | Rights of children | Responsibilities | Rights of adults | Responsibilities | Rights of elderly citizens | Responsibilities |

Answer: This is a classification activity; it has no single fixed answer. The list can be made like this: Rights of children — free education, protection, health; responsibilities — studying, respect for elders, obeying school rules. Rights of adults — working, voting, expression of opinion; responsibilities — obeying the law, paying tax, care of the family. Rights of

elderly citizens — respect, health facility, pension; responsibilities — guiding the youth, teaching from experience.

Question: Activity: (Fill in the table below) Arrange an interview with an educated person / member of a social organisation of your neighbourhood or area and ask about the given factors which form responsibilities and how those responsibilities can be fulfilled. | Factors | Responsibilities | Ways of fulfilling responsibilities | (Rows: Economic, Cultural, Related to age and status, Religious)

Answer: This is an interview activity; it has no single fixed answer. The table can be filled like this: Economic — responsibility: support of the family; fulfilment: working honestly. Cultural — responsibility: respect for one's own culture; fulfilment: taking part in festivals and traditions. Related to age and status — responsibility: respect for elders and care of the younger ones; fulfilment: speaking politely and helping. Religious — responsibility: worship and truthfulness; fulfilment: daily worship and speaking the truth. Write the true answers of the interview.

Question: Activity: Working in groups, identify the viewpoints of the following groups in your area. | Group | Viewpoint | (Rows: Political parties, Minority group, Civil society organisations, Groups with common interests)

Answer: This is a group/observation activity; it has no single fixed answer. The table can be filled like this: Political parties — viewpoint: our manifesto is best for the development of the area. Minority group — viewpoint: we should get equal rights and protection. Civil society organisations — viewpoint: public problems should be solved in a legal and peaceful way. Groups with common interests — viewpoint: the interests of our members come first. Write the true viewpoints of your own area.

Question: Activity: Find problems with different viewpoints instead of the problems given above. | Different ideas / viewpoint | Results | (The four

problems given above: intolerance, bribery, child labour, unbalanced economy)

Answer: This is an opinion activity; it has no single fixed answer. The table can be filled like this: Different viewpoints: one person says that giving a bribe gets the work done quickly, another says that bribery is forbidden and illegal — result: bribery creates injustice and distrust in society. Different viewpoints: one person says that making children work increases the family's income, another says that children have the right to education — result: child labour destroys the future of children. Write your own examples.

Unit 6, Ch 1: Support Skills

Question: 1. In groups of 4 to 6 students, read both scenarios carefully, place them in the "suitable" or "unsuitable" column, and write where each scenario took place. While choosing, give reasons — was the choice made because of the proposed activity, technology or the teacher's role? In the end write a note about the groups' agreement and disagreement.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: the first scenario (the activity given by the doctor, students asking each other questions and giving answers) shows shared learning and cooperation; the second scenario (five students sitting around a table preparing for the history exam, sharing the book, notes and mobile pictures) shows group study and use of technology. Place each scenario in the suitable column, write where it took place, and give reasons.

Question: 2. Recall within the group the reasons for the scenario you placed in the "unsuitable" column. What change would be needed to move it to the other column? Who can bring that change? Is it desirable? Give a critical opinion on the scenario along with the answers to these questions.

Answer: This is a discussion/opinion activity; it has no single fixed answer. Complete it like this: write the reasons for the scenario declared unsuitable (for example: lack of cooperation among students, or wrong use of technology); then write what change could make that scenario suitable (for example: every student taking part, guidance by the teacher); and write that the teacher and students together can bring that change and that it is desirable.

Question: 3. As a group, examine each scenario and discuss how it would have looked if it had happened like a stage of your own educational

activity. Write a note on the differences — this activity is a "possible future story" for changing the scenario, which you would hope to see in your classroom.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: compare each scenario with the activity of your own classroom; write what would have been different in your class (for example: participation of all students, availability of resources); and write what better form you would like to see in the future.

Question: 4. Make a sketch of four boxes — in each box write "Resources", "People", "Activities" and "Process". For each scenario, using a coloured pen, write all the records for which rules need to be brought in your activity to make that scenario a reality. Give your answers under three headings: Which new resources are needed (study material, resources, digital technology)? Which new roles need to be implemented? What are the important changes in your activity?

Answer: This is a group activity; it has no single fixed answer. Fill the sketch like this: Resources — book, notes, mobile/tablet, board; People — students, teacher, group leader; Activities — asking questions, discussion, sharing notes; Process — working together, listening to each other, respecting opinions. New resources: study material and digital technology; New roles: the active role of every student and guidance by the teacher; Important changes: participation of all and punctuality.

Unit 6, Ch 2: Problem-Solving and Decision-Making

Skills

Question: 1. Read an article about poverty in your newspaper and guide the discussion: What are your views about the people who are responsible for solving this problem? (Predict that government institutions, community organisations and the poor people themselves are also included in these answers.)

Answer: This is a discussion/opinion activity; it has no single fixed answer. Complete it like this: make a list of the signs and causes of poverty from the newspaper article; then discuss whose responsibility it is — the government's (policies and jobs), the community organisations' (help and training) and the poor people's own (hard work and learning) — everyone has their own role.

Question: 2. Present your assumptions. (For example: the most effective solution to the problem of poverty is that the poor people help themselves.)

Answer: This is an opinion activity; it has no single fixed answer. An assumption can be written like this: "The most effective solution to the problem of poverty is that poor people get education and training so that they can help themselves" — then give arguments for and against it in the class.

Question: 3. Divide the class into three separate sub-committees and study the different solutions to the problem of poverty: the first committee investigates how poor people can improve their condition through

education and re-training programmes; the second committee investigates what volunteer groups (including religious organisations, non-government organisations and business organisations) can do through charity or better employment opportunities; the third committee investigates the existing government poverty-eradication programmes and new proposals, including legislation about civil rights.

Answer: This is a group research activity; it has no single fixed answer. Complete it like this: each committee collects material on its topic — first: benefits of education and training; second: examples of help by volunteer groups; third: a list of government programmes and laws — and each committee presents its results before the class.

Question: 4. Reorganise the class and ask each sub-committee to present its research report in documentary form, showing which is the most practicable and test-worthy alternative for solving the problem of poverty. Instruct one reporter student to write those statements on the board, and ask each group to tell how it will test those assumptions.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: each committee writes and presents its report; the class together decides which solution is most practicable; the reporter writes the important points on the board; each group tells the way to test its assumption (for example: a survey in the school, interviews with people).

Question: 5. (Additional activity) To collect material about your four topics, take interviews from people related to the brotherhood/neighbourhood or write letters, and use some class time to obtain information. After collecting the material, think about the possible solutions, then exchange views in the class about which solution is most effective. Only one or two weeks' time can be spent on the whole project.

Answer: This is a research activity; it has no single fixed answer. Complete

it like this: take interviews from people of your neighbourhood/community or write letters; make a list of possible solutions from the information obtained; discuss in the class and select the most effective solution; complete the work in one or two weeks.

Question: 6. (Activity: egg-protection envelope) Work in groups of 4 to 6 members and make an egg-protection envelope.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: form a group of 4 to 6 students and together make an envelope which saves the egg from breaking.

Question: 7. Arrange as much material as possible, such as a drinking straw, cardboard, tube, small bamboo sticks, sticking tape, glue etc., which can be used for the egg-protection envelope.

Answer: This is a practical activity; it has no single fixed answer. Collect material like this: drinking straws, cardboard, tube, small bamboo sticks, sticking tape and glue — all these things can be used for making the envelope and wrapping the egg.

Question: 8. Using only four of the collected resources, create the state of the egg-protection envelope.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: select only four from the collected things (for example: cardboard, straws, tape, glue) and make a soft and strong envelope around the egg with them.

Question: 9. Remember, you have to try that the egg does not break, but the egg will have to be dropped from at least eight feet above the ground.

Answer: This is a practical activity; it has no single fixed answer. Keep in mind: the envelope should be so strong and soft that the egg does not break even when dropped from a height of eight feet — keep a soft cushion-like protection around the egg.

Question: 10. As a group you will have to decide the role of the use of minimum resources (only 4) and those two members for the state of the egg-protection envelope.

Answer: This is a decision activity; it has no single fixed answer. Complete it like this: the group together decides which four resources will be used and which two members will do which work — make the decision by consensus or by vote.

Question: 11. When each one has completed the plan (or their fixed time ends) then all the groups gather with each other and place a rickshaw to test their egg-protection envelope!

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: when the time ends, all groups gather and one by one drop their envelope from eight feet to test whether the egg survived or not.

Question: 12. In the end discuss the following points: What was your decision? How did you reach your decision? Which method of decision-making did you use (consensus, voting etc.)? How did your decision affect your values, attitudes and prejudices? Who provided guidance in your group? How were displeasures and contradictions controlled? How satisfied are you with your level of participation in this exercise?

Answer: This is a discussion activity; it has no single fixed answer. Complete it like this: each group answers these seven questions — tells its decision, tells the method of decision (consensus or vote), tells the name of the guide, and tells how differences were removed and how satisfied each member is with their participation.

Question: 13. Prepare a chart for presenting the information which you obtained from this exercise and display it on the class bulletin board.

Answer: This is a practical activity; it has no single fixed answer. Complete

it like this: make a chart of the results of the exercise — which group's egg survived, which resources were used, what decision was made — and put it on the class bulletin board.

Unit 6, Ch 3: History Skills

Question: 1. Students think together with the teacher how historians study a historical site. Information can be judged on the basis of the greatest amount of collected information. When a historical site is excavated, pictures of the changes occurring in the land and of pre-historical or remaining industrial samples are taken. After making the samples, they are kept with informative titles, from which it appears where they were received. These steps ensure that a historian can tell where a pre-historical or remaining industrial sample was received and how those samples are related to each other.

Answer: This is an explanatory activity; it has no single fixed answer. The historian's method is like this: at the time of excavating a site, a picture of every sample is taken and the title of the place where it was found is written; from this it is known where the sample was found and what its relation is with other samples; the more information is collected, the better the estimate that can be made.

Question: 2. Holding a pencil in the hand, throw light on this point and ask the class what can be told about the person whose owner it apparently was — apparently only a clue, in fact it can be told. Historians also often feel the same when they are told that examination of a single sample of a pre-historical or remaining industrial sample and its explanation... the person who received more than a group of pre-historical or remaining industrial samples can guess more things about which they were received together.

Answer: This is an explanatory activity; it has no single fixed answer. Its meaning is this: from a single thing (for example a pencil) only a clue

about its owner is obtained, much cannot be told with certainty; but when many things are found together, more things can be understood from them — historians too estimate less from one sample and more from many samples.

Question: 3. Give your guesses to each other, but be sure that no one gets another's copy. Every student can write a list to reveal the owner of human art and industrial samples. After that, every student shows the things in their bag, and suppose that all students are asked to reveal "human art and industrial samples". After that ask the students to suppose who their owners are.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: each student shows the things in their bag and makes a list; the other students guess from those things who the owner of the bag could be (for example: books show interest in studies, sports goods show interest in games); then the real owner tells whether the guess was correct or not.

Question: 4. Guide the discussion about the exercise — why are some bags easier to explain than others? When those people whose results were taken used specific things, how does disagreement arise in human art and industrial samples? How does this historical exercise create difficulty?

Answer: This is a discussion activity; it has no single fixed answer. The answer can be given like this: the bags in which the things are clear and recognisable are easy to explain; those in which things are few or unknown are difficult. Different people's things give different estimates, so disagreement arises — and the history exercise is difficult because the historian has to estimate from incomplete information.

Question: 5. Write a report on the information obtained about the method and results of this exercise, which should not be more than one page.

Answer: This is a written activity; it has no single fixed answer. Write the

report like this: first, the method of the exercise (showing the things in the bags and making guesses); second, the results (which guesses turned out correct and which wrong); third, the lesson (historians too estimate in the same way from incomplete information). Complete the report in one page.

Unit 6, Ch 4: Geography Skills

Question: 1. Working in pairs or groups, match the aerial photographs of the same place with the ground-level photographs.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: keep the aerial photograph and the ground photograph of your school or neighbourhood together; see how the same things (buildings, roads, trees) look in both; in the aerial photograph things appear from above and in the ground photograph from the front.

Question: 2. Record the observations of both photographs like a record sheet of an aerial photograph. Despite this method, students will begin to explain what different types of information can be obtained from aerial photographs, which can be obtained from ground-level photographs.

Answer: This is a practical activity; it has no single fixed answer. Record like this: make two columns on a sheet — What appeared in the aerial photograph | What appeared in the ground photograph; then write that from the aerial photograph the map of a large area and the arrangement of roads is known, while from the ground photograph the height and detail of buildings is known.

Question: 3. Explain to the students and clarify whether they know what cannot be known from aerial photographs / satellite images etc.

Answer: This is a discussion activity; it has no single fixed answer. The answer can be given like this: from an aerial/satellite image the condition inside a building, the names and thoughts of people, and small things cannot be known; for that, ground observation and asking people is necessary.

Question: 4. (Additional activity) An aerial photograph of your school may

already exist, but there are also images in Google Maps. Apart from Google Maps, compare the map of your school's site, the ground map and the satellite image. Start this activity without the aerial photograph of your school so that students become able to make their own map; then put that picture on the board, invite the students and compare your picture with their picture — discuss the similarities and differences.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: first the students make the map of their school themselves; then compare it with the satellite image of Google Maps; write on the board the similarities (place of buildings, roads) and differences (detail, scale) of both pictures.

Unit 6, Ch 5: Continuing Map Study and Interpretation

Question: 1. Study the map and allow the students to complete a message so that they show what they know about that city (urban areas) and settlement (rural settlements).

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: looking at the map of Asia, write where urban settlements are dense (for example: on the banks of rivers and in coastal areas) and where rural settlements are spread; write one or two sentences about each.

Question: 2. Keep the students in groups. Give one group a large sheet of paper on which the word "urban" is written. Give the second group a sheet of paper on which the word "rural" is written. The groups have 30 to 60 seconds for thinking, and after 2 to 3 minutes show their views about that word individually on record paper. After that take the paper back from the groups and repeat the activity. Students can include their pictures in their message, to include their thoughts and questions for ahead in the unit.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: the "urban" group writes the characteristics of a city (big buildings, dense population, factories); the "rural" group writes the characteristics of a village (fields, open space, low population); then both groups exchange their sheets and read each other's views.

Question: 3. Make an equal diagram (Venn diagram) on the board to record the answers of the urban and rural settlements; use wide bands (Hula hoops).

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: make two overlapping circles on the board — in one write only the city's things (factories, big buildings), in the other only the village's

things (fields, animals), and in the middle common part write the common things of both (school, shop, people).

Question: 4. When the students complete the work once, instruct them to write the answers to the following questions on the board: Identify the most important urban and rural settlements from the map; Enter the information obtained from the map in a pie chart; Record your analysis of the settlement patterns; Determine the reasons for the different settlements on the map; Determine the population density after studying the map; Explain the differences in the settlements together with the latitude and longitude of nearby cities.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: select the biggest urban settlements from the map of Asia (for example: coastal and river cities); show their share in a pie chart; write that settlements become dense because of water, fertile land and trade; and write the latitude and longitude of nearby cities to make the differences clear.

Unit 6, Ch 6: Interpretation of Material

Question: 1. (Line graph — daily biryanis of a famous biryani centre in Karachi: 2010 — 150, 2011 — 157, 2012 — 120, 2013 — 270, 2014 — 526, 2015 — 650, 2016 — 480) Mark a date from each column on the vertical axis of the given line graph; from 2010 on the left side to 2016 on the right side. Write the horizontal axis below. Use the left side first... to present the number of biryanis. Use a scale starting from zero; for each... five biryanis... write suitable time for each point.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: write the years (2010 to 2016) on the horizontal axis; write the number of biryanis on the vertical axis (starting from zero with equal intervals, for example each mark 100 biryanis); place the point of its number in front of each year.

Question: 2. The second step is to place a point on the line graph for each year, which shows the number of orders of the central road operation for air operation in that year.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: read the number in front of each year of the table and place the point at the correct place on the graph — 2010: 150, 2011: 157, 2012: 120, 2013: 270, 2014: 526, 2015: 650, 2016: 480.

Question: 3. Join the points with a solid line, give the graph a title, and explain it through the material.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: join all the points with a straight/solid line; write a title on top, for example: "Daily Biryanis of the Karachi Biryani Centre (2010–2016)"; below write in one sentence what the graph shows.

Question: 4. Write a paragraph about the information included in the graph — which most important facts should be kept in mind?

Answer: This is a written activity; it has no single fixed answer. The paragraph can be written like this: "From 2010 to 2012 the number of biryanis remained almost the same (150, 157, 120); after 2013 it increased rapidly and in 2015 became the highest at 650; in 2016 it decreased to 480. The most important fact is that after 2013 there was a big increase in demand."

Question: 5. What is the most important trend of this material?

Answer: The most important trend is that after 2012 the demand for biryanis increased rapidly — from 120 in 2012 to 650 in 2015 — and then there was some decrease in 2016.

Question: 6. What can be the reasons for the annual change of orders?

Answer: This is an opinion activity; it has no single fixed answer. Possible reasons: increase in the fame of the centre, increase in population, change in prices, effect of weather or festivals, and decrease in 2016 because of competition or price increase.

Question: 7. What can be some possible results of this trend for the future demand of biryani?

Answer: This is an opinion activity; it has no single fixed answer. Possible results: if the increase continues, the centre will need more material, more workers and a bigger place; if the decrease continues, there will be a need to reduce the price or improve the quality.

Question: 8. (Vertical bar graph — ice cream sold in months: May about 50, June about 110, July about 330, August about 210, September about 30) Ask the students through voting what their favourite game is.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: ask every student in the class what their favourite game is and

count the votes of each game.

Question: 9. Compare the number of votes with each other, and write the results on the board.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: count the votes of each game and write them on the board — for example: cricket 12, football 8, hockey 5 — and see which game got the most votes.

Question: 10. Using the material of the board, make a vertical bar graph of the favourite games.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: write the names of the games on the horizontal axis; write the number of students on the vertical axis; make a bar for each game as high as its votes.

Question: 11. Show a copy of the blank vertical bar graph sheet in front of the students so that they see.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: show the students a blank graph sheet on which only the axes and boxes are made, so that they can make the bars themselves.

Question: 12. Write the names of the games below.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: write the name of each game below the horizontal axis of the graph — for example: cricket, football, hockey, badminton.

Question: 13. Point to the lower side of the graph and ask what title should be on it (on the games).

Answer: This is a practical activity; it has no single fixed answer. Answer: there should be a title below the graph, for example: "Our Favourite Games".

Question: 14. Draw a line under the names of the games and write the

names of the games.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: write the name of the game below each bar so that it is known which game each bar is of.

Question: 15. Point to the left side of the graph and instruct the students to give them a title.

Answer: This is a practical activity; it has no single fixed answer. Answer: there should be a title on the left side of the graph (vertical axis), for example: "Number of Students".

Question: 16. Write the number of students on the left side of the graph.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: write the numbers on the vertical axis starting from zero with equal intervals — 0, 2, 4, 6, 8, 10 — so that the height of each bar can be measured.

Question: 17. Ask questions about the graph to test the understanding of it — for example: Which game is liked the most? How many people like cricket?

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: answer by looking at the graph — the game with the tallest bar is liked the most; the height of the cricket bar tells how many students like cricket (according to the votes of your class).

Question: 18. Instruct the students to complete the vertical graph according to their choice.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: each student completes the graph by making the bar of their favourite game as high as the number of its votes.

Question: 19. (Pie chart — "What we ate yesterday": meat 43%, ice cream 29%, vegetables 14%, double roti 14%) Using the above material, make a

pie chart from the ratio of the discovered human art and industrial samples of the Iranian civilisation.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: find the share of each type of sample in the total number from the museum table (share = number of that type ÷ total number × 100); make a slice of the circle equal to each share; for example in the book's "What we ate yesterday" pie chart, meat is the biggest share (43%).

Question: 20. You can also give different colours to the different human art and industrial samples.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: give a separate colour to each slice of the pie chart and write in the colour key (legend) beside it which colour is of which type of sample.

Question: 21. (Pictograph — ice-cream cones sold: Monday 4, Tuesday 2, Wednesday 3, Thursday 5, Friday 7, Saturday 1) Go out of the school with your students for a walk and make a balanced graph of your plan. Before your tour, think about those interesting things which you can see and observe them to organise a balanced graph. During the walk keep your balanced graph with you and write your observations and coming things in it. After that, analyse the collected material. Answer these ten questions: 1. How many birds did you see? 2. How many cats did you see? 3. How many more flowers than trees did you see? 4. How many dogs did you see? 5. How many buildings did you see? 6. How many people working in the agricultural land did you see? 7. How many kinds of trees did you see? 8. How many vehicles used for transport did you see? 9. What did you see the most? 10. What did you see the least?

Answer: This is a field activity; it has no single fixed answer — the answers depend on each class's own observations on the walk. Complete it like this: during the walk count each thing and put a tally; on return see which

thing was seen the most and which the least; show those counts in a pictograph (each picture equal to one thing).

Question: 22. (Activity: Make a pictograph) Instruct your students to convert the material of their balanced graph into a pictograph and exchange it with other students.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: convert your tally counts into pictures — for example make one bird picture for each bird seen; then exchange your graph with other students and see each other's observations.

Unit 6, Ch 7: Violence

Question: 1. (Activity) Make two groups of children in the class. Write about those children of your school with whom you had a quarrel. During the school break, what was your behaviour with them and what was the behaviour of those children during that time?

Answer: This is an activity; it has no single fixed answer. Complete it like this: write your quarrel incident truthfully — on what thing the quarrel happened, what you did, what the other child did; in the end write how the problem could have been solved peacefully instead (for example: conversation, telling the teacher, asking forgiveness).

Question: 2. (End-of-chapter exercises — answer the questions) (i) Explain violence and its types.

Answer: Violence is that behaviour in which, remaining in the status of a person or an institution, harm — physical, mental or sexual — is caused to another through the use of force. Whether violence is intentional or unintentional, it is a serious violation of basic human rights. It has three types: physical violence, mental violence and sexual violence.

Question: 3. (ii) How can one be saved from violence?

Answer: To be saved from violence it is necessary to develop the ability to refuse along with those behaviours; if a person asks you to do something which does not seem proper to you, refuse, shout, run away from there or go to a safe place, and definitely talk to a person whom you trust. Besides this, recognise the difference between good touch and bad touch and never hide a bad touch.

Question: 4. (iii) What are the effects falling on a person affected by violence?

Answer: On a person affected by violence fall physical effects (feeling of shame, feeling of guilt and self-confidence, hurting of self-respect, feeling of disappointment, feeling of worry and fear, feeling of anger/displeasure) and mental effects (thoughts of harming oneself, not getting sleep, becoming restless, laziness in work, difficulties arising in relations, and feeling of restlessness or loneliness in living among other people).

False: 5. (Identify correct and incorrect) (i) It is not possible to escape violence.

False: 6. (ii) There is no concept in a person affected by violence.

True: 7. (iii) For escaping violence it is necessary that a person develops the ability to refuse in himself.

8. (Fill in the blanks) (i) A person affected by violence should definitely talk about it with a person on whom he has _____.

Answer: trust.

9. (ii) Protection from violence is the basic a right. of every human.

Question: 10. (Use your research/investigation skills) For your protection and to avoid any harm, inform your parents, sisters and brothers about these things and share these things with your younger sisters/brothers and friends.

Answer: This is a practical activity; it has no single fixed answer. Complete it like this: tell your parents and siblings the information from Chapter 7 about the types of violence, its effects and the ways of escaping (refusing, shouting, running away, telling a trusted person, difference between good touch and bad touch) and also explain it to younger siblings/friends.

Unit 6 End Exercises

1. (Evaluate your information and understanding — fill in the blanks) (i) The act of taking photographs of the ground level from a high place is called _____.

Answer: aerial photography (taking aerial pictures).

2. (ii) Those special methods of skill in which students are expected to play a role in the idea of learning the manners and etiquette of the class are called _____.

Answer: supporting skills.

3. (iii) The practical method of collecting information, combining the alternatives of decisions and identifying them through the selection of a decision is called _____.

Answer: decision-making.

4. (iv) That method of presenting numerical material in which material of different types is compared for comparison of counting, the use of pictures in it is called _____.

Answer: a pictograph (picture graph).

5. (v) The two types of vertical line graph are _____ and _____.

Answer: forms taught, for showing material.

Question: 6. (Answer the following questions) (i) Explain ortho-photo.

Answer: An ortho-photo map is that map which is made by correcting aerial photographs (removing the slant of their edges and the difference of height), so that it shows correct measurement and correct place like an ordinary map. According to Chapter 4, the process of comparing and correcting different aerial photographs is called photogrammetry.

Question: 7. (ii) What do you understand by mutual supporting skills? Why

do you think they are important for students like you?

Answer: Mutual supporting skills are those methods by which students work together — cooperating with one another, conversing, listening to one another's talk, and working for a common aim. They are important for students like us because through them we learn together, learn from one another, and learn to fulfil shared responsibility.

Question: 8. (iii) Why do you think that decision-making skills help in developing critical thinking in students and in showing their views to others? Write your answer.

Answer: Decision-making skills include identifying the problem, collecting information, considering alternative solutions and selecting the best solution. Through this, students learn to examine every matter thoughtfully (critical thinking) and learn to place their views before others with arguments.

Question: 9. (iv) Make a list of the elements of the rural-urban settlement map — why do you think they are different from other types of maps?

Answer: Elements of the rural-urban settlement map: settlements (cities and villages), roads and transport routes, rivers and water sources, fertile land, latitude and longitude, and the key of the map (explanation of symbols). They are different from other types of maps because they show, instead of the shape of the land, the residence of people and the spread of settlements.

Question: 10. (v) What is the difference between a line graph and a pie chart? Using the material of your class, make at least three graphs.

Answer: In a line graph, change with time is shown with a line (for example: the number of biryanis year by year); in a pie chart, the total quantity is divided into slices of a circle and the share of each part is shown (for example: meat 43% in food). Make three graphs from the

material of the class like this: (1) a vertical bar graph of the students' favourite games; (2) a line graph of month-wise attendance; (3) a pie chart of the favourite food of the students of the class.

Question: 11. (Use your research/investigation skills) In small groups of four students, investigate the natural resources available in your school, for example furniture, cold drinking water, sports goods — conduct a research to search for other resources and tools. After that, make a pie chart or a pictograph and exchange the information with your class and paste it on the board of your class.

Answer: This is a research activity; it has no single fixed answer. Complete it like this: a group of four students makes a list of the school's resources (furniture, water, sports goods, books) and counts each type; then makes a pie chart or pictograph from those counts, presents it before the class and pastes it on the board.

Question: 12. (Cooperate with others) Conduct a survey in your school and organise at least three common problems which students like you have to face — students collectively... to help solve the problems... use problem-solving and decision-making skills, form an action committee, study the problem in this chapter, after that make a poster on the causes and solution of the problem and publish it in the school newsletter or children's newspaper.

Answer: This is a group activity; it has no single fixed answer. Complete it like this: select three common problems from the survey (for example: cleanliness, shortage of water, lack of a playground); form an action committee with the steps of problem-solving (identify the problem, collect information, think of alternative solutions, select the best solution); make a poster of the causes and solution and publish it in the school newsletter.
